

1. The thirteenth letter and tenth consonant in the English alphabet. It had a corresponding position in the Latin and Greek alphabets, and in their source, the Phœnician. The consonants of forms in these three alphabets, with the Egyptian characters from which many believe the M to be derived (see A), is as follows.

wants a labial nasal sound, the corresponding nasal p, as n to d and t, and m to g and k. That is to say, the production of the lips are pressed together, or p, which bite closure, as in p and b, and the vocal chords vibrate, as in b, but the passage from the nose into the mouth is open, so that the tone rings out as well as in the oral cavity, and this gives the labial quality which we term nasal. (See nasal.) The nose is incapable of complete closure (except by external means, as the fingers), the sound thus produced is resonant and continuous, and hence m and n are ordinarily reckoned as semi-vowels, or liquid, or the like. But m does not win, like n, an actual vowel value in English syllabification, though in vulgar pronunciation words like *man, woman, etc.*, are sometimes resolved into *ai-man, opai-man, etc.* The sound m, especially as initial, is a very stable element in Indo-European language history compare *man¹, māt¹, Latin mens, Greek μένος, Sanskrit y-man, or mother, oldest traceable form māt¹ (compared with the altered father, brother, oldest pāt¹, bhrāt¹). M has no varieties of pronunciation, and is silent only in a few foreign words, as *mnemonic*, it is doubled under the same circumstances as the consonants in general, as in *dimmer, dimming, dimmed, etc.*, from *dēm*.*

2. As a numeral, in the Roman system, M denotes 1,000. With a dash or stroke over it ($\overline{M}$), it stands for a thousand times a thousand, or 1,000,000.—3. As a symbol: (a) In the mnemonic words of logic (see *mood²*), m indicates a transposition (metathesis) of the premisses in the reduction. (b) Formerly, M was a brand impressed on one convicted of manslaughter and admitted to the benefit of clergy.—4. As an abbreviation. (a) In titles, M stands for *Magister* or *Master*, as in A. M.; for *Medicine* or *Medicine*, as in M. D.; or for *Member*, as in M. C., member of Congress, and M. P., member of Parliament. (b) In *mech.*, m stands for *molar*. (c) In dental formulae, in *zool.*, m. stands for *molar*, and *dm.* for *deciduous molar*. (d) In *math.*, M or m stands for *modulus*, in *higher geom.*, m or μ for the degree of a curve. (e) In *astron.* and *metrol.*, m. stands for *minute* (of time), and for *meter*; mm for *millimeter*; and μ for *micron* or *micromillimeter*. (f) In *musical notation*, M. stands for *mano* (*main*), *mz'o*, *metronome*, and in organ-music for *manual*. See *M. D.*, *M. M.*, *M. S.* (g) In a ship's log-book, m. is an abbreviation of *mist*.—5. In *printing*, the square or quadrate of any body of type: more commonly spelled out, *em* (which see).—To have an M under (or by) the girl's, to have the courtesy of addressing by the title Mr., Miss, Mrs., etc., show due respect by using the titles Mr., Mrs., etc. [Colloq.]

mab (mab), v. t. ; pret and pp mabbed, ppr. mabbing [A dial var. of *mobi¹*, of *mab, n.*] To dress negligently; be slatternly [Prov Eng.]

Maba (mā'ba), n. [NL. (J. R. Forster, 1776), the name of the plant in Tonga-Tabu.] A genus of dicotyledonous gamopetalous plants belonging to the natural order *Ebenaceæ*, the ebony family, characterized by diuccous flowers, almost always three-parted, from three to an indefinite number of stamens, and three styles, sometimes united below. They are shrubs or trees, usually of very hard wood, with small entire leaves, and flowers either solitary or in cymes. Fifty nine species are known, natives of the warm regions of the globe. The ebony wood of Cochinchina and Comorand is believed to be the product of a tree of this genus. *M. geminata* and *M. laurina*, called *Queensland ebony*, furnish with other species of the region, desirable substitutes for ebony. *M. burzobua* has been called *Raw Indian mahogany*. The genus is found in a fossil state in many Tertiary deposits, the fruiting calyx on its peduncle being all that is usually preserved. Eight species are thus known. They have been described under the name *Macropithecus*, now regarded as a section of *Maba*. One of these fossil species occurs in Colorado.

mabbie¹, v. t. A variant of *moble²*

mabby (mab¹), n. [Formerly also *mobby*, Barbados.] A spirituous liquor distilled from potatoes in Barbados.

Mac [< Gael *mac* = Ir. *mac* = W. *map*, m. b, also *ap*, *ab*, a son, = Goth *magus*, a son see *magus²*. (f ap)] An element, usually a conjunct prefix, in many Scotch and Irish names of Celtic origin, cognate with the Welsh *ap*, signifying 'son,' and being thus equivalent to the Irish *O'*, the English *-son* or *-s*, and the Norman *Fitz*. The prefix is either written in full, *Mac*, or abbreviated to *Mc* or *M'*, which in works printed in the British Isles almost invariably appears as *M'*—the contracted form being followed by a capital letter, while *Mac* takes a capital after it but rarely. Thus a name may be variously spelled as *Macdonald* (rarely *Macdonald*) *M'Donald*, or *McDonald*, so *Mackenzie*, *M'Kenzie*, or *McKenzie*, etc. In catalogues, directories, etc., names with this prefix whether written *Mac*, *M'*, or *Mc*, are commonly entered in the alphabetical place of *Mac*. Sometimes used separately for persons whose names begin with this prefix.

The Fitzes sometimes permitted themselves to speak with scorn of the Os and *Mac*, and the Os and *Mac* sometimes repaid that scorn with aversion. *Macaulay*

Macaberesque (ma-kā-bér-esk'), a [< *Macaber* (see def.) + *-esque*. Cf. ML. *Machabæum chona*, as if the 'dance of the Macabees'.] Pertaining to or of the character of the so-called "Dance of Death," a favorite subject in the literature, art, and pantomime of Europe in the middle ages and early Renaissance, apparently based on a series of dialogues of death attributed to Macaber, an old German poet of whom nothing is known. See *dance of death*, under *dance*.

macaco¹ (ma-kā'kō), n. [Formerly also *macauco*, *macosk*; from a Malagasy name.] 1. The ring-tailed lemur or cat-lemur, the species of *Lemur* earliest known, described under this name by Buffon; the *L. catta* of Linnaeus.—2. The technical specific name of the ruffed lemur, *L. macaco*. Hence.—3. Any lemur; a maki.—

4. The so-called yellow lemur or kinkajou, *Cercoleptes cantholobus* a misnomer. See *ent* under *kinkajou*.

macaco² (ma-kā'ko), n. [Formerly *macaque* (Maregrave, 1648), said to be of African (Congo) origin. See *macaque*, *Macacus*.] A macaque. See *Macacus*.

macaco-worm (ma-kā'ko-worm), n. The larva of a dipterous insect of South America, *Dermatobia noxialis*, which infests the skin of animals including man.

Macacus (ma-kā'kus), n. [NL. (F. Cuvier) (*Macaca*, Lacépède, 1801), < F. *macaque* (Buffon), from a native name, *macaco*—see *macaco²*.] A genus of Old World catarrhine monkeys of the family *Cercopithecoidea* or *Cynopithecoidea*, the macaques. The genus formerly included monkeys between the donkeys (*Semnopitheci*) and the baboons or drill (*Cynocephalines*). It was next restricted to species inhabiting the East Indies having cheek pouches, facial callosities, and a fifth tubercle on the back molar, such as the wauweroo (*M. silenus*), the bonnet macaque (*M. sinicus*), the rhous monkey (*M. rhinus*) the common toque (*M. cynomolgus*), etc. It is now restricted to species resembling the last-named. The leading genera which have been dissociated from *Macacus* are *Cercocebus*, *Inuus*, *Theropithecus*, *Cynopithecus*, and *Cerapithecus*.

macadam (mak-ad'ām), n. [Short for *Macadam pavement*—see *macadamize*.] Macadamized pavement.

There are many varieties of pavement in London, from primitive *macadam* to the noiseless asphalt.

Contemporary Rev., LIV 432.

Macadamia (mak-a-dā'mi-ā), n. [NL. (F. von Müller, 1857), named after one Mac Adam.] A genus of dicotyledonous apetalous plants belonging to the natural order *Proteaceæ* and the tribe *Coccolleæ*, characterized by having two pendulous ovules, seeds with unequal and fleshy cotyledons, anthers on short filaments inserted a little below the lunula and a ring-like four-lobed or four-parted disk. There are two species, found only in eastern Australia. They are tall shrubs or trees with whorled leaves, either entire or serrate, and flowers pedicellate in panicles. In terminal or axillary racemes the pedicels not connate. *M. ternstrofi* is the Queensland nut tree, a small tree with dense foliage, a firm, fine grained wood and an edible nut with the taste of hazel, an inch or more in diameter.

macadamization (mak-ad'āmi-zā'shon), n. [< *macadamize* + *-ation*.] The process of laying carriage-roads according to the system of John Loudon Macadam, a Scottish engineer (1756-1836), who carried it out very extensively in England. In the common process the top soil of the roadway is removed to the depth of 14 inches. Coarse cracked stone is then laid in to a depth of 7 inches, and the interstices and surface depressions are filled with fine or raked stones. Over these as a bed is placed a layer 7 inches deep of road metal or broken stone, of which no piece is larger than 2½ inches in diameter. This is rolled down with heavy steam or horse rollers and the top is finished with stone crushed to dust and rolled smooth. Also spelled *macadamisation*.

macadamize (mak-ad'āmi-z), v. t. pret and pp. *macadamized*, ppr. *macadamizing* [< *Macadam*, the name of the inventor, + *-ize*.] The F. *macadamiser* is from L.] To cover (a road or path) with a layer of broken road-metal. See *macadamization*. Also spelled *macadamise*.

macadamizer (mak-ad'āmi-zér), n. One who lays macadamized roads. Also spelled *macadamiser*.

Macaja butter. See *locos*.

macaque (ma-kā'k'), n. [< F. *macaque*, < *macaco*, *macaque*, a native name—see *macaco²*, *Macacus*.] A monkey of the genus *Macacus*; one of the several kinds of monkeys coming between baboons and the African mangabeys. The term has undergone the same restriction of meaning as *Macacus* and most of the macaques, in a former sense of the word, have received special names. The Javan macaque, *M. cynomolgus* with beelling brows and tall about as long as the body, is a fair example of the arboreal forms. The mungo, *M. sinicus* of India, is known as the bonnet-macaque, from the top knot which parts in the middle. The bandar, or rhous macaque, *M. rhinus*, is a very common Indian species. The bruli, or pig-tailed macaque, *M. nemestrinus*, is a long limbed form inhabiting the Philippines, with the tail of moderate length. In the Borneo black

macaque, *M. maurus*, the tail is a mere stump. Some of these monkeys reach the snow-line in Tibet, as *M. thibetanus*. A remarkable species, the wanderer, *M. silenus*, with a tufted tail and the face set in an enormous frill of long gray hair, inhabits Malabar. Sometimes spelled *macaca*.

Macaria (mā-kā'ri-ā), *n.* [NL., < Gr. *μακάριος*, *makap*, blessed, happy.] In *zool.*, a name of various genera. (a) A genus of spiders. Koch, 1795. (b) The typical genus of *Macaridæ* or *Macariniæ*, erected by Curtis in 1838. They are delicate, slender bodied moths of grayish color, whose larvæ are slender with heart shaped head. It is a large and wide spread genus, occurring abundantly in Europe and America. *M. bistorta* is the larvæ barred angle of English collectors, to whom *M. notata* is known as the small peacock moth. (c) A genus of lady birds or coccinellids, confined to South America, having the third and fifth joints of the antennæ very small. Also *Macaria*. Dejean, 1844.

Macarian (mā-kā'ri-an), *a.* [*< Macarius* (see def.)] (*< Gr. μακάριος*, blessed) + *-an*.] 1 A follower of the monastic system or customs of the elder Macarius of Egypt, or of the younger Macarius of Alexandria, contemporary monks of the fourth century, who were noted for their severe asceticism.—2 A follower of the Monothelite Macarius, patriarch of Antioch in the seventh century.

Macaridæ (mak-a-rī'd-ē), *n. pl.* [NL., < *Macaria* + *-idæ*.] A family of geometrid moths, typified by the genus *Macaria*. Also called *Macaridæ*. They are also classed as a subfamily, *Macarina*, of *Geometridæ*.

macarism (mak-a-riz-in), *n.* [*< Gr. μακαρισμός*, blessing, *makap*, blessed.] A beatitude. *J. A. Alexander*, Commentary on Matthew, p. 110.

macarize (mak-a-riz), *v. t.*; pret and pp *macarized*, pp *macarizing*. [*< Gr. μακαρίζω*, bless, pronounce happy, *makap*, blessed, happy.] To bless; pronounce happy; wish joy to, congratulate. [Rare.]

The word *macarize* has been adopted by Oxford men who are familiar with Aristotle, to supply a word wanting in our language. "Felicitate" and "congratulate" are (in actual usage) confined to events. It may be said that men are admired for what they are, commended for what they do, and *macarized* for what they have. *Whately*, On Bacon's Essay on Praise (ed. 1887).

macaroni (mak-a-rō'n-i), *n.* and *a.* [Formerly also *macaroni*, *macaroni*, *macaroni*, = *F. macaroni* = *Sp. macarrones* = *Pg. macarrão*, < OIt. *macaroni*, It. *maccheroni*, *macaroni*, orig. a mixture of flour, cheese, and butter, prob. *< mac-care*, bruise, batter, < *L. macerare*, *macerate*; see *macerate*. Cf. *macaroon*, from the same source. In ref. to the secondary uses of the word (cf. It. *maccherone*, now *maccherone*, a fool, blockhead), it is to be noted that it is common to name a droll fellow, regarded as typical of his country, after some favorite article of food, as E. *Jack-pudding*, G. *Hanvorst* ('Jack Sausage'), F. *Jean Farine* ('Jack Flour').] *I. n.* 1 A kind of paste or dough prepared, originally and chiefly in Italy, from the glutinous granular flour of hard varieties of wheat, pressed into long tubes or pipes through the perforated bottom of a vessel furnished with mandrels, and afterward dried in the sun or by low heat. The same material called *Italian paste*, is also made into a thread like product called *vermicelli*, and into sticks, lozenges, disks, ribbons, etc. *Macaroni* cooked in various ways, constitutes a leading article of food in Italy, especially in Naples and Genoa, and it is much used elsewhere. Imitations of it are made in other countries from ordinary flour, which is much less suitable.

He doth learn to make strange sauces, to eat anchovies, *macaroni*, *bovelli*, *fagioli*, and *caviare*.

B. Jonson, Cynthia's Revels, II. 1

macaronic (mak-a-rō'n-ik), *a.* and *n.* [= *F. macaronique* = *Sp. macarrónico* = *Pg. macarrónico* = It. *maccheronico*, as *macaroni* + *-ic*.]

I. *a.* 1. Of or pertaining to the food *macaroni*.—2. Pertaining to or like a *macaroni* or fop, hence, trifling, vain, affected.—3. In lit., using, or characterized by the use of, many strange, distorted, or foreign words or forms, with little regard to syntax, yet with sufficient analogy to common words and constructions to be or seem intelligible as, a *macaronic* poet, *macaronic* verse. Specifically, *macaronic* verse or poetry is a kind of burlesque verse in which words of another language are mingled with Latin words, or are made to figure with Latin terminations and in Latin constructions. The term was brought into vogue by the popular satirical works in this style of the Mantuan Teofilo Folengo (died 1544). It is probable that this use of the word has reference to the varied ingredients which enter into the preparation of a dish of *macaroni*.

A *macaronic* stage seems very often to mark the decline of an old literature and language, in countries exposed to powerful foreign influences.

2. A follower of Macedonius, Bishop of Constantinople in the fourth century, who denied the distinct existence and Godhead of the Holy Spirit, which he conceived to be a creature or merely a divine energy diffused through the universe. Members of this sect were also known as *Marathonians* and *Pneumatomachi*. The Semi Arians were often called by this name, and the name of Semi Arians was also given to the Macedonians in the proper sense.

Macedonianism (mas-ō-dō'n-an-izm), n. [*L. Macedonianus*, 2, + *-ism*.] The doctrines peculiar to Macedonius, Bishop of Constantinople in the fourth century; the denial of the divinity of the Holy Spirit. The second ecumenical council (see *Constantinopolitan*) was summoned mainly to combat this heresy. See *Macedonian*, n. 2.

Macellodon (mā-sel'ō-don), n. [*NL.*, < *Gr. μάλα*, a pickaxe, + *ὄδον* (*ōdon*) = *E. tooth*.] A genus of lacertilians described by Owen (1854) from remains found in the Purbeck beds, of Jurassic age, and regarded as one of the earliest forms of true *Lacertina*. Also *Macellodus*.

Mace Monday (mās mun'dā) The first Monday after St. Anne's day: so called in some

places on account of a ceremony then performed. *Hallwell*. [Prov. Eng.]

macer (mā'sér), n. [*ME. macere*, < *mace*, a mace: see *mace*¹.] A mace-bearer; specifically, in Scotland, one of a class of officers who attend the courts of session, teinds, judiciary, and exchequer, to keep order, call the rolls, serve the judges, make arrests when required, etc.

macerate (mas'e-rāt), v. t., pret and pp. *macerated*, ppr. *macerating*. [*L. maceratus*, pp of *macerare* (> *It. macerare* = *Pg. Sp. Pr. macerar* = *F. macérer*), make soft or tender, soften by steeping, weaken, harass, prob. akin to *Russ. mochit*, steep, *Gr. μάσσειν*, knead. Cf. *mass*², *macaroni*, *macaroon*, ult. from the same root.] 1. To steep or soak almost to solution, soften and separate the parts of by steeping in a fluid, usually without heat, or by the digestive process. as, to *macerate* a plant for the extraction of its medicinal properties; food is *macerated* in the stomach. — 2. To make lean; cause to grow lean or to waste away.

Recurrent pains of the stomach, migrains, and other recurrent head-aches *macerate* the parts and render the looks of patients consumptive and pining.

Harvey, Consumptions. What is the difference in happiness of him who is *macerated* by abstinence and his who is surfeited with excess? *Steele*, Spectator, No. 282.

3. To harass or mortify; worry, annoy.

Now the place [Paradise] cannot be found in earth, but is become a common place in mens brains, to *macerate* and vex them in the curious search hereof. *Purchas*, Pilgrimage p. 18.

They are neither troubled in conscience nor *macerated* with cares. *Burton*, Anat. of Mel., p. 110.

maceration (mas-e-rā'shon), n. [= *F. maceration* = *Sp. maceración* = *It. macerazione*, < *L. maceratio* (n.), < *macerare*, steep, *macerate* see *macerate*.] 1. The act, process, or operation of softening and almost dissolving by steeping in a fluid. See *macerate*, 1 — 2. The act or process of macerating or making lean or thin, the state of being macerated, leanness.

The faith itself retaineth the use of fastings, abstinences, and other *macerations* and humiliations of the body, as things real, and not figurative. *Bacon*, Advancement of Learning, II 185.

For about two centuries the hideous *maceration* of the body was regarded as the highest proof of excellence. *Lecky*, European Morals, III 114.

macerator (mas'e-rā-tor), n. [*Gr. macerate* + *-or*.] Any suitable vessel in which substances are macerated.

mace-reed (mās'rēd), n. Same as *reed-mace*.

maces, n. A Middle English form (singular) of *mace*².

macfarlanite (mak-far'lan-it), n. [Named after T. Macfarlane.] A silver ore found in the mines of Silver Islet, Lake Superior. It contains chiefly silver and arsenic, with some cobalt, nickel, etc., but it is not a homogeneous mineral.

macgillp, n. An obsolete form of *magpie*.

Machærium (mā-kē'ri-um), n. [*NL.* (Persoon, 1807), < *Gr. μάχαρμα*, a sword, saber.] 1. In bot., a South American genus of leguminous plants belonging to the suborder *Papilionaceae*, the tribe *Dalbergieae*, and the subtribe *Pterocarpeae*, probably so named from the shape of the fruit. It is characterized by versatile anthers, opening longitudinally, a calyx obtuse below, and a legume with one seed at the base, the upper part tapering into a reticulated wing which is terminated by the style. They are erect trees or shrubs, or sometimes tall climbers, with unequally pinnate leaves, and usually small white or purple flowers fasciated at the axils or in terminal panicles. About 60 species have been described, some of which are supposed to yield a portion of the rosewood of commerce. *M. Schomburgkii*, a species of British Guiana, produces the beautiful streaked *Itaka* or tiger-wood. See *Itaka wood*.

2. In entom., a genus of dipterous insects. *Halden*, 1831 — 3. In ichth., same as *Congrogadus*, to which the name was changed in consequence of its preoccupation in entomology. *Richardson*, 1843.

machærodont (mā-kē'rō-dont), a. [*Gr. μάχαρμα*, a sword, saber, + *ὄδον* (*ōdon*) = *E. tooth*.] Saber-toothed, having teeth of the pattern of those of the genus *Machærodus*.

Machærodontinae (mā-kē'rō-dont-tī'nē), n. pl. [*NL.*, < *Machærodus* (-odont-) + *-inae*.] A subfamily of *Felidae*, including fossil forms from Miocene and later formations, having the upper canine teeth enormously developed, falcate and trencant, and the lower canines correspondingly reduced; the saber-toothed tigers.

Machærodus (mā-kē'rō-dus), n. [*NL.*, < *Gr. μάχαρμα*, a sword, saber, + *ὄδον* = *E. tooth*.] The typical genus of *Machærodontinae*. Also *Machærodus*. *Kaup*, 1833. See *out under saber-toothed*.

Machæropterus (mak-ē-rop'te-rus), n. [*NL.*, < *Gr. μάχαρμα*, a sword, saber, + *πτερον*, a wing.] A singular genus of South American manikins, of the family *Pyrrhidae*. It is characterized by an abnormal structure and disposition of the secondary remiges, the shafts of which are thickened and ensiform to a varying degree. *M. delacourii* is an example.

Machærodus (mā-kē'rō-dus), n. See *Machærodus*.

machecole, v. t. [*ME. macherolen*, *magecollen*, < *OF. machecoller*, *machecouler*, *machicolate* see *machicolate*.] To machicolate.

Wel machecollid al abouts.

macheronit, n. An obsolete spelling of *macaroni*.

machete (mā-chā'tā), n. [*Sp.*, a chopping-knife, a cutlas.] 1. A heavy knife or cutlas used among Spanish colonists and in Spanish-American countries, both as a tool and as a weapon.

He cut his way through a tangled forest by the use of the Cuban *machete*. *See Amer.*, N. S., LVI 391.

2. A fish of the family *Congrogadidae*, the *Congrogadus* (or *Machærium*) *subduncus*.

Formerly also *matichet*, *matichette*.

Machetes (mā-kē'tōz), n. [*NL.*, < *Gr. μάχητης*, a fighter, < *μάχεται*, fight.] A genus of *Sceloporidae*, named by Cuvier in 1817. *M. pugnax* is the ruff, which in the breeding season has the face papillose and the neck befrilled with an enormous ruff of feathers. The female is known as the *ween*. An older name of the genus is *Pavonocella* (Leach, 1816), the oldest is *Philonachus* (Mœhring, 1752). See *ruff*.

Machiavellian (mak'i-a-vel'i-an), a and n. [Also *Machavellian*, *Machavellian*, *Machavellian*, < *Machavel*, *Machavelli* (see *def.*), + *-ian*.] 1. a. Of or pertaining to Niccolò Machiavelli (also called in English Machiavel) (1469–1527), an illustrious Italian patriot and writer, secretary of state and many times ambassador of the republic of Florence, conforming to the principles imputed to Machiavelli (see II), hence, destitute of political morality, cunning in political management, habitually using duplicity and bad faith, astutely crafty.

II. n. One who adopts the principles expounded by Machiavelli in his work entitled "The Prince," a treatise on government in which political morality is disregarded and tyrannical methods of rule are imputed.

Machiavellianism (mak'i-a-vel'i-an-izm), n. The principles or system of statesmanship of Machiavelli, the political doctrines attributed to Machiavelli — namely, the pursuit of success at any price, and the systematic subordination of right to expediency (see *Machiavellian*, n.), the theory that all means may be justifiably employed, however unlawful and treacherous in themselves, for the establishment and maintenance of the authority of the ruler over his subjects; political cunning and unscrupulous artifice.

machicolate (mā-chik'ō-lāt), v. t., pret and pp. *machicolated*, ppr. *machicolating*. [*ML. machicolatus*, pp of **machicolare*, *machicollare*, < *OF. machecoller*, *machecouler*, *machecoller*, etc., furnish with a projecting gallery, < *machecolre*, *machecolre*, *machecolre*, a projecting gallery. See *machicolous*.] To form with machicolations.

machicolation (mā-chik'ō-lā'shon), n. [*ML. machicolatio* (n.), < **machicolare*, *machicollare*, *machicollare* see *machicolate*.] 1. In medieval arch., an opening in the vault of a portal or passage, or in the floor of a projecting gallery, made for the purpose of hurling missiles, or pouring down molten lead, hot pitch, etc., upon an enemy essaying to enter or mine. In the gallery type machicolations are formed by setting out the parapet or breastwork, B, supported on corbels, beyond the face of the wall, G, spaces between the corbels are left open, and constitute the machicolations. (See *cut on following page*) Machicolations of permanent construction in stone were not introduced until toward the end of the twelfth century, but in the hoarding of wood with which walls and towers were crowned in time of need from the earliest period of the middle ages, their use was constant.

2. The act of hurling missiles or of pouring burning liquids upon an enemy through apertures such as those described above. — 3. By extension, a machicolated parapet or gallery, or a projection supported on corbels, in imita-

Perhaps akin to *AS. macian*, *E. make* see *make*]. *Of mechanics*, etc.] 1 An engine, an instrument of force. With inward arms the dire *machine* [wooden horse] they load. *Dryden, Æneid*, ii 26

2. In *mech.* in general, any instrument for the conversion of motion. Thus, a machine may be designed to change rapid motion into slow motion, as a crow bar, or it may be intended to convert a reciprocating rectilinear motion into a uniform circular motion etc. The lever, the wedge, the wheel and axle, the pulley, the screw, and the inclined plane are termed the *simple machines*. In practical mechanics the word has a restricted meaning: a single device, as a hammer, chisel, crowbar, or saw, or a very simple combination of moving parts, as tongs, shears, pliers, etc. for manual use, although comprised in the strict technical definition of *machine*, is always called a *tool* (which see), a device for applying or converting natural molar motion, like that of falling water, or of winds (as a water wheel or windmill), or for converting molecular motion into molar motion (as a steam engine, gas engine, air engine, or electric engine), is more generally,

though not uniformly, called a *motor*. The distinction between the words *tool* and *machine* becomes quite indefinite with increased complication of parts. Such machines as are used in shaping materials in the construction of the parts of other machines, and many of those which perform work, such as sawing, boring, planing, riveting, etc., formerly done only by hand and still performed manually to a greater or less extent, are variously called *machines*, *machine tools*, *engine tools*, or simply *tools*, although their structure may involve much complexity, the terms *machine-tool* and *engine tool* are more frequently employed, the latter being preferable as being more in accord with best usage. Machines receive general or special names from the work they perform or are designed to execute, either with reference to departments of the arts or of industry, as *agricultural machines*, *hydraulic machines*, *wood working machines*, etc., or to their specific work, as *planting machines*, *sawing-machines*, *moving-machines*, etc.

This science will define a *machine* to be, not, as usual, an instrument by means of which we may change the direction and intensity of a given force, but an instrument by means of which we may change the direction and velocity of a given motion. *Amperé*, tr. by Willis.

3 A vehicle or conveyance, such as a coach, cab, gig, tricycle, bicycle, etc. [Great Britain]

A pair of bootkins will set out to-morrow morning in the *machine* that goes from the Queen's Head in the Gray's Inn Lane. *Walpole, Letters*, IV 12. (*Davies*)

He had taken a seat in the Portsmouth *machine*, and proposed to go to the Isle of Wight. *Thackeray, Virginians*, lxi

4 A fire-engine [Colloq., U.S.]—5. In the ancient theater, one of a number of contrivances in use for indicating a change of scene, as a rotating prism with different conventional scenery painted on its three sides, or a device for expressing a descent to the infernal regions, as the "Charonian steps," for representing the passage of a god through the air across the stage (whence the dictum *drus ex machina*, applied to the mock supernatural or providential), etc. Such machines were very numerous in the fully developed Greek theater, and were copied in the Roman

In the common experiment there is an excess of weight at one end of the cord, due to a plate which rests on the weight and is caught when the latter passes through a fixed ring, the weight is set free from a state of rest at a measured position above this ring, so that the acceleration takes place through a known distance, and the velocity per second after the removal of the excess of weight is observed to be proportional to the square root of the distance through which the acceleration takes place. The machine is named from its inventor, George Atwood (1746-1807), an English mathematician.—Bulldog machine, a combined sounding and dredging machine invented during the voyage of H. M. S. Bulldog in 1860, under the command of Sir Francis Leopold McClintock. It is an adaptation of Sir John Ross's deep-sea clam, with the addition of Brooke's principle of the disengaging weight. The chief credit of the invention is given to Mr. Steell, assistant engineer on board the Bulldog.—Centrifugal machine. See

machine-bolt (ma-shēn'bōlt), *n*. A bolt with a thread and a square or hexagonal head. *E. H. Knight*.

machine-boy (ma-shēn'boy), *n*. In English printing-offices, a boy who serves as helper to a machine-man. In the United States known as *feder* or *press-boy*

machineel (mach-i-nēl'), *n*. Same as *manchineel*

machine-gun (ma-shēn'gun), *n*. A gun which, by means of a variously contrived mechanism, delivers a continuous fire of projectiles. Such a gun may have a single barrel, or a series of barrels arranged horizontally or about a central axis. Machine guns may be divided into two classes: those firing small arm ammunition (also called *mitrailleuses*), and those firing shot and shell (called *revolving cannon*). The rapidity of fire of the most rapid machine guns of the first class is about 1,000 shots a minute. (See *Gatling gun*, under *gun*.)

Maxim Field-gun, with bullet proof shield

The *Maxim gun* is a single barreled machine-gun invented by Hiram Maxim, an American. In it the force of recoil is utilized to load and prepare the next charge for firing, and a water chamber surrounding the machinery keeps the parts cool. It is a very ingenious and efficient invention. The *Lowell battery-gun* has four barrels capable of being rotated by a lever, independently of the lock and breech mechanism. The firing is confined to one barrel at a time until this becomes heated or disabled, when it may be rotated to one side in order to bring another barrel into action. One lock only is used. *The Taylor machine gun*

Two-barreled Gardner Gun on Tripod.

has five parallel barrels arranged horizontally. The *Gardner machine-gun* has two to five barrels arranged horizontally. Its mechanism is simple, strong, and effective, but it can fire only about 350 shots a minute. The *Farwell machine-gun* consists of a group of ten steel barrels, each 0.45 inch bore, each barrel having its own magazine, containing 50 cartridges. The operations of firing, extracting the empty shells, and reloading are accomplished by a single revolution of a crank. The *Hotschek revolving cannon* is the type of the second class of machine-guns. It combines the advantages of long-range shell firing with rapidity of action. It has five barrels arranged around a central axis, and the breech is fixed and contains the loading, firing, and extracting mechanism. The rotation is intermittent, and the loading, firing, and extraction of the empty shell are performed while the barrels are at rest. This gun fires from 30 to 80 rounds of explosive shells in a minute, thus delivering from 750 to 2,000 fragments of shell with sufficient force to destroy life. There are many forms of this gun, each designed for a special object. One form, designed for flank defense of the ditches of fortifications, has every barrel rifled with a different twist, so arranged as to produce five different cones of dispersion, thus sweeping the ditch from end to end. The *Nordenfliet machine-gun* was designed as a defense against torpedo boats. It is made with 2, 3, 4, 5, 7, 10, or 12 barrels, and it can fire either volleys or single barrels. In case a barrel becomes clogged or disabled, the supply of cartridges can be cut off from it and the firing confined with the other barrels. The *Colt automatic machine-gun* is a single barreled gun in which the pressure of the powder gases, escaping through a small vent, actuates a lever which automatically puts in operation mechanism that withdraws the cartridge case and reloads the gun. The cartridges are stripped from feed belts.

machine-head (ma-shēn'hed), *n*. A rack and pinion sometimes used in stringed musical instruments, like the double-bass and the guitar, instead of the usual tuning-pegs.

machine-made (ma-shēn'mād), *a*. Made by a machine or by machinery.

machine-man (ma-shēn'man), *n*. In English printing-offices, the workman who manages or controls the operations of a printing-machine. In the United States known as the *pressman*.

machine-minder (ma-shēn'min'dér), *n*. The man or boy who has charge of a printing-machine while it is in operation. [Eng.]

machine-oven (ma-shēn'uv'n), *n*. A bakers' oven, a fruit-evaporator, or an oven for any other use, fitted with a traveling apparatus, rotatory table, reel, or any other mechanical device for aiding the process of baking, or for economizing time or space.

machiner (ma-shē'nér), *n*. A coach-horse, a horse that draws a stage-coach. [Eng.]

machine-ruler (ma-shēn'rú'ler), *n*. 1 A machine which lines or rules paper according to patterns. — 2 A modification of this machine for subdividing accurately scales and the like.

machinery (ma-shē'ne-ri), *n*. [*F* *machinerie*, *machinerie*, *machinerie*, *machinerie*. see *machine*, *n*.] 1 The parts of a machine considered collectively, any combination of mechanical means designed to work together so as to effect a given end: as, the *machinery* of a watch, or of a canal-lock. — 2 Machines collectively, a congeries or assemblage of machines as, the *machinery* of a cotton-mill is often moved by a single wheel.

In an insurance policy, *machinery* includes tools and implements of manufacture. *Buchanan v Exchange Fire Ins. Co*, 61 N Y, 20

All kinds of labor saving *machinery* are in fullest operation. *W M Baker, New Timothy*, p 172

3. Any complex system of means and appliances, not mechanical, designed to carry on any particular work, or keep anything in action, or to effect a specific purpose or end as, the *machinery* of government.

As lord and master of the Church, he [Henry VIII] could utilise Church *machinery* to obtain the divorce and he marriage on which he had set his king's heart. *Stubbs, Medieval and Modern Hist*, p 254

Specifically, the agencies, particularly if supernatural, by which the plot of an epic or dramatic poem, or other imaginative work, is carried on and conducted to the catastrophe.

The *machinery*, Madam, is a term invented by the critics to signify that part which the Deities, Angels, or Demons are made to act in a Poem.

Pope, Letter prefixed to E. of L. It is this kind of *machinery* which fills the Poems both of Homer and Virgil with such Circumstances as are wonderful, but not impossible. *Addison, Spectator*, No. 515.

engaging and disengaging machinery. See *engage*.

achine-shop (ma-shēn'shop), *n*. A workshop in which machines or parts of machines are made and repaired.

achine-tool (ma-shēn'töl), *n*. A machine driven by water, steam, or other power, for per-

forming operations formerly accomplished by means of hand-tools, as planing, drilling, sawing, etc., and taking its special name from the kind of work performed, as *planing-machine*, *drilling-machine*, etc. Also called *engine-tool*.

machine-twist (ma-shēn'twist), *n*. A three-cord silk thread made with a twist from right to left, intended especially for use in the sewing-machine.

machine-work (ma-shēn'wérk), *n*. 1. Work done by a machine, as distinguished from that done by hand; specifically, in English printing-offices, press-work done on a machine, in distinction from press-work done on a hand-press. — 2 The product of such work, articles manufactured wholly or chiefly by machinery.

machinist (ma-shē'nist), *n*. [*F* *machiniste* = *Sp* *Pg* *maquinista* = *It* *macchinista*, as *machine* + *-ist*] 1 A constructor of machines and engines, or one versed in the principles of machines; in a general sense, one who invents or constructs mechanical devices of any kind.

Has the insufficiency of *machinists* hitherto disgraced the imagery of the poet? or is it in itself too sublime for aciental contrivances to keep pace with?

Stevens, General Note on Macbeth

2 One who tends or works a machine. [Rare] — 3 In the rating of the United States navy, an engine-room artificer or attendant. — 4 In *U. S. politics*, an adherent of the machine, or a supporter of its methods. *The Nation*, XXXVI, 520. — 5. In the history of art, one of those Italian painters of about the seventeenth century (a period of artistic decline) who worked mechanically or according to rigid rules.

He [Franceschini] is reckoned among those painters of the decline of art to whom the general name of *machinist* is applied. *Encyc Brit*, IX, 687

machinize (ma-shē'niz), *v. t.* pret and pp. *machinized*, ppr *machinizing*. [*machino* + *-ize*] To bring into form or order like that of a machine, or by the use of machinery, elaborate or systematize.

The Times newspaper, by its immense correspondence and reporting, seems to have *machinized* the rest of the world for his [the traveler's] occasion. *Emerson, English Traits*, III

Cf *W* *brithyll*, a trout, *CL* *brith*, speckled. Cf *mackerel*².] One of several different fishes of the family *Scombridae*, and especially any fish of the genus *Scomber*. The common mackerel, *S. scombrus* is one of the best known and most important of food fishes, inhabiting the

Mackerel (*Scomber scombrus*)

North Atlantic on both sides. It attains a length of 18 inches though usually less. It is lustrous dark blue above, with many wavy blackish cross-striations, and is silvery below, with the base of the pectorals dark. The Eastern, tinker or chub mackerel is a closely related species, *S. pneumatophorus* so called from possessing a small air bladder which is lacking in *S. scombrus*. It is found in both the Atlantic and Pacific oceans. The big eyed, bull, or colly mackerel is *S. colias*, a variety of the last, locally named *Spanish mackerel* in England. The Spanish mackerel of the United States is a scumbrid of a different genus, *Scomberomorus maculatus*, of both coasts of North America, north to Cape Cod and California. It is one of the most valued food fishes, reaching a considerable size, bluish and silvery above, with bright reflections, the sides with many rounded brown spots, the spinous dorsal fin white at base, dark above and anteriorly. Other mackerel of this genus are the *corn*, *S. regalis*, and the *stern*, *S. caballa*. Figure mackerels are scumbrids of the genus *Axona*, as *A. thazard* or *A. rocher*, of less value as food fish. The horse mackerel properly so called is the tunny, *Oreogmus thynnus*, the largest of the scumbrids, sometimes attaining a length of over 10 feet and a weight of half a ton, found on both sides of the Atlantic, but this name is extended to various other fishes. (See *horse mackerel*.) Several carangoid fishes are loosely called mackerels, as the yellow mackerel, *Caranx chrysops* (See *mackerel*²) and the bluish or skipper, *Pomatomus saltatrix*, is sometimes called *mappung mackerel*.

Mackerel, on account of its perishable nature, was allowed to be sold on Sunday, as *Clay notes*. "I've Sundays are prophand by *Mackerel* clubs."

Banded mackerel, a carangoid, *Seriola zonata*, the red der fish [Atlantic coast, U S] — **Bay-mackerel**, the Spanish mackerel. [Chesapeake Bay, U S] — **Black-spotted Spanish mackerel**, the *corn* or kingfish, *Scomberomorus regalis*. — **Bel-grass mackerel**, mackerel of inferior quality taken fishery in the Gulf of St Lawrence.

— **Fall mackerel**, a variety of the common mackerel which has been described as a distinct species under the name of *Scomber gress*. In this case the true mackerel is called *spring mackerel*, *S. venustus*. But fall mackerel are simply tunners, about 10 inches long, of wandering or irregular habits. — **Green mackerel**, a carangoid fish, *Chloroscomber chrysops*. [Southern coast, U S] — **Mackerel gale**. See *gale*². — **Mackerel-latch**, in fishing tackle, a clamp for holding fast the hurr end of a line. — **Mess mackerel**, scraped mackerel with the heads and tails cut off, losing in weight 20 pounds on the barrel, but increasing in value a trade name. They are associated as Nos 1, 2, and 3. — **Mixed mackerel**. Same as *thumble eyed mackerel*.

— **Net-mackerel**, mackerel of the right size to be mackerel. — **Overgrown mackerel**, mackerel 15 inches or more in length. [Fishermen's term.] — **Racer mackerel**, a sleek mackerel. — **Round mackerel**, any variety of the common mackerel, as distinguished from *horse mackerel*. *Spanish mackerel*, etc. [Fishermen's term.] — **Slink mackerel**, a poor, thin mackerel taken among schools of fat ones in the fall of the year. [Nova Scotia.] — **Soused mackerel**, mackerel either fresh or canned by the usual process, and preserved after an old (Roman) recipe employing a pickle of vinegar, spices, and other ingredients. *Spanish mackerel*. (a) See def 1. (b) The bonito *Sarda chelonis* [California]. — **Spotted mackerel**, the Spanish mackerel.

— **Spring mackerel**, the ordinary commercial mackerel of good size and quality, sometimes technically named *Scomber venustus* distinguished from *fall mackerel*. — **Thumble-eyed mackerel**, the mixed, colly or chub mackerel. [Local U S] — **Tinker mackerel**. (a) The chub mackerel. (b) The common mackerel of next to the smallest of the four commercial sizes (*large*, *medium*, *tinkers*, *blanks*), which are supposed to indicate respectively four, three, two, and one years of growth. Mackinaw blanket [So called from *Mackinaw*, an abbreviated form of *Michilimackinac*, the name of an island in the strait connecting Lakes Michigan and Huron, said to mean in Ojibway 'turtle,' in allusion to its shape.] A name given to the blankets distributed to the Indians of the Northwest by the United States government. The name is or was formerly current

chiefly on the upper Great Lakes, and owes its origin to the fact that Fort Mackinaw was for many years the most remote post in the Northwest, so that from this point a large number of Indians received their supplies. Mackinaw blankets were of various sizes, colors, and qualities.

Mackinaw boat. A flat-bottomed, flat-sided boat with sharp prow and square stern, used on the upper Great Lakes and the rivers emptying into them. The advantage of the Mackinaw boat over the birch canoe is that its beam stands rougher hand ling, and that it can be drawn up on the beach without being unloaded, the disadvantage is that it is too heavy to be carried over portages, as the birch canoe is carried. The largest Mackinaw boats are rowed by four or more persons, and are often rigged with a sail.

Mackinaw trout. See *trout*.

mackinat, n. See *mackin*.
mackintosh (mak'in-tosh), *n* [Also *macintosh*; so named from Charles Mackintosh, the inventor.] 1 A garment, particularly an overcoat or cloak, rendered water-proof by a solution of india-rubber, either applied on the surface as a coating or placed between two thicknesses of some cloth of suitable texture—2 Rubber cloth of the kind used in making a mackintosh

Maclure (mak-lö'rä), *n*. [NL (Nuttall, 1818), named after W Maclure, see *Maclure*] 1 A genus of plants of the order *Urticaceae*, the nettle family, the tribe *Moraceae*, and the subtribe *Broussonetieae*, thus closely related to the mulberry. It is characterized by the pistillate flowers having a four-parted perianth and growing in quite large heads, and the staminate flowers in short, loose racemes, the fruit is multiple, composed of many small achenia packed closely together upon a globose, rather fleshy receptacle, resembling a warty green orange. There is but a single species, *M. aurantiaca*, the Osage orange, a native of Arkansas and adjacent regions in the United States. It is a spreading tree with handsome shining ovate leaves, from 50 to 60 feet in height and 2 feet or less in diameter. Its wood is hard, strong, and flexible, of a satiny texture, the heartwood bright-orange turning brown, the sapwood lighter. It was formerly used by the Indians for bows, hence called by the French settlers *bols d'arc* (bow wood), corrupted into *boudark* or *boldark*. It bears cutting back and has formidable thorns and hence is very extensively used in the United States for hedges. See *cut* in next column. 2 In conch., same as *Maclurites*. *Ebenezer Emmons*, 1843

maclurite (mak-lör'it), *n* [Cf *Maclure* (see *Maclurites*) + -ite] 1. A variety of aluminous pyroxene found at Wilmington, Delaware—2. A synonym of *chondrodite*.—3. A fossil shell of the genus *Maclurites*. Also *maclurite*.

Maclurites (mak-lör'it-ész), *n*. [NL (Menke, 1830) (F *Maclurite*—Lesueur, 1818), so called from William Maclure, a noted geologist (1763-

Macluritidae (mak-lö-rit'i-dē), *n pl* [NL, < *Maclurites* + -idae] A family of extinct mollusks, of uncertain relationship, but generally referred to the *Rhipidoglossa*

The shell is discoidal, paucispiral, and with the spire sunk in an umbilical cavity. The operculum is subspirally and furnished with two internal projections, of which one beneath the nucleus, is very thick and rugose. By Woodward the constituent genus was referred to the heteropod family *Atlantidae*, by Tryon, as type of a family, to the scutibranchiate gastropods, between the *Bellerophonidae* and *Halutidae*, by others to the family *Solaritidae*, etc. Thirteen species have been recognized in the Paleocene formations from the Lower Eocene to the (a) biferous. Also *Maclurea*, *Maclureidae*, *Macluridae*

Macquartia (ma-kwār'ti-ä), *n*. [NL (Robineau-Desvoidy, 1830), named after P J M Macquart (1778-1855), a French entomologist.] A genus of flies of the family *Tachinidae*, or giving name to the family *Macquartidae*. They are of medium and large size, slender, thickly hairy, usually black, often metallic, and are found near streams on the under side of leaves.

Macquartidae (mak-wär'ti-ä-dē), *n pl* [NL, < *Macquartia* + -idae] A family of dipterous insects, typified by the genus *Macquartia*. Also *Macquartidae*

macramé (mak-ra-mä'), *n* [It *macrame*, said to be of Ar origin.] An ornamental trimming made by leaving a long fringe of thread and knotting the threads together so as to form geometrical patterns. Also called *knotted-bar work*.—**Macramé cord**, a kind of fine cord prepared for the manufacture of macramé lace, and also used for other work, such as netting of various kinds, and for hammocks.

—**Macramé lace**, a kind of knotted work in which elaborate fringes and the like are made in modern imitation of the old knotted point.

macrandrous (mak-ran'drus), *a*. [Cf Gr. *μακρός*, long (see *macron*), + *άνδρ* (*ándr*), male (in bot a stamen)] Having elongated male plants, as certain algae, particularly the *Edogoniaceae*

macrochene (mak-râ-kên), *n* [*< Macrochena*]. A member of the *Macrochensidae*.
Macrochensia (mak-râ-kê-ni-â), *n*. [NL, *< Gr. μακρόχην, long-necked, < μακρός, long, + χήνη, neck*] A genus of fossil perissodactyls founded by Owen in 1838 upon remains of camel-like quadrupeds found in the Tertiary of South America. Two species are named *M. patachonica* and *M. boliviensis*. *Opisthorhinus* is synonymous.

Macrochensidae (mak-râ-kê-ni-â-dê), *n. pl* [NL, *< Macrochena + -idae*] A family of perissodactyl *Ungulata*, established upon the genus *Macrochensia*. These great ungulates were long-necked, like camels (whence the name), but were more nearly related to the rhinoceros. The cervical vertebrae resemble those of camels in the disposition of the vertebral foramina, but their centra are flat, not opisthocoelous. The fibula articulates with the calcaneum, and each foot is 3 toed. The dental formula is 8 incisors, 1 canine, 4 premolars, and 3 molars in each upper and lower half jaw—in all, 44 teeth, in almost continuous series, the canines being small. Two or three upper molars have a shallow valley extending inward from the anterior part of the inner wall, and all the lower premolars and molars have two crescentic ridges, anterior and posterior. The nearest relatives of the *Macrochensidae* are the *Palaeotheriidae* and *Rhinocerotidae*.

macrochensiform (mak-râ-kê-ni-â-fôrm), *a*. [*< NL Macrochena + L forma, form*] Having the form or characters of a macrochene.

macrocephalic (mak-rô-nê-sel'ik or -sêl'â-lik), *a*. [*As macrocephalus + -ic*] Same as *macrocephalus*.

De Quincey, Style, note 9

Macrobiotidae (mak-rô-bi-ô-ti-dê), *n. pl* [NL, *< Macrobiota + -idae*] A family of *Arctosca*, typified by the genus *Macrobiotus*. They are minute vermiform arachnids without respiratory organs, forming one group of a number of animalcules known as *slugs* or *bear animalcules* or *water bears*, from their sluggish movements. The form is usually a long oval, and there are four pairs of short clawed legs. These animals are found in moss or fresh water, and resemble rotifers in their power of reviving after desiccation, whence their name.

Macrobiotus (mak-rô-bi-ô-tus), *n* [NL, *< Gr. μακροβίωσις, having a long life; see macrobiote*] The typical genus of *Macrobiotidae*. *M. shulzei* is an example. See out under *Arctosca*.

Macrocameræ (mak-rô-kam'ê-râ), *n. pl* [NL, *< Gr. μακροκάμαρος, long-chambered*] A subtribe of choriastidan sponges having large chambers distinguished from *Microcameræ*. Lendenfeld—2. A tribe of ceratose sponges with large saeciform ciliated chambers and soft transparent ground-substance. Lendenfeld.

macrocamerate (mak-rô-kam'ê-rât), *a*. [*< Gr. μακρός, long, + κάμαρα, a vaulted chamber. see camera*] Having large chambers, as a sponge;

specifically, of or pertaining to either of the groups *Macrocameræ*.

macrocarpon (mak-rô-kâr'pus), *a* [*< Gr. μακρός, long, + καρπός, fruit*] Having large fruit.
Macrocentri (mak-rô-sen'tri), *n. pl* [NL, *< Gr. μακρόκεντρον, long-centered*] One of two prime sections of the parasitic hymenopterous family *Chalcididae*. It includes 13 subfamilies and the largest species in the family, having 8 jointed tarsal, usually many jointed antennæ, and anterior tibiae armed with a large curved spur.

Macrocentrus (mak-rô-sen'trus), *n* [NL (Curtis, 1833), *< Gr. μακρόκεντρος, having a long sting, < μακρός, long, + κέντρον, a goad, sting see center*] A genus of ichneumon-flies, typical of the subfamily *Macrocentrina*, having the abdomen inserted above the hind coxæ. North America and Europe have each about 6 species. *M. debilis* is a common parasite of the codling moth in the United States.

macrocephalic (mak-rô-sel'ik or -sêl'â-lik), *a*. [*As macrocephalus + -ic*] 1. Of or pertaining to a large head, associated with excessive size of the head as, *macrocephalic idioey*—2. In *anc prus*, having one syllable too many at the beginning an epithet of dactylic hexameters the first foot of which apparently has a syllable in excess. Also *procephalic*. See *dolichuric*.

macrocephalous (mak-rô-sel'â-lus), *a* [*< Gr. μακροκεφαλος, long-headed, < μακρός, long, + κεφαλή, head*] 1. In *zool*, having a long or large head—2. In *bot*, having the cotyledons of a dicotyledonous embryo consolidated, and forming a large mass compared with the rest of the body.

Macrochelys (mak-rôk'ê-lis), *n* [NL, *< Gr. μακρός, long, + χελύς, a tortoise see chelys*] A genus of snapping-turtles of the family *Chelydridæ*. *M. lucertina* is a large alligator-turtle inhabiting the southern United States.

macrochemical (mak-rô-kom'î-kal), *a* [*< Gr. μακρός, long, large, + χημική, chemical*] Of or pertaining to chemical tests which may be applied, or reactions which may be observed, with the naked eye distinguished from *microchemical*.

Macrochira (mak-rô-kî-râ), *n*. [NL, *< Gr. μακρόχειρ, long-handed (long-armed), < μακρός, long, + χεῖρ, the hand*] 1. A genus of large maoid crabs, having enormously long legs and a comparatively small body. The giant spider crab of Japanese waters, a species of this genus, has legs which span 18 feet or more though the body is only a foot broad and 18 inches long.

2. A genus of dipterous insects.

macrochiran (mak-rô-kî-rân), *a* and *n* [*As macrochira + -an*] 1. *a* Long-handed, having a long manus or pinnion of the wing, as a swift or a humming-bird; specifically, of or pertaining to the *Macrochires*.

II. *n* Any member of the *Macrochires*, a macrochire.

macrochire (mak-rô-kîr), *n*. A bird of the group *Macrochires*.

Macrochires (mak-rô-kî-rêz), *n. pl* [NL, *< Gr. μακρόχειρ, long-handed (long-armed) see Macrochira*] A group of birds, so named from the length of the terminal as compared with the proximal portion of the wing. An originally used by Nitzsch 1829, it included the humming birds and swifts (*Trochilidae* and *Cypselidae*), to which are now usually added the goatsuckers (*Caprimulgidae*) nearly synonymous with *Cypseliformes*.

macrochiropter (mak-rô-kî-rop'têr), *n* Same as *macrochiropteran*.

Macrochiroptera (mak-rô-kî-rop'tê-râ), *n. pl* [NL, *< Gr. μακρός, long, large, + χίρ, Chiroptera*] A suborder of *Chiroptera*, comprising the largest species of the order. It consists of the fruit-bats, or *Frugivora*, as distinguished from the *Microchiroptera*, or ordinary bats. Usually *Megachiroptera*.
macrochiropteran (mak-rô-kî-rop'tê-rân), *a* and *n*. I. *a* Of or pertaining to the *Macrochiroptera*.

II. *n* One of the *Macrochiroptera*, a frugivorous bat, or fruit-bat. Also *macrochiroptere*.
macrochoanite (mak-rô-kô'ân-î-t), *a* and *n*. [*< NL. Macrochoantes*] I. *a* Having long septal funnels, as a cephalopod, of or pertaining to the *Macrochoantes*.

II. *n* One of the *Macrochoantes*.
Macrochoanites (mak-rô-kô'ân-î-têz), *n. pl* [NL, *< Gr. μακρός, long, + χόανη, a funnel see choanite*] A group of cephalopods, containing those nautiloids and ammonoids whose septal funnels are long. Hyatt, Proc. Bost Soc. Nat Hist., 1883, p 280.

Macrocnemum (mak-rôk-nê'mum), *n*. [NL (P Browne, 1756), so called in allusion to the long flower-stalk, *< Gr. μακρός, long, + κνήμη, a leg. see*

cnemis] A genus of dicotyledonous gamopetalous plants of the natural order *Rubraceæ*, the madder family, tribe *Cinchoneæ*, and subtribe *Eucinchoneæ*. It is characterized by the placenta being adnate to the middle partition a capsule usually septicidal, corolla lobes with pubescent margins, and a style which is two cleft at the apex. There are about 9 species, confined to tropical America and the West Indies. They are trees or shrubs with opposite petiolate leaves, deciduous stipules between the petioles and white or rose colored flowers in terminal or axillary panicles. Several species are cultivated for ornament among them *M. lanceolata*, with white flowers called in Jamaica *whitethorn*.

macrococtus (mak-rô-kok'tus), *n*, *pl macrococti* (-si) [NL, *< Gr. μακρός, long or large, + κόκκος, a berry see coctus*] A somewhat general term applied to certain bacteria, having reference to the dimensions of the isolated individual cells.

Cocci. Isolated cells which are isodiametric, or at least very slightly elongated in one direction. These are distinguished when necessary according to their dimensions, into *micrococci*, *macrococci*, and *monads* form.

De Bary, Kuntzi (trans.), p 468

macroconidium (mak-rô-kô-nid'ium), *n*, *pl macroconidia* (-a) [NL, *< Gr. μακρός, long, large, + NL conidium, q v*] A conidium of large size. See *conidium*.

macrocosm (mak-rô-kôzm), *n* [*< Gr. μακρός, long, large, great, + κόσμος, world see cosmology*] Cf. *microcosm*. 1. The great world, the universe, or the visible system of worlds, opposed to *microcosm*, or the little world constituted by man. The conception dates back to Democritus (born 460 B C). See *microcosm*.

The first section shows the use that the Christian virtuoso may make of the contemplation of the *macrocosm*, and especially of the later discoveries made in the celestial part of it.

Boyle, Christian Virtuoso, II

2. The entire mass of anything of which man forms a part, the whole of any division of nature or of knowledge.

The *macrocosm* of society can be inferred from the microcosm of individual human nature.

N A Rev, CXX 254

According to Raymond man is the microcosm from which the whole *macrocosm* of theology is evolved.

J Owen, Lectures with Skipton, II 445

macrocosmic (mak-rô-kôz'mik), *a* [*< macrocosm + -ic*] Of or pertaining to the *macrocosm*, of the nature of a *macrocosm*, comprehensive, immense.

The world with which alone consciousness has to do is the world as it has been organized and registered in the brain by experience and the journeys which it makes are no more than the microcosmic representations of *macrocosmic* distance.

Maudsley, Mind, XII 508

macrocyst (mak-rô-kis't), *n* [*< Gr. μακρός, long or large, + κύστη, cyst*] A cyst of large size applied particularly to the cyst or spore-case of certain algae, notably *Pinnularia*.

Macrocytæ (mak-rô-kis'tê-â), *n. pl* [NL (Kuetzing, 1849), *< Macrocytis + -æ*] A division of marine algae belonging to the *Laminariaceæ*, named from the genus *Macrocytis*, and containing also the genera *Lissonia*, *Neocytis*, and *Pinnaria*.

Macrocytis (mak-rô-kis'tis), *n* [NL (Agardh, 1824), *< Gr. μακρός, long, + κύστη, a bladder, bag see cyst*] A monotypic genus of gigantic seaweeds belonging to the *Laminariaceæ*. When fully grown the frond consists of a much branched root, from which arise many filiform simple or branched stems, naked below but furnished above with numerous unilateral lanceolate petiolate leaves, having thin petioles enlarged into pear shaped or oblong air cells. The lateral leaves have their edges directed toward the stem, and are so far

Macrocytis pyrifera

vertically disposed and the stem itself when unbroken always terminates in an oblique leaf broader than the rest and having one or more slits in its base. This terminal leaf is the growing apex, and from the development of the slits in the base new lateral leaves are gradually separated. The spores form dense, cloud like, irregular patches on small radical leaves. *M. pyrifera*, the only species grows in the temperate zone in its distribution. The stems, which are the longest known in the vegetable kingdom, vary from 5 feet to several hundred feet in length, and Hooker observed them near the Crozet Islands fully 700 feet long. Harvey.

macroactyl, **macroactyle** (mak-rô-dak'til), *a*, and *n* [*< NL. macrodactylus, < Gr. μακροδάκτυλος, long-fingered (long-toed), < μακρός, long, + δάκτυλος, finger, toe*] I. *a* Having long toes, specifically, of or pertaining to the *Macroactylæ*. Also *macroactylic*, *macroactylous*.

II. *n*. One of the *Macroactylæ*.

Macroductyla (mak-rō-dak'ti-lā), *n. pl.* [NL., neut. pl. of *macroductylus* see *macroductyl*] In Latreille's system, the second tribe of the second section of *Claricornes*, having simple narrow tibiae and long five-jointed tarsi, the last joint of which is large, with two strong hooks. Also *Macroductyl*

Macroductyli (mak-rō-dak'ti-lī), *n. pl.* [NL., pl. of *macroductylus* see *macroductyl*] 1 Same as *Macroductyla* — 2 In Cuvier's system, a group of *Grallae* or wading birds, including the jacanas, horned grebes, and mound-birds, with the rails, cranes, coots, and gallinules. It is a heterogeneous group, no longer in use.

macroductylic (mak-rō-dak-tī'ik), *a* [As *macroductyl* + *-ic*] Same as *macroductyl*

Macroductylidae (mak-rō-dak-tī'lī-dā), *n. pl.* [NL., < *Macroductylus* + *-idae*] A family of *Coleoptera*, named in 1837 by Kirby from the genus *Macroductylus* now generally merged in *Scaevola*

macroductylous (mak-rō-dak'ti-lus), *a.* [< NL, *macroductylus*, long-toed. see *macroductyl*] Same as *macroductyl*

Macroductylus (mak-rō-dak'ti-lus), *n.* [NL. (Latreille, 1825) see *macroductyl*] A genus of lamellicorn beetles, the type of the family *Macroductylidae*. It comprises rather small species, of graceful form and variable colors, with slender legs and the tarsal claws split at the tip. Of its more than 30 species, 3 are North American, of which *M. apenninus*, erroneously called *rose-hug*, is very destructive to roses and many fruits of the family *Rosaceae*. It is about one third of an inch long, of a yellowish color with long brown legs, and appears suddenly in June in immense numbers

macrodiagonal (mak-rō-dī-nō-gō-nal), *a* and *n.* [< Gr. *μακρός*, long, + *διαγώνιος*, diagonal see *diagonal*.] I. *a*. Constituting or being the longer diagonal of a rhombic prism; pertaining to the macrodiagonal — **Macrodiagonal axis**, in *crystal*, the longer lateral axis in an orthorhombic crystal — **Macrodiagonal section**, a plane passing through the macrodiagonal and vertical axes of a crystal

II. *n.* The longer of the diagonals of a rhombic prism

macrodomatic (mak-rō-dō-mat'ik), *a* [< *macrodom* + *-atic*²] Of or pertaining to a macrodome

macrodom (mak-rō-dōm), *n.* [< Gr. *μακρός*, long, + *δωμα*, *δωμα*, a house, dome see *dome*¹] In *crystal*, a dome parallel to the macrodiagonal axis of an orthorhombic crystal See *dome*¹, 5

macrodon (mak-rō-don), *a* [< Gr. *μακρός*, long, + *δόντις* (*odont-*) = *E tooth*] Having large teeth

macrodontism (mak-rō-don-tizm), *n.* [< *macrodon* + *-ism*] A form of dentition in which the teeth are large

Macroglossa (mak-rō-glos'it), *n.* [NL., < Gr. *μακρός*, long, + *γλῶσσα*, the tongue see *glossa*] 1 A genus of hawk-moths of the family *Nesidae*, having a short abdomen with a large bunch of hair at the tip, like a bird's tail. The wings are short, often opaque and sometimes glossy. Nearly 100 species are known. They fly by day, and with great swiftness. *M. stellatarum* is known as the *humming-bird hawk moth* (which see, under *hawk moth*)

2 Same as *Macroglossus*

macroglossate (mak-rō-glos'it), *a* [As *Macroglossa* + *-ate*¹] Having a long tongue

Macroglossi (mak-rō-glos'i), *n. pl.* [NL., pl. of *Macroglossus*, *q. v.*] A division of *Pteropoda*, or fruit-bats, having an extremely long slender tongue. It includes the genera *Noctopora*, *Eonycterus*, *Melonycterus*, and *Macroglossus*

macroglossia (mak-rō-glos'i-ā), *n.* [NL., < Gr. *μακρός*, long, + *γλῶσσα*, the tongue see *glossa*] In *pathol.*, hypertrophy of the tongue

macroglossine (mak-rō-glos'in), *a* [As *Macroglossa* + *-ine*¹] Same as *macroglossate*

Macroglossus (mak-rō-glos'us), *n.* [NL., < Gr. *μακρός*, long, + *γλῶσσα*, the tongue see *glossa*] A genus of very small fruit-bats, with the dental formula as in *Eonycterus*, but the index-finger with a claw. *M. minimus* is a common Indian species, smaller than the serotine of Europe

macrognathic (mak-rō-gnath'ik), *a.* [< Gr. *μακρός*, long, + *γνάθος*, the jaw see *gnathic*] Having long jaws, prognathous. Applied by Huxley to human skulls of Neolithic age, of a broad or rounded form, with prominent probosc and angular or loseange shaped facial region, and highly developed and procurant jaws

macrognathous (mak-rō-gnā-thus), *a* Same as *macrognathic*

macrogonidium (mak-rō-gō-nīd'i-um), *n.* *pl.* *macrogonidia* (-ī) [NL., < Gr. *μακρός*, long, large, + NL. *gonidium*, *q. v.*] In *bot.*, a large gonidium as compared with others produced

by the same species See *gonidium* and *microgonidium*

macrolepidopter (mak-rō-lep-i-dop'tēr), *n.* Any member of the group *Macrolepidoptera*

Macrolepidoptera (mak-rō-lep-i-dop'tē-rā), *n. pl.* [NL., < Gr. *μακρός*, long, + NL. *Lepidoptera*, *q. v.*] Lepidopterous insects of considerable size, as collectively distinguished from the smaller forms, which are called *Microlepidoptera*. The name includes all the butterflies or *Rhopalocera*, and the following six families of moths or *Heterocera*: *Sphingidae*, *Sesidae*, *Zygænidæ*, *Bombycidae*, *Noctuidæ*, and *Geometridæ*

macrolepidopterist (mak-rō-lep-i-dop'tē-ris-t), *n.* [< *Macrolepidoptera* + *-ist*] One who is versed in the natural history of the *Macrolepidoptera*

Macroleptes (mak-rō-lep'tēs), *n. pl.* [NL. (Swainson, 1830)] A tribe of acanthopterygian fishes distinguished by the development of conspicuous scales and large branchial apertures. It was intended to include the perciform, chaetodontoid, labroid, and similar fishes [Rarely used]

macrology (mak-rō-lō-jī), *n.* [< LL. *macrologia*, < Gr. *μακρολογία*, long speaking, < *μακρόλογος*, speaking long, < *μακρός*, long, + *λέγειν*, speak see *-ology*] Long and tedious talk, prolonged discourse, with little or nothing to say; superfluity of words [Rare]

macromeral (mak-rō-mē-ral), *a.* [< *macromere* + *-al*] Of or pertaining to a macromere as, *macromeral blastomeres*

macromere (mak-rō-mēr), *n.* [< Gr. *μακρός*, long, + *μερος*, a part] In *embryol.*, the larger one of two unequal masses into which the vitellus of a lamellibranch, as a fresh-water mussel, divides, the so-called vegetative cell of Rabi, which subdivides into blastomeres, partly by fission, partly by gemmation. See *macromere*

macromeric (mak-rō-mēr'ik), *a.* [< *macromere* + *-ic*] Same as *macromeral* Huxley

macromeritic (mak-rō-mēr'it'ik), *a* [As *macromere* + *-itic*² + *-ic*] In *lithol.*, an epithet introduced by Vogelsang to designate the granitoid structure of a rock when developed coarsely enough to be recognizable by the naked eye. *Macromeritic* is opposed to *macromeritic*, the latter indicating a crystalline structure too fine to be visible without the aid of the microscope

macrometer (mak-rō-mē'tēr), *n.* [< Gr. *μακρός*, long, + *μέτρον*, measure] A mathematical instrument for measuring inaccessible heights and objects by means of two reflectors on a common sextant

macromolecule (mak-rō-mol'e-kūl), *n.* [< Gr. *μακρός*, long, + *E molecule*] A molecule consisting of several molecules (J. J. Stoney, 1885)

macromyelon (mak-rō-mī'e-lon), *n.* [NL., < Gr. *μακρός*, long, + *μυελός*, marrow] Owen's name of the medulla oblongata same as the *myelencephalon* of Huxley and the *metencephalon* of Quain and most anatomists

macromyelonal (mak-rō-mī'e-lon-al), *a* [< *macromyelon* + *-al*] Pertaining to the macromyelon, metencephalic

macron (mak'rōn), *n.* [< Gr. *μακρόν*, neut. of *μακρός*, long, tall, deep, far, large, great, long in time, akin to *μήκος*, Doric *μάκος*, length, and prob = *L. macer* (*macr-*), lean, lank see *meager*] In *gram.*, a short horizontal line placed over a vowel to show that it is long in quantity, or, as in English, has a "long" sound opposed to the *breve*, or mark of a short vowel. Thus, in Greek α, ι, ε, and in Latin ā, ē, ī, ō, ū, the long vowels corresponding to the short vowels ä, é, i, ô, u, etc. In English, a, e, i, ô, u, the conventional notations of the name sounds of these vowels. In this dictionary, in the etymologies, the macron is used uniformly to indicate a vowel long in quantity, to the exclusion of the circumflex (except in Greek) and the *u* with a *u*, which are elsewhere often used for the same purpose. Thus the Anglo-Saxon and Icelandic long vowels often, the Icelandic usually, denoted by the acute are uniformly marked with the macron (the acute, in Anglo-Saxon, being retained only as a convenient indication of a diphthong, as in *ea*, *eo*, etc.). Also called *macrotone*

Macronemes (mak-rō-nēm'ē-δ), *n. pl.* [NL., < Gr. *μακρός*, long or large, + *νήμα*, a thread, + *-es*] A name given by Saccardo to various subsections of the *Mucedinæ*, depending upon the size of the hypopharynx

macronucleus (mak-rō-nū'klē-us), *n.*, *pl.* *macronuclei* (-ī) [NL., < Gr. *μακρός*, long, large, + NL. *nucleus*] A large nucleus which may subdivide into or be replaced by smaller nuclei

Macronyches (mak-rōn'ī-kēs), *n. pl.* [NL., < Gr. *μακρός*, long, + *νύχξ* (*nyx-*), claw, talon see *onyx*.] In Sundevall's classification of birds, a

cohort of *Gallina*, composed of the Australian mound-birds or *Megapodidae*

Macronyx (mak-rō-nīks), *n.* [NL., < Gr. *μακρός*, long, + *νύχξ* (*nyx-*), claw, talon see *onyx*.] 1. In *ornith.*, a genus of African larks of the family *Alaudidae*, named by Swainson in 1827 on account of the long hind claw. There are several species, as *M. capensis*. — 2. In *entom.*, (a) A genus of exotic robber-flies of the family *Asilidae* (b) A genus of aretoid moths. *Felder*, 1874

macropetalous (mak-rō-pet'a-lus), *a* [< Gr. *μακρός*, long, + *πέταλον*, a leaf (petal) see *petal*] In *bot.*, having large petals

macrophthalmous (mak-rō-thal'mns), *a.* [< Gr. *μακρός*, long, large, + *ὀφθαλμός*, eye] In *zool.*, having large eyes

macrophylline (mak-rō-fil'in), *a.* [NL., < Gr. *μακρός*, long, large, + *φύλλον*, a leaf.] In *bot.*, consisting of elongated, extended leaflets or foliose expansions opposed to *microphylline*

macrophyllous (mak-rō-fil'us), *a* [< Gr. *μακροφύλλος*, long-leaved, < *μακρός*, long, + *φύλλον*, = *L. folium*, a leaf] In *bot.*, having large leaves

Macropina (mak-rō-pī-nē), *n. pl.* [NL., < *Macropus* + *-ina*²] A division of marsupials, containing the kangaroos J. E. Gray, 1825

macropinacoid (mak-rō-pin'a-koid), *n.* [< Gr. *μακρός*, long, + *πινάξ* (*pinak-*), a board, tablet, + *είδος*, form] In *crystal*, a plane parallel to the vertical and macrodiagonal axes of an orthorhombic crystal See *pinacoid*

macropinacoidal (mak-rō-pin-a-koi'dal), *a* [< *macropinacoid* + *-al*] Of or pertaining to a macropinacoid as, *macropinacoidal planes*

Macropiper (mak-rō-pī-pēr), *n.* [NL. (F. A. Miguel, 1840), < Gr. *μακρόν*, long, + *πίπερις*, > *L. piper*, pepper see *pepper*] A genus of dicotyledonous apetalous plants belonging to the natural order *Piperaceae* and the tribe *Pipereae*, characterized by an ovary with one cell and one ovule, flowers imperfect, usually in dense axillary spikes, and the fruit sessile, the berries often having the fleshy bracts and rachis united with them to form a multiple fruit. There are about 6 species natives of the islands in the Pacific. They are shrubs, with erect stems, and alternate leaves on petioles dilated at the base. *M. methysticum* is the Polynesian *ava*, *cava*, or *kava*, from whose root a stimulating beverage is made (See *kava*). *M. carolinense* is the native pepper of New Zealand, the *kawa kawa* a small aromatic tree, furnishing a tea and a remedy for toothache, and bearing yellow berries edible except the seeds

Branch of *Macropiper methysticum* with flowers

macropleur (mak-rō-plūr), *a* [< Gr. *μακρός*, long, + *πλευρά*, side see *pleura*] Having long pleurae specifically applied to certain trilobites, in distinction from *brachypleural*. *Amer. Jour. Sci.*, 3d ser., XXXII, 475

macropod (mak-rō-pod), *a* and *n.* [< Gr. *μακρόπους* (*-pod-*), long-footed, < *μακρός*, long, + *πούς* (*-pod-*) = *E foot*] I. *a*. Having long or large feet or legs

II. *n.* A long-legged or long-footed animal

macropodal (mak-rō-pō-dal), *a* [As *macropod* + *-al*] Same as *macropod*

macropodan (mak-rō-pō-dan), *a* and *n.* [As *macropod* + *-an*] Same as *macropod*

Macropodia (mak-rō-pō-dī-ā), *n. pl.* [NL., < Gr. *μακρόπους* (*-pod-*), long-footed see *macropod*] A genus of spider-crabs or sea-spiders founded by W. E. Leach in 1813 upon the common British species formerly known as *Cancer phalangium*, and made the type of a family *Macropodiadae*. *Stenorhynchus* of Latreille is a synonym.

Macropodiadae (mak-rō-pō-dī-ā-dē), *n. pl.* [NL., < *Macropodia* + *-adae*.] A family of enormously long-legged crabs, typified by the genus *Macropodia*. *Leptypodidae* is a synonym. Also *Macropodidae*.

macropodian (mak-rō-pō-dī-an), *a* and *n.* [As *macropod* + *-ian*] I. *a*. Long-legged; macropod; specifically, of or pertaining to the *Macropodiadae*

II. *n.* A long-legged crab; a member of Leach's family *Macropodiadae*.

Macropodidae (mak-rō-pōd'i-dē), *n. pl.* [*< Macropus (-pod-) + -idae*]. 1. A family of marsupial mammals of the order *Didelphina* or *Marsupialia*, the kangaroos. The weight of the body is in the hind quarters, limbs, and tail, these parts being disproportionately enlarged. The head is long with large ears and lashed eyelids, the phylogeny resembling that of some ruminants, the neck is slender, and the fore quarters are light, with small limbs ending in five-fingered hands. The hind feet have no inner toe, the second and third toes being much reduced and inclosed in skin, the weight of the body is borne upon the enlarged fourth and fifth digits. The stomach is sacculated and the diet strictly herbivorous. The dental formula is 8 incisors above and 1 below on each side, 1 canine, 1 premolar, and 4 molars in each upper, no canine, 1 premolar, and 4 molars in each lower half-jaw—in all, 30 teeth, of which the upper canines may be absorbed, and 1 molar on each side above and below may be deciduous. The leading genera are *Macropus*, *Halmaturus*, *Lagorchestes*, *Petrogale*, *Dendrolagus*, and *Doropus*. See *kangaroo* 2. Same as *Macropodidae*.

Macropodinae (mak-rō-pō-dī-nē), *n. pl.* [NL, *< Macropus (-pod-) + -inae*]. The leading subfamily of *Macropodidae*, the kangaroos proper. When the kangaroo rats (*Hypsigymna*) were included in *Macropodidae*, this family was divisible into *Macropodinae* and *Hypsigymninae*.

macropodous (mak-rō-pō-dus), *a.* [As *macropod* + *-ous*]. In bot., long-footed, of a leaf, having a long footstalk, of a monocotyledonous embryo, having the radicle large in proportion to the cotyledon.

Macropoma (mak-rō-pō-mā), *n.* [NL, *< Gr μακρός, long, + πώμα, a cover, lid (operculum)*]. A genus of fossil celacanthoid ganoid fishes founded by Agassiz upon forms of Cretaceous age with homocercal tail and large operculum.

macroprism (mak-rō-prizm), *n.* [*< Gr μακρός, long, + πρίσμα, prism*]. A prism of an orthorhombic crystal lying between the unit prism and the macropinacoid.

macropter (mak-rō-p'et-er), *n.* [*< Gr μακρόπτερος, long-winged* see *macropterous*]. An animal with long wings or fins.

macropteran (mak-rō-p'et-er-an), *a.* Same as *macropterous*.

macropterous (mak-rō-p'et-er-us), *a.* [*< Gr μακρόπτερος, long-winged, < μακρός, long, + πτερόν, wing, = E feather*]. Long-winged, macropteran, longpennine or longpennate, as a bird.

Macropus (mak-rō-pus), *n.* [NL, *< Gr μακρόπους, long-footed* see *macropod*]. 1. The typical genus of *Macropodidae*, established by Shaw in 1800. *M. major* is the giant kangaroo, or forester. See *forester*, 4, and cut under *kangaroo* —2. A generic name which has been variously used for certain fishes, birds, insects, and crustaceans, but is no longer in use, being antedated by the same name in mammalogy.

Macropygia (mak-rō-pī-gī-a), *n.* [NL (Swainson, 1837), *< Gr μακρός, long, + πύγξ, rump, tail*]. A genus of *Columbidae*, including many species of the East Indies and Australia, of large size with long, broad tail, such as *M. reinwardti*, the cuckoo-doves.

macropyramid (mak-rō-pī-rā-mīd), *n.* [*< Gr μακρός, long, + πυραμῖς, pyramid*]. A pyramid of an orthorhombic crystal lying between the zone of unit pyramid and the macrodomes.

A new pyramid is produced, named a *macropyramid*. *Kneyc Brit*, XVI, 300.

Macrorhamphosidae (mak-rō-ram-fōs'i-dē), *n. pl.* [NL, *< Macrorhamphosus + -idae*]. A family of hemibranchiate fishes, typified by the genus *Macrorhamphosus*. They have the body compressed, armed with bony plates anteriorly and especially on the back, a long tubiform snout, abdominal ventral fins with a spine and 7 rays, and a distinct dorsal fin at or behind the middle of the length. The family consists of few species and two genera, the leading one of which is *Macrorhamphosus* or *Centrosus*. *M.* or *C. scutatus* inhabits especially European seas, north to the southern coast of Great Britain, but has also been found on the Massachusetts coast. These fishes are known as *trumpet-fish*, *bellows-fish*, *snipe-fish*, *woodcock-fish*, and *sea snipe*. Also called *Centrosidae*.

macrorhamphosoid (mak-rō-ram-fōs'oid), *a.* and *n.* [*< Macrorhamphosus + -oid*]. 1. a. Pertaining to the *Macrorhamphosidae*, or having their characters.

II. *n.* One of the *Macrorhamphosidae*.

Macrorhamphosus (mak-rō-ram-fō'sus), *n.* [NL, *< Gr μακρός, long, + ῥάμφος, a bill, beak, + L term -osus, E -ose, -ous*]. The typical genus of *Macrorhamphosidae*, established by Lacépède in 1802, commonly called *Centrosus*.

Macrorhamphus (mak-rō-ram'fus), *n.* [NL, *< Gr μακρός, long, + ῥάμφος, a bill, beak*]. A leading genus of *Scolopacidae*, founded by Stephens in 1824; the robin-snipes or web-toed snipes. The bill is exactly as in the true snipes (*Gallinago*), but the feet are semipalmate, the wings are long and pointed, the tail is doubly emarginate and has only 12 rectrices, the tibiae are naked below, and the tarsus is longer than the middle toe and claw. In the pattern

and changes of plumage the species resemble sandpipers. *M. griseus* is the common red breasted or gray backed snipe or dowitcher of North America. Also written *Macroramphus*.

macrorhine (mak-rō-rīn), *a.* [*< Gr μακρόρρινος (-rīn-), long-nosed, < μακρός, long, + ῥίς, snout (-rīn-), nose*]. Having a long nose or snout.

Macrorhinus (mak-rō-rī'nus), *n.* [NL, *< Gr μακρόρρινος, long-nosed, < μακρός, long, + ῥίς (rīn-), nose*]. 1. A genus of *Phocidae*, of the subfamily *Cystophorinae*, characterized by the proboscis of the male; the elephant-seals or sea-elephants. *M. elephantinus* or *leoninus* is an enormous phocid found on the coasts and islands of southern South America. *M. angustirostris* is named by Gill as a distinct species.

2. A genus of coleopterous insects.

macroscelidan (mak-rō-sel'i-dan), *a.* Having the characters of the *Macroscelididae*.

Macroscelididae (mak-rō-sel'i-dēz), *n.* [NL (Sir A. Smith, 1829), *< Gr μακροσκελής, long-legged, < μακρός, long, + σκέλος, leg*]. The typical genus of the family *Macroscelididae*. It contains the typical elephant shrews, such as *M. proboscideus*. Nine species have been described, all African. Probably *M. macroscelus*. See cut under *elephant-shrew*.

Macroscelididae (mak-rō-sel'i-dē), *n. pl.* [NL, *< Macroscelides + -idae*]. A family of small terrestrial salient insectivorous mammals, of mouse-like aspect, with soft pelage, and the hinder limbs fitted for leaping (as in the jerboas) by the elongation of the leg and metatarsus, the tibia and fibula being ankylized below. The species are African, and known as *elephant shrews*, *elephant mice*, and *jumping-shrews*. There are two genera, *Macroscelides* and *Petrodromus*. Also *Macroscelidae*.

Macroscopis (mak-rōs'kō-pis), *n.* [NL (Humboldt, Bonpland, and Kunth, 1818), so called in allusion to the large scales of the crown, *< Gr μακρός, long, + σκέπας, covering*]. A small genus of asclepiadaceous plants of the tribe *Cynanchaeae*. The tube of the fleshy corolla is thick, and the five-lobed limb is very spreading, a crown of five scales is inflexed in the throat. The stigma is depressed. The genus embraces 3 or 4 closely related species of twining, high climbing shrubby plants covered with bristly hairs, ranging from Peru to Central America. One or more of the species furnish the aromatic bitter drug *cundurango*.

macroscian (mak-rōs'kī-an), *a.* and *n.* [*< Gr μακρόσκιος, having a long shadow, < μακρός, long, + σκία, shadow*]. 1. a. Casting a long shadow, as persons or objects in high latitudes.

II. *n.* One who casts a long shadow, specifically, an inhabitant of the arctic or the antarctic zone so called because objects near the poles intercept the sun's rays at a very low angle, and therefore cast very long shadows. Compare *antiscean*.

macroscopic (mak-rō-skōp'ik), *a.* [*< Gr μακρός, long, large, + σκοπεῖν, view*]. Same as *macroscopic*.

macroscopical (mak-rō-skōp'ik-al), *a.* [*< macroscopic + -al*]. Same as *macroscopic*. *Quain, Med Diet*, p. 892.

macroscopically (mak-rō-skōp'ik-al-i), *adv.* In the naked eye, by superficial inspection, as distinguished from minute or microscopic inspection, without the use of magnifiers.

macroseptum (mak-rō-sep'tum), *n.*, *pl. macrosepta* (-tā) [NL, *< Gr μακρός, long, + L septum, a partition* see *septum*]. A large perfect septum or mesentery of an actinozoan, furnished with reproductive organs opposed to *microseptum*.

macrosiphon (mak-rō-sī-fon), *n.* [NL, *< (Gr μακρός, long, + σίφων, siphon* see *siphon*]. The large horny internal (endoceratitic) siphon or funnel of some cephalopods. See *macrosiphonula*.

macrosiphonula (mak-rō-sī-fon'u-lā), *n.*, *pl. macrosiphonulae* (-lā) [NL, *dim of macrosiphon*]. The larval stage of certain cephalopods, as nautiloids, during which the large endoceratitic siphon makes its appearance. *Hyatt, Proc Bost. Soc Nat Hist*, 1887.

macrosiphonular (mak-rō-sī-fon'ū-lār), *a.* [*< macrosiphonula + -al*]. Pertaining to or of the nature of a macrosiphonula. *Amer Nat*, XXII, 878.

macrosomite (mak-rō-sō-mīt), *n.* [*< Gr μακρός, long, + σόμα, body* see *somite*]. A large somite or primitive metamere; one of the larger primary segments or divisions of the embryo of some insects, preceding the formation of the definitive metameres, or macrosomites. *Amer Nat*, XXII, 941.

macrosomitic (mak-rō-sō-mīt'ik), *a.* [*< macrosomite + -ic*]. Of the nature of a macrosomite; pertaining to a macrosomite. *Amer Nat*, XXII, 941.

macrosporange (mak-rō-spō-ran), *n.* [*< NL macrosporangium, q. v*]. Same as *macrosporangium*.

macrosporangiphore (mak-rō-spō-ran'jī-fōr), *n.* [NL, *< Gr μακρός, long, large, + σπορά, seed, + ἄγχιον, vessel, + -φορος, < φέρω = E bear*]. The envelop or foliage-leaf about or bearing the macrosporangium.

The foliage leaves, the envelopes of the spore bearing leaves the micro and *macrosporangiphore* had become permanently differentiated in ascending order. *Geddes, Encyc Brit*, XVI, 840.

macrosporangium (mak-rō-spō-ran'ji-um), *n.*; *pl. macrosporangia* (-a) [NL, *< Gr μακρός, long, + σπορά, seed, + ἄγχιον, vessel*]. A sporangium containing macrospores. It is homologous with the ovule of flowering plants. Also called *gonotheca*.

The microspores doubtless through the intervention of a spore eating insect, had come to germinate upon the *macrosporangium* instead of upon the ground. *Geddes, Encyc Brit*, XVI, 840.

macrospore (mak-rō-spōr), *n.* [*< Gr μακρός, long, + σπορά, seed* see *spore*]. 1. In bot., an asexually produced spore of large size as compared with others belonging to the same species. It is the female spore, and is homologous with the embryo sac of phanerogams. See *heterosporous* and *microspore*, and cut under *Amnites*.

In some of the living club mosses there are two kinds of spores, one being much larger than the other. The larger are known as *macrospores*, whilst the smaller are called *microspores*. *Huxley, Physiography*, p. 241.

2. In zool., one of the spore-like elements, few in number, but of relatively large size, into which the bodies of many monads become subdivided. Also *megaspore*.

Macrosporium (mak-rō-spōr'i-um), *n.* [NL, *< Gr μακρός, long, + σπορά, seed*]. A genus of ascomycetous fungi with erect, basal, pedicellate, and at length septate spores.

macrosporoid (mak-rō-spōr'oid), *a.* [NL, *< Gr μακρός, long, + σπορά, seed, + εἶδος, form*]. Resembling or related to the genus *Macrosporium*.

macrosporophyl, **macrosporophyll** (mak-rō-spōr'ō-fil), *n.* [NL, *< (Gr μακρός, long, large, + σπορά, seed, + φάλλων, leaf*]. The leaf-bearing macrosporangium of the heterosporous *Pteridophyta*, the homologue of the carpel in the *Phanerogama*.

Macrostachya (mak-rō-stak'i-a), *n.* [NL, *< Gr μακρός, long, + σταχυς, stachys* see *stachys*]. A genus of fossil plants established by Schimper (1869), belonging to the *Clammaria* or *Equisetaria*. They are arborescent plants, with appressed linear leaves. The leaf scars are marked upon the articulations by transversely oval rings, like the links of a chain, the scars of the branches are ventrally, large, round, umbonate with a stigmataloid ventral mamillum, the spikes are very large cylindrical, the bracts are lanceolate, costate in the middle imbricate, scarcely longer than the internodes. Fourteen species are known, ranging from the Lower Carboniferous to the Permian and occurring in Saxony, Prussia, Bohemia, Silesia, France, England, and Spain, as well as in Pennsylvania, West Virginia, Illinois, and Arkansas.

Macrostoma (mak-rō-stō-mā), *n. pl.* [*< Gr μακρός, long, + στόμα, mouth*]. A family of tricheliped gastropods with a very large mouth or aperture to the shell, such as those of the genera *Stomatia* and *Stomatella*. Lamarck, 1812. Also *Macrostomata*, *Macrostomina* (Jenyns, 1836), and *Macrostomida*.

macrostome (mak-rō-stōm), *n.* [*< Gr μακρός, long, + στόμα, mouth*]. A gastropod whose shell has a very wide or patent aperture, as one of the *Halotitida*.

Macrostomidae (mak-rō-stōm'i-dē), *n. pl.* [NL, *< Macrostoma + -idae*]. Same as *Macrostoma*.

Macrostomum (mak-rōs'tō-mum), *n.* [NL, *< Gr μακρός, long, + στόμα, mouth*]. A genus of rhabdocelous tubellarians, among the simplest of the *Apocrita*. It has no protrusible buccal proboscis. The male and female organs are united in the same individual, but open by separate apertures. **macrostyle** (mak-rō-sīl), *a.* [*< Gr μακρός, long, + στυλος, pillar* see *style*]. In bot., having an unusually long style.

macrostylopore (mak-rō-sīl'ō-spōr), *n.* [NL, *< Gr μακρός, long, large, + στυλος, pillar, + σπορά, seed*]. In bot. a stylopore of large size as compared with others of the same species. See *stylopore*.

Macroterarsi (mak-rō-tār'sī), *n. pl.* [NL, *< Gr μακρός, long, + τάρσος, any broad, flat surface* see *tarsus*]. In Illiger's classification (1811), a family of his *Pollicata*, including the tarsier and certain of the lemurs.

macroterasian (mak-rō-tār'si-an), *a.* and *n.* [As *Macroterarsi + -an*]. 1. a. Having long tarsi.

II. *n.* An animal that has long tarsi.

Macrotrarsius (mak-rō-tār'si-us), *n* [NL. see *Macrotrarsus*.] Same as *Cursorius*.

macrothere (mak-rō-thēr), *n* An animal of the genus *Macrotherium*

Macrotheriidae (mak-rō-thē-ri'-i-dē), *n. pl* [NL., < *Macrotherium* + -idae] A family of large fossil edentate mammals established for the reception of the genera *Macrotherium* and *Ancylotherium*, remains of which occur in the Miocene of France and Greece, and indicate a generalized type of edentates

macrotherioid (mak-rō-thē-ri-oid), *a* [*< Macrotherium* + -oid] Resembling or related to the macrotheres

Macrotherium (mak-rō-thē-ri-um), *n.* [NL., < Gr. μακρός, long, + θήριον, a wild beast] The typical genus of *Macrotheriidae*. It is supposed to represent the oldest type of edentates. It has rootless and enamelless teeth, immense claws, and apparently no dermal armor. Remains occur in the Miocene of France

macrothin (mak-rō-tin), *n* Same as *cinicifugus*

Macrotis (mak-rō-tis), *n* [NL., < Gr. μακρός, long, + οὐς (-us) = *E. ear* see *Otus*] 1 A genus of bandicoots of the family *Peramelidae*, having long pointed ears like those of a rabbit, proportionally longer hind limbs than the typical bandicoots, the hallux wanting, the tail long and hairy, and the pouch opening forward. *M. lagotis* is called the native rabbit in Australia, from its size and general appearance. — 2 A genus of tenebrionine beetles. Dejean, 1833

macrotome (mak-rō-tōm), *n* [*< Gr. μακρότομος*, cf. μακρότομος, cut long (said of shoots so pruned), < μακρός, long, + τέμνω, τέμνω, cut] An apparatus by the aid of which gross sections may be made of a specimen for anatomical purposes

macrotone (mak-rō-tōn), *n.* [*< Gr. μακρός*, long, + τόνος, tone. Cf. Gr. μακροτόνος, stretched out, < μακρός, long, + τέννω, stretch] Same as *macron*

macrotous (mak-rō-tus), *a* [*< MGr. μακρότης*, long-eared, < Gr. μακρός, long, + οὐς (-us) = *E. ear*] Long-eared

Macrotrachia (mak-rō-trā-ki'-h), *n. pl* [NL., so called in allusion to the siphons, < μακρός, long, + τράχεια, trachea. see *trachea*.] A tribe of *Dithyra* or bivalves characterized by the elongated siphons, embracing the families *Pholadidae*, *Myidae*, *Tellinidae*, etc. *Swainson*, 1840

macrotypous (mak-rō-ti-pus), *a* [*< Gr. μακρός*, long, + τυπος, form. see *type*] In mineral, having a long form

Macroure, macroure, etc. See *Macrura*, etc.

Macrozamia (mak-rō-zā-mi-ā), *n* [NL. (Miquel, 1842), so called in allusion to the sterile appearance of the male fructification, < Gr. μακρός, large, + ζαμία, loss.] A genus of gymnosperms belonging to the natural order *Cycadaceae*, the tribe *Encephalata*, and the subtribe *Encephalata*, characterized by the female cones having hard peltate scales, usually produced into an erect acuminate blade. They are low forms, with an erect ovoid or cylindrical trunk covered by the persistent bases of the petioles, living in swampy places near the sea and have pinnate leaves resembling the fronds of tree ferns, or occasionally twisted in some species, and large cones. About 11 species are known, all inhabitants of tropical and temperate Australia, several of these are cultivated for ornament. From their general appearance, plants of this genus sometimes receive the name of fern-palm. *M. spicata* is the burrawang nut. See *under Cycadaceae*

macrozoogonidium (mak-rō-zō-gō-nid'-i-um), *n*; *pl. macrozoogonidia* (-ā) [NL., < Gr. μακρός, long, large, + ζῳον, an animal, + NL. gonidium, q. v.] In bot., a zoogonidium of large size as compared with others of the same species, as those produced by certain fresh-water algae

The protoplasmic contents of certain cells (of *Hydrodictyon*) break up into a large number of daughter cells (*macrozoogonidia*) there being often as many as 7000 to 20,000. *Benny*, Botany, p. 223.

macrozoospore (mak-rō-zō-spōr), *n* [*< Gr. μακρός*, long, + ζῳον, an animal, + σπορα, seed. Cf. *zoospore*.] 1 In *zoöl*, a macrospore

The macrozoospore soon acquires a thin cell wall, through which the cilium protrude

Huxley and Martin, Elementary Biology, p. 391

2 In bot., a zoospore of large size as compared with others produced in the same species

In some cases the protoplasm of the cell (of *Hematozoocoeus*) divides only once or twice, the result being the formation of two or four relatively large zoospores, called macrozoospores. *Wiese*, Physiology of Plants, p. 605

Macrura (mak-rō-rā), *n. pl.* [NL., neut. pl. of *macrurus*, long-tailed. see *macrurus*.] A subordinal or superfamily group of stalk-eyed tho-

racostaceous crustaceans of the order *Decapoda*, containing those which are long-tailed, as the lobster, crawfish, prawn, shrimp, etc., distinguished from *Brachyura* and *Anomura*. The abdomen is long, muscular, flexible, and covered with a hard, segmented shell. It bears usually six pairs of appendages, the last modified into a caudal fin or swimming tail. Both pairs of feelers are long and filiform, the inner pair are always exerted, and the outer have often a modified exopodite as an appendage at the base. Also spelled *Macroure*.

macrural (mak-rō-rā), *a* [As *macrurus* + -al] Same as *macrurus*

macruran (mak-rō-rān), *n* [*< Macrura* + -an.] A member of the group *Macrura*

Macruridae (mak-rō-ri-dē), *n. pl* [NL., < *Macrurus* + -idae.] A family of anacanthine fishes, typified by the genus *Macrurus*. It consists of gadoids which have an elongated tail tapering backward and without a separate caudal fin, a postpectoral anus, enlarged suborbital bones, an inferior mouth, unbrachial ventral fins, a distinct anterior dorsal, and a long second dorsal and anal. The family includes about 15 deep-sea fishes, of 5 genera, known as *grenadiers*, *rattails*, etc.

macruroid (mak-rō-roid), *a. and n.* [*< Macrurus* + -oid] 1. A pertaining to the *Macruridae*, or having their characters

2. A member of the family *Macruridae*. **macrurus** (mak-rō-rus), *a* [*< NL. Macrurus*, long-tailed, < Gr. μακρός, long, + οὐρά, tail] Long-tailed, longicaudate

Macrurus (mak-rō-rus), *n* [NL. see *macrurus*.] 1 In *ichth*, the typical genus of *Macruridae*, having a long tapering tail. *M. fabricius*,

Grenadier or Onion fish (*Macrurus vulgaris*)

the rattail, and *M. (Coryphænodon) rupestris* are the two best known, both inhabiting deep water of the North Atlantic. *Bloch*, 1787

2 A genus of dipterous insects. *Loey*, 1864

mactation (mak-tū-shon), *n.* [= OF. *mactatio*, < LL. *mactatio* (n-), a killing for sacrifice, < *mactare* (> *l. mactare* = Sp. *pag. mactar* = OF. *mactar*), offer for sacrifice, sacrifice, immolate, kill, slaughter] The act of killing a victim for sacrifice. [Rare]

Here they call (and a offering, which is described and allowed to be the first fruits of the ground only, *thouan*, a sacrifice or mactation

Shuckford, On the Creation, Pref., p. ciii

mactator (mak-tā-tor), *n* [*< L. mactator*, a slayer, < *mactare*, sacrifice, kill. Cf. *mactador*, from the same source.] One who kills a victim for sacrifice. [Rare]

Mactra (mak-trā), *n* [NL., < Gr. μακτρα, a kneading-trough, < μάσσειν (√ μακ), knead. see *macerate*.] The typical genus of the family *Mactridae*. Upward of 100 species are described, of world wide distribution. *M. (or Spisula) solidissima* is a large species with a thick heavy shell, five or six inches long, abundant along the Atlantic coast of the United States on sandy beaches. It is known as the *surf clam*, *sea clam*, and *hen clam*, and is used for soups and chowders

Mactracea (mak-trā-sē-ā), *n. pl.* [NL., < *Mactra* + -acea] 1. A family of accephalous or bivalve mollusks, comprising the genera *Mactra*, *Lutraria*, *Crassatella*, *Erycina*, *Ungulina*, *Solemya*, and *Anphidesma*, and scattered in several different families. *Lamarck*, 1809 — 2. Now a suborder or superfamily of bivalves, including only the family *Mactridae* and related forms

mactracean (mak-trā-sē-an), *a. and n.* [*< mactraceous* + -an] 1. A Mactraceous

2. A member of the family *Mactridae*.

mactraceous (mak-trā-she-us), *a* [*< Mactra* + -aceous] Having the characters of the *Mactridae*, mactroid

Mactridae (mak-tri-dē), *n. pl.* [NL., < *Mactra* + -idae.] A family of siphonate bivalve mol-

luskas, typified by the genus *Mactra*, the round-clams or trough-shells. The shell is equivalve, trigonal, and alveolar, and has generally close fitting valves. The hinge is characteristic, that of the left valve having a V shaped cardinal tooth closing into two divergent branches of the right valve's cardinal tooth. The mantle is open in front, and the long united siphonal tubes are fringed with tentaculiform processes. The foot is linguiform. The *Mactridae* are mostly marine shells of wide distribution. They are also called *Mactroidea*, *Mactridae*, *Mactraceae*, and *Mactrinæ*.

Mactra stultorum (right valve)

mactroid (mak-troid), *a. and n.* [*< Mactra* + -oid.] 1. *a.* Of or pertaining to the *Mactridae*.

2. *n.* A member of the family *Mactridae*.

macuca (ma-kū-kā), *n.* [S. Amer.] A large tinamous of South America, *Tinamus major*.

macula (mak-ū-lā), *n*; *pl. maculae* (-lā). [L., a spot, stain: see *macle*, *markle*, *macule*, *maill*.] A spot; a blotch. Specifically — (a) A temporary or permanent discoloration of a larger or smaller piece of skin, as by excess or lack of pigment, by extravasation of blood, by telangiectasis, by localized hyperemia, or otherwise. (b) A dark area on a luminous surface, specifically on the disk of the sun or of the moon. A solar macula is usually called a *sun-spot*

And lastly, the body of the sun may contract some spots or *maculae* greater than usual, and by that means be darkened. *T. Burnet*, Theory of the Earth

Cerebral maculae. See *cerebral* — *Macula acustica*, the somewhat opaque spot in the utricle of the membranous labyrinth where the branches of the auditory nerve enter it — *Macula cribrosa*, the sieve like spot, a patch of minute foramina in the fovea hemispherica of the vestibule of the ear, through which filaments of the auditory nerve pass. *Macula germinativa*, the so called germinal spot or macula, or Wagnerian corpuscle, the nucleolus of an ovum — *Macula lutea*, the yellow spot of the retina of the eye, an oval yellow patch, about 1/16 of an inch in diameter, on the retina opposite the pupil, and the position of most distinct vision. See *retina*

macular (mak-ū-lar), *a* [*< Mactra* + -ar.] Spotted; exhibiting or characterized by spots. as, a *macular* condition or appearance.

maculate (mak-ū-lāt), *v. t*; *piet* and *pp. maculated*, *ppr. maculating*. [*< L. maculatus*, pp. of *maculare*, spot, speckle, < *macula*, a spot. see *macula*, *macule*.] To spot, stain, blur

They blush, and think an honest act
Dooth their supposed virtues *maculate*
Martens, Satires, iii. 50

For Warts, we rub our Hands before the Moon,
and commit any *maculated* Part to the Touch of the Dead
Bourne's Pop. Antiq. (1777), p. 97

Maculated fever. See *fever*

maculate (mak-ū-lāt), *a* [*< L. maculatus*, pp. of *maculare*, spot, speckle, < *macula*, a spot. see *macula*, *macule*.] Spotted, marked with spots, blotted, hence, stained; defiled; impure.

Arm. My love is most immaculate white and red
Moth. Most *maculate* thoughts master, are masked under such colours
Shak, L. L. L., i. 2. 97

Oh vouchsafe,
With that thy rare green eye, which never yet
Beheld thing *maculate*, look on thy virgin!
Fletcher (and another), Two Noble Kinsmen, v. 1

maculation (mak-ū-lā-shon), *n* [= It. *maculazione*, *maculazione*, < L. *maculatio* (n-), a spotting, spot, < *maculare*, spot. see *maculate*.] 1. The act of spotting, or the state of being spotted — 2. The manner of spotting, or the pattern of the spots with which an animal or plant is marked

Patches of vividly red Poppies, with fine black *maculae* like eyes, edged with white
Amer. Nat., XXII. 642.

The *maculation* is normally noctuidous, and the wings are ample
Seenes, IV. 44

3 A staining, defilement, smirching.

For I will throw my glove to Death himself,
That there's no *maculation* in thy heart
Shak, T. and C., iv. 4. 66.

To suffer it to start out in the life of her son was in a manner to publish again her own obliterated *maculation*
The Atlantic, LVIII. 448

maculatory (mak-ū-lā-tō-ri), *a*. [*< maculate* + -ory.] Defiling, staining

The luteal, spumy, *maculatory* waters of sin
Rev. T. Adams, Works, I. 166 (*Davies*)

maculature (mak-ū-lā-tūr), *n* [= F. *maculature* = Sp. *maculatura*, as *maculate* + -ure.] 1 A waste sheet of printed paper. *E. Phil.* 1706. — 2 Blotting-paper. *Coles*, 1717.

macule (mak-ū-l), *n. and r* Same as *macule*. **maculose** (mak-ū-lōs), *a* [*< L. maculosus*, spotted. see *maculatus*.] Marked with spots, spotted, maculated.

madder¹ (mad'ēr), *n.* [*< ME. mader*, *< AS. maderc*, *madder* = *D. mader*, *mec* = *Ice. madder*, *madder* The *Ir mader*, *madra*, *madder*, is ap-

1 Branches of Madder (*Rubia tinctorum*) with flowers and fruits.
2 The rhizome a, a flower, b, the pistil; c, two different fruits.

par. < E. *madder*. Cf. Skt. *madhura*, the name of several plants, < *madhura*, sweet, tender, < *ma-dhu*, sweet: see *mead* 1. 1. A plant of the genus *Rubia*, natural order *Rubiaceae*, yielding a valuable dyestuff of the same name. The ordinary dyers' madder is *R. tinctorum*, native of the Mediterranean region, a climbing herbaceous, or at the base somewhat shrubby plant, with whorls of dark green leaves and panicles of small yellowish 4-5-merous flowers, and with long succulent perennial roots. It was formerly esteemed as an emmenagogue and diuretic. *R. cordifolia*, of India, eastern Asia, and parts of Africa, affords garancin, and is used for the same purposes as European madder. It forms the madder of India, the Bengal madder or munjeet. *R. perigrina* is the proper wild madder of England, found throughout western and southern Europe. 2. A dyestuff and pigment obtained from the roots of *Rubia tinctorum* and other plants of the same family. It yields colors of the greatest permanence, and is employed in dyeing linen and cotton red. Two kinds are fixed upon cotton: one is called *madder red*, and the other, which possesses a much higher degree of luster and fixity, is called *Adrianople red*, because it is largely exported from that city, or *Turkey red*, from the fact that for a long time it was mainly obtained from the Levant. It is also produced near Leghorn and Trieste. In the trade this madder bears the name of *alcizar* or *alcari*. The roots are broken up by means of wooden stampers, which reduce the bark and splint-bark to powder, leaving the hard inner part unbroken, but the whole root is sometimes pulverized. The coloring principle of madder is termed *alcizarin*. Madder contains also a red pigment, *purpurin* or *rubacin*, which is extracted in the form of orange-colored prismatic crystals, and yields a good dye, either alone or in combination with alizarin. Through the peculiar chemical affinity of phosphate of lime for its coloring matter, madder is noted for its remarkable physiological effect of turning red the bones of animals to which it is fed, as well as the claws and beaks of birds. — **Brown madder**, a lake prepared from madder root, having a rich brown color of great depth. — **Capucine madder**. See *capucine* 2. — **Flowers of madder**, the trade-name for a preparation made by steeping pulverized madder, causing the sugar it contains to ferment, then washing the residue, pressing out the water, drying, and pulverizing it again. It is used for dyeing purposes in the same manner as ordinary madder. Also called *refined madder* and *madder bloom*. — **Indian madder**, (a) *Rubia cordifolia*. (b) *Oldenlandia umbellata*. (c) Some species of the genus *Heptagyna*. — **Madder-brown**. See *brown*. — **Madder-carmin**, a pigment made by precipitating the coloring matter of the madder root upon a base of alumina. — **Madder color**, a pigment derived from madder or its compounds. Madder colors range from brown, through yellow, rose, and red, to deep purple, and are much used in dyeing and the fine arts. — **Madder lakes** (pink madder, rose madder, madder lake, purple madder, brown madder, Rubens's madder, madder yellow, madder orange), lakes prepared from madder varying in shade from pink through red and yellow to purple and brown. These are also known as *rubric lakes*. — **Madder-red**. See def. 2. — **Madder style**, a method of calico-printing in which the parts of the cloth which are to receive a madder color are printed with a mordant, washed and rinsed in a solution of alum and size, and then drawn through a colored solution with which the fixed mordant has been applied, after which the dye is washed off the unmordanted part of the cloth. Also called *chambré style*, *garancin style*. — **Petty madder**, a plant of the genus *Crucifera*, of the Mediterranean region. Also called *crosswort*. — **Refined madder**. Same as *flowers of madder*. — **Wild madder**, (a) *Rubia perigrina*. (b) The white bedstraw, *Galium mollugo*.

madder¹ (mad'ér), *v t* [*< madder*¹, *n.*] To dye with madder.

Madeira mahogany. Same as *canary-wood*. **Madeiran** (ma-dá-ran), *a*. [*< Madeira* (see def.) + *-an*.] Of or pertaining to the island of Madeira, or to the group of islands of which it is the chief, lying west of Morocco, and belonging to Portugal.

Madeira-vine (ma-dá-rá-vin), *n*. An elegant climbing herb with bright-green fleshy leaves, long clusters of small white spicy-fragrant flowers, and a perennial tuberous root. It is a cheyopodiaceous plant, *Boussingault*

His large deep-blue eye, *madid* and yet piercing, showed that the secretions of his brain were apportioned half to voluptuousness, half to common sense.

Diarrail, Coningsby, I. 2.

Madies (mā-dī'ē-ē), *n.* [NL. (A. P. de Candolle, 1836), < *Madia* + *-ae*] A subtribe of composite plants, typified by the genus *Madia*, comprised in the tribe *Helianthoides*. It is characterized by radiate or subradiate heads, the ray-flowers being fertile, and the disk flowers perfect (but some or all of them are sometimes sterile), the bracts of the involucre in one series, partly or wholly inclosing the achenia of the ray flowers, the chaff of the receptacle in one or two rows, free or united, generally none between the central flowers, and the achenia of the rays without pappus. The subtribe embraces 8 genera and about 30 species, the majority growing in the western part of North America.

madisterium (mad-is-tē'ri-um), *n.*, pl. *madisteria* (-ā). [*Gr. madiōterion*, tweezers for pulling out hair, < *madiōter*, pull out the hair. Cf. *madāv*, fall away, as the hair: see *madarostis*.] A surgical instrument for extracting hairs; a pair of tweezers.

madling (mad'ling), *n.* [*mad*¹ + *-ling*¹.] A mad person. [Obsolete or prov. Eng.]

Good for naught *madling*! flinging t' precious gifts o' God under foot. *E. Brontë*, *Wuthering Heights*, xiii.

madling², *a.* An obsolete form of *madling*.
madly (mad'li), *adv.* In a mad manner. (a) Without reason or understanding. (b) Frantically, furiously. (c) With extreme folly, or inflated zeal or passion.

madman (mad'man), *n.*, pl. *madmen* (-men). A man who is insane, a distracted man; a lunatic, a crazy person.

madnep (mad'nep), *n.* [Appar. < *mad*¹ + *nep*¹.] A tall umbelliferous plant, *Heracleum Sphondylium*, of Europe and subarctic regions.

madness (mad'nes), *n.* 1. The state of being mad or distracted, insanity, lunacy.

For as to him who Cotts did upbraid,
And call'd his rigour *madness*, raging fits.
Content thou, thou unskilful man, he said,
My *madness* keeps my subjects in their wits.

Daniel, *Civil Wars*, vii.

And moody *madness* laughing wild
Amid severest woe.

Gray, *Prospect of Eton College*.

2. Headstrong passion or rashness, ungovernable fury or rage, extreme folly.

To lose myself upon no ground were *madness*,
Not loyal duty.

Fletcher (and another), *False One*, I. 2.

Party is the *madness* of many for the gain of a few

madonna (ma-don'ā), *n.* [It. = *F. madame*, my lady; see *madam*, *madame*.] 1. My lady, madam, an Italian title of address or of courtesy, equivalent to *madam*.

Cloem. Good *madonna*, why mournest thou?
Olivia. Good fool, for my brother's death.

Shak, *T. N.*, I. 5. 72.

Specifically — 2. [*cap*] The Virgin Mary ("Our Lady"); hence, a picture representing the Virgin — 3. A kind of luster made in part of alpacawool. — **Madonna medal**, a small medal of silver, brass, or other metal, hung by a pilgrim about the neck of a statue of the Virgin and then preserved, serving as a sort of pilgrim's sign.

Madonna-wise (ma-don'ā-wīz), *adv.* In the manner or fashion of the Madonna, applied to the arrangement of a woman's hair, in imitation of accepted representations of the Madonna, by parting it in the middle, and bringing it close and low over the temples.

Locks not wide disspread,
Madonna-wise on either side her head.

Tennyson, *Isabel*.

madoqua (mad'ō-kwā), *n.* [Abyssinian] A very tiny antelope of Abyssinia, *Neotragus salinus* or *N. madoqua*, the smallest of horned animals, about as large as a hare, and with very slender legs. Also called *negoleh*.

madpash (mad'pash), *n.* and *a.* [*mad*¹ + *pash*.] 1. *n.* A mad fellow. *Wright* [North. Eng.]

II. *a.* Wild, cracked. *Davies*.

Let us leave this *madpash* bedlam, this hair-brained top, and give him leave to rave and dote his bellyfull, with his private and intimately acquainted devil.

Urquhart, *tr. of Rabelais*, iii. 25.

madras (ma-dras'), *n.* [= *F. madras*, so called from *Madras* in India.] A large handkerchief of silk and cotton, usually in bright colors, used by the negroes in the West India Islands and elsewhere for turbans, etc. — **Madras gingham**, a gingham imitating the colors and design of a *madras*. — **Madras lace**, a kind of curtain-material, sometimes printed in colors. — **Madras work**, simple embroidery done upon bright-colored madras handkerchiefs,

the embroidery emphasizing the pattern of the stuff. These embroideries are used for furniture-coverings, baner screens, etc.

madrasah (ma-dras'), *n.* [Hind. *madrasa*, *madarsa*, a school, college.] In India, a school or college for the education of youth. Also, corruptly, *madressah*, *madrissah*, *madriessa*, *madressen*.

The enlightened mind of Warren Hastings did indeed anticipate his age by founding the Calcutta *madrasa* for Mahometan teaching.

Encyc. Brit., XII. 774.

Madras hemp, *n.* See *Benjal hemp*, under *hemp*.
madregal (mad'rē-gal), *n.* [Origin not ascertained.] A carangoid fish of the genus *Servola*.
madreperl (mad're-pērl), *n.* [*It. madreperla*, < *madre*, mother, + *perla*, pearl.] Mother-of-pearl. *Longfellow*.

Madrepore (ma-drep'ō-rā), *n.* [NL., < *madre*, mother, + *por*, pore.] The typical genus of *Madreporidae*, containing some of the commonest madrepores, of various branched shapes, among them some of the most extensive reef-building corals. *M. cervicornis* is a species so called from its branching like the antlers of deer.

Madreporaceae (mad'rē-pō-rā'sē-ā), *n.* pl. [NL., < *Madrepore* + *-acea*.] A group of stone-corals, more or less exactly equivalent to *Madreporaria*.

madreporal (mad'rē-pō-ral), *a.* [*madrepore* + *-al*.] Of or pertaining to madrepores; consisting of madrepores.

Madreporaria (mad'rē-pō-rā'ri-ā), *n.* pl. [NL., < *Madrepore* + *-aria*.] A general name of the madrepores and related corals which are hexacoralline or hexactinoid and have a continuous hard calcareous skeleton. The term covers not only the *Madreporidae* proper, but the *Fungidae* or mushroom corals, the *Astridae* or star corals, and related families. In a still wider sense, *Madreporaria* is an order of the class *Actinozoa*, including all the hard actinoid or actiniform corals or sclerodermatous zoantharians, whether hexamerous or tetramerous, and whether tabulate, tubulose, perforate, aporose, or rugose. It is then equivalent to *Litho corallia* and *Sclerodermata*, or to the old *Lithophyta* minus the *Aleyonaria* and other scleroblastic zoantharians.

madreporian (mad'rē-pō-rā'ri-an), *a.* and *n.* 1. *a.* Pertaining to the *Madreporaria*, or having their characters.

II. *n.* A coral of the group *Madreporaria*.
madrepore (mad'rē-pōr), *n.* [*F. madrepor* = *Sp. madrepora* = *Pg. madrepora*, < *It. madrepora*, coral, appar. lit. 'mother-stone' (cf. *madreperla*, 'mother-pearl,' mother-of-pearl; see *madreperl*), < *madre*, < *L. mater*, = *E. mother*, + (appar.) *Gr. πόρος*, a light friable stone, a stalactite, or, as now understood, πόρος (> *It. poro*), pore; see *por*².] An animal, or a coral, of the genus *Madrepore* or family *Madreporidae*, the polypite or the polypidom of a perforate madreporian, a name loosely extended to any stone-coral with madreporeform cavities or openings. In true madrepore the animal or polypite is hexamerous with twelve short tentacles, and the polypidom is of branching form and stony hardness. Madrepore coral consists of carbonate of lime, with traces of animal matter, and is formed by gradual deposition in the tissues of the compound polyp, so that in course of time the whole presents the appearance of a number of polyps supported on an extraneous body. When the animal matter has been removed madrepore is of a white color, wrinkled on the surface, and full of little cavities, in each of which an individual polyp was lodged, the radiating septa of the cavities corresponding to the internal divisions of the animal. Madrepores raise up walls and reefs of coral rocks with considerable rapidity in tropical climates. — **Madrepore glass**. See *glass*. — **Madrepore marble**, madreporeitic marble.

madreporeic (mad'rē-pōr'ik), *a.* [*madrepore* + *-ic*.] Of or pertaining to madrepore, of the character of the madrepore; pierced with minute holes like a madrepore. Also *madreporeite*. — **Madreporeic canals**, in echinoderms, tubular prolongations of the circular vessel of the ambulacral system, having perforated ends, and terminating in a calcareous network, or other hard formation, known as the *madreporeic*

Madrepore Corals.

body, *madreporeic tubercle*, or *madreporeite*. — **Madreporeic plate**, in echinoderms, a madreporeite. — **Madreporeic tubercle**, a tubercular madreporeite body, or madreporeite.

Madreporidae (mad'rē-pōr'i-dē), *n.* pl. [NL., < *Madrepore* + *-idae*.] The madrepore family, typified by the genus *Madrepore*. Its limits vary with different authors, but in the strictest use it consists of several different genera agreeing in that the polypites and polyp-stocks have porous caninomyces, perforated theca, little-developed septa, and an open gastric cavity communicating with the canal in the axis of the branched polypidom.

madreporeiform (mad'rē-pō-rī-fōrm), *a.* [*NL. Madrepore*, a madrepore, + *L. forma*, form.] Resembling a madrepore, characteristic of a madrepore, madreporeic.

Madreporinæ (mad'rē-pō-rī-nē), *n.* pl. [NL., < *Madrepore* + *-inæ*.] A subfamily of *Madreporidae*.

madreporeite (mad'rē-pō-rī-tē), *n.* and *a.* [*madrepore* + *-ite*².] I. *n.* 1. Fossil madrepore. — 2. In echinoderms, the madrepore body or tubercle, the interradial alboral porous plate at the termination of the madrepore canals. *Hurley*.

II. *a.* Same as *madreporeic*.
madreporeitic (mad'rē-pō-rī-t'ik), *a.* [*madreporeite* + *-ic*.] Pertaining to or consisting of madreporeite, or made up of various corals more or less mixed with fragments of the shells of mollusks, all loosely clasped together as madrepores as, *madreporeitic rocks*.

madrier (mad'rī-ēr), *n.* [*F. earlier madre*, a beam or stout plank, < *Sp. madero*, a beam, < *madera*, wood; see *mater*.] In *milit. engin.* (a) In the seventeenth century, a heavy timber forming the chief or central part of the carriage of a cannon or mortar, hence, the whole carriage or mounting of a piece of artillery. (*Grose*) (b) A plank lined with tin and covered with earth for roofing over certain parts of military works, in order to afford protection in lodgments, etc. (c) A plank used to support the earth in a mine, or in a moat or ditch to support a wall.

madrigal (mad'rī-gal), *n.* [*F. madrigal* = *Sp. madrigal*, *Osp. mandrial*, *mandrial* = *Pg. madrigal* = *G. madrigal*, < *It. madrigale*, (*Olt. madriale*, *mandriale*, also *mandriano*, a short poem, a pastoral ditty (> *ML. matrule*), < *mandra*, a herd, flock, < *L. mandra*, a stall, a herd, < *Gr. μάδρα*, a fold, an enclosed space, the bed on which the stone of a ring is set, a monastery. Cf. *archi-mandrite*, *mandrit*, from the same *Gr. source*.] 1. A medieval poem or song, amorous, pastoral, or descriptive. The distinguishing characteristics of the madrigal are now hard to determine.

By shallow rivers to whose falls
Melodious birds sing *madrigals*
Marlowe, *Passionate Shepherd to his Love*.

2. In *music* (a) A musical setting of such a poem. Strict madrigal writing involves the use of a *canto fermo*, adherence to one of the ecclesiastical modes throughout, the abundant use of contrapuntal imitation in all its varieties, and the absence of instrumental accompaniment. This form of composition appeared in the Low Countries in the fifteenth century, and soon spread to Italy, Germany, France, and England. In Italy and England it attained a notable perfection and beauty, passing over in the latter country into the modern glee. Madrigals were written for from three to eight or more voices. The sentiments embodied varied from grave to gay, with a constant tendency to the latter. The choruses in the earlier operas and oratorios were madrigals. (b) A glee or part-song in general, irrespective of contrapuntal qualities.

madrigaleri (mad'rī-gal-ēr), *n.* A writer or composer of madrigals.

Satyrists, panegyricists, *madrigalliers*
Tonn. Brown, *Works*, II. 155. (*Davies*)

madrigaletto (mad'rī-gal-ē-tō), *n.* [It., dim. of *madrigale*, a madrigal; see *madrigal*.] A little madrigal.

madrigalian (mad-rī-gā'li-an), *a.* [*madrigal* + *-ian*.] Of or pertaining to madrigals.

The English *madrigalian* writers being represented solely by Morley's "My Bonny Lass." *Athenæum*, July 8, 1882.

madrigalist (mad'rī-gal-ist), *n.* [*madrigal* + *-ist*.] A composer or singer of madrigals. *Burney*, *Hist. Music*, IV. 46.

Madriñenian (mad-rī-lē'nī-an), *a.* and *n.* [*Sp. Madriñen* (for "Madridaño", the second d being changed by dissimilation to ñ), an inhabitant of Madrid, < *Madrid*.] I. *a.* Of or belonging to Madrid.

II. *n.* A native or an inhabitant of Madrid, the capital of Spain.

madroño (ma-drō'nvō), *n.* A handsome tree, *Arbutus Menziesii*, of western North America, toward the south becoming a shrub. It bears a

yellow berry, scarcely edible. Its wood is very hard, and is much used in the manufacture of gunpowder. Its bark is valuable for tanning. Also *madroña*.

Even the *madroña*, upon these spurs of Mount Saint Helena, comes to a fine bulk, and ranks with forest trees. R. L. Stevenson, *Silverado Squatters*, p. 88.

madstone (mad'stōn), *n.* A stone popularly reputed to cure hydrophobia, or to prevent it when threatened. It is applied to the wound, from which it is supposed to draw the poison. The belief in its value has no scientific sanction. [U. S.]

Among the various individuals in Pennsylvania who profess ability in exorcism and charms, we occasionally find one who is reputed to possess a *mad-stone*. These pebbles are of various sizes, and appear to have been selected on account of some peculiarity of color or form. A specimen which had a high reputation in the State from which it had been brought was described by the present writer as consisting of a worn piece of white felspar, and possessing none of the properties of absorption attributed to it. *Proc. Am. Phil. Soc.*, XXVI (1890), 386.

madu-nut (mad'ū-nut), *n.* The seed of *Cycas circinalis*.

Madura foot. A diseased condition of the feet and hands, occurring in India, characterized by enlargement and distortion of the affected part, ensuing suppuration, softening and fracture of the bones of the part, and the formation of sinuses discharging through frequent openings small yellow bodies like fish-roe or dark grains like coarse gunpowder, and often larger masses. The fungus *Chromypha Carteri* is found in the diseased parts, and is thought to be the cause of the disease. Also called *fungus-foot*, *fungus disease of India*, and *mycetoma*.

madweed (mad'wēd), *n.* A species of *Scutellaria*, or skullcap (natural order *Labiata*), the *S. lateriflora* so named because it was thought to be efficacious in hydrophobia. Also called *mad-dog skullcap*.

madwort (mad'wört), *n.* [*< mad + wort*]. Cf. *Alyssum*. 1. A plant of the genus *Alyssum*. 2. [As if a contraction of *madderwort*, having been used as a substitute for madder.] A plant of the borage family, *Asperugo procumbens*, whose root was used like madder; commonly called *German madwort*.

mae (mā), *a* and *adv.* A Scotch form of *mo*.

maendert, *n.* See *meander*.

Maendrina (mē-an-drī'nā), *n.* [NL., *< L. maender*, a winding way (see *meander*), + *-ina*]. The typical genus of *Maendrinidae*, established by Lamarck in 1801. *M. cerybriformis* is an example. Also spelled *Meandrina*.

maendrine, *a.* See *meandrine*.

Maendrinidae (mē-an-drī'nī-dē), *n. pl.* [NL., *< Maendrina + -ida*]. A family of madreporarian corals of the suborder *Isidacea*, typified by the genus *Maendrina*, the brain-corals or brainstones. These corals are of massive form, caused by the union of many individual corallites in rows which meander or wind about over the surface of the corallum in a manner suggesting the convolutions of the brain. Also spelled *Meandrinidae*.

maendriniform (mē-an-drī'nī-fōrm), *a.* [*< NL. Maendrina + -ia*]. Resembling a brain-coral, or of pertaining to the *Maendriniformes*.

Maendriniformes (mē-an-drī'nī-fōrm'ōz), *n. pl.* [NL., see *maendriniform*]. The brain-corals. See *Maendrina*.

Maendripora (mē-an-drī'pō-rā), *n.* [NL., *< Gr. μαενδριος*, a winding way (see *meander*), + *πόρος*, a pore. see *pori*]. Same as *Fascicularia*.

Meandrospongiae (mē-an-drō-spon'jā-dē), *n. pl.* [NL., *< Gr. μαενδριος*, a meander, + *σπόγγος*, a sponge, + *-idae*]. A large family of dictyonine hexactinellid silicious sponges, both fossil and recent, in which the body consists of winding tubes of uniform caliber with interstitial vestibular spaces and no uncinat or acopuliform spicules. Also spelled *Meandrospongiae*.

maelstrom (māl'strōm), *n.* [An erroneous spelling (sometimes erroneously explained as 'mill-stream'), prop. **malestrom* or **malstrom*, formerly *malestrand* (see *quot*), simulating *strand*], *< Norw. malstrøm* (little used) (= Dan. *malstrøm*), a great whirlpool in the sea, *< mala* (= Dan. *male*), grind (see *meal*), + *strøm* (= Dan. *strøm*), stream (see *stream*). 1. A celebrated whirlpool or violent current in the Arctic ocean, near the western coast of Norway, between the islands Moskenesø and Mosken, formerly supposed to suck in and destroy everything that approached it at any time, but now known not to be dangerous except under certain conditions.

He [Osip Napai] reports of a Whirlpool between the Rost Islands and Isotof call'd *Maestrand*, which from half ebb to half flood is heard to make such a terrible noise as shakes the Door rings of Houses in those Islands ten mile off. *Milton*, *Hist. Muscovia*.

Hence — 2. Any resistless movement; any influence or passion which makes victims of all who come within its power as, the *maelstrom* of fashion or of speculation, the *maelstrom* of dissipation or of crime.

magazine-rifle (mag-a-zēn'rifl), *n.* A repeating rifle, a rifle from which several shots may be fired in quick succession without reloading. It has a magazine or chamber which contains a variable number of metallic case cartridges, which are fed automatically into the chamber of the bore, or held in reserve, the latter being the case in arms furnished with a cut off, to enable them to be used as single-loaders. The magazine may be placed in the butt-stock, in the tip stock or above or on one side of the receiver, or it may be detachable, as in the Lee gun. The special forms of magazine-rifles are very numerous.

magasinist (mag-a-zē'nist), *n.* [*< magazine + -ist*] Same as *magaziner*.

magdala (mag-dā'lā), *n.* [So called from *Magdala* in Abyssinia, captured by Gen. Napier (subsequently Lord Napier of Magdala) in 1868. Cf. *magenta*, *solfarino*, named from battle-fields] Naphthalene red. See *red*.

magdalen, **magdalene** (mag'da-len, -lēn), *n.* [So called from *Magdalen*, Mary *Magdalene*, < *LL. Magdalene*, < *Gr. The allusion in the def. is to the "woman in the city, which was a sinner," mentioned in Luke vii. 37-50, and, as in the heading of that chapter, traditionally identified (esp. since the 5th century, and in the Western Church, contrary to the tradition of the Eastern Church) with Mary *Magdalene* as mentioned (in another connection) in the next chapter,

"Mary called *Magdalene*, out of whom went seven devils" (Luke vii. 2). This identification was doubtless assisted by a confusion of the three anointings, one by "a woman in the city" (Luke vii. 37, as above), one by "a woman," also unnamed, in Bethany (Mat xxvi. 7 and Mark xiv. 3), and the third by "Mary," the sister of Martha and Lazarus, also in Bethany (John xi. 2 and xii. 3). The same name, in the old form *Maudlin*, is the source of the adj. *maudlin*, in allusion to the tears of the repentant woman supposed to be Mary *Magdalene*—see *maudlin*. Any supposed supernatural art; especially, the pretended art of controlling the actions of spiritual or superhuman beings. Belief in such an art exists among all primitive races, and was prevalent in medieval Europe. The practice of magic has embraced, in a great variety of ways, the cure of disease, the forecasting of events, and the gratification of desires otherwise unattainable. It has been everywhere, with the rise and earlier progress of literature, formulated into more or less elaborate systems. All kinds of divination, judicial astrology, and to a large extent alchemy were outgrowths of it.

But through his *magik* for a wyke or tweyp,
It seemed that alle the rokkes were aweye.
Chaucer, Franklin's Tale, l. 567
If she in chains of *magic* were not bound
Shak, Othello, I. 2. 65

The word *magic* is still used, as in the ancient world, to include a confused mass of beliefs and practices, hardly agreeing except in being beyond those ordinary actions of cause and effect which men accustomed to their regularity have come to regard as merely natural.

Encyc. Brit., XV 199

2 Power or influence similar to that of enchantment as, the *magic* of love

Magic circle, a modification of the magic square as devised by Franklin, consisting of eight concentric circles equally divided by eight radii, in the sections of which all the numbers from 14 to 75 are so arranged that the sum of the numbers in each circle, together with 12 entered at the center, is equal to 960, and that the sum of the numbers in each radial column, together with the central 12, is also equal to 960. As reconstructed by Dr. Barnard, the numbers from 1 to 64 are taken, and are so arranged that the constant sum of both concentric and radial ranks, added to 100 entered at the center, is 960. — **Magic cube**, an extension of the arrangement of an arithmetical series in a magic square or parallelepipedon to all sides of a hexagon, so that the sum of the numbers in each lineal rank of numbers, parallel to the edges of the cube or the diagonals upon all faces, is constant. In a perfect magic cube every term enters into thirteen distinct equalities. — **Magic cylinder**, a modification of a perfect magic cube or parallelepipedon when one of its surfaces is transferred to a cylinder having a circumference equal to the edge of the cube and the vertical squares are arranged in equidistant radii such a magic cylinder will have either no number at the axis, or the same number in the center of every one of the five parallel planes. — **Magic lantern**. See *lantern*, and cut under *stereopticon*. — **Magic music**. See *music*. — **Magic sphere**, a modification of a magic cube or parallelepipedon when its surface is transferred to a sphere, and the several vertical columns are arranged in equidistant radii. — **Magic square**, a square figure

formed by a series of numbers in mathematical proportion, so disposed in parallel and equal ranks that the sum of each row or line taken perpendicularly, horizontally, or diagonally is constant. Magic squares are also formed

Laws have no *magical* no supernatural virtue laws do not act like Aladdin's lamp or Prince Ahmed's apple
Macaulay, Essays, II 97

Egypt and Babylon were the chief sources whence the world learnt what may be called the higher branches of occult science, and from the historical point of view the *magical* rites and beliefs of other ancient Eastern nations, such as Asia Minor and India, are of little importance.
E. B. Tylor, *Encyc. Brit.*, XV 201

magically (maj'-i-kal-i), *adv.* In a magical manner, by or as if by magic.

magician (maj'-ish'-an), *n.* [*< ME magicien*, < OF *magicien*, < ML *magicianus*, as if **magicianus*, < *magia*, magic see *magic*.] 1. One of the Magi or priestly caste of ancient Persia.

It is confessed by all of understanding, that a *magician* (according to the Persian word) is no other than Divinorum cultor et interpres, a studious observer and expounder of divine things.
Raleigh, Hist. World, I. xl. 3.

Therefore made I a decree to bring in all the wise men of Babylon before me. Then came in the *magicians*, the astrologers, the Chaldeans, and the soothsayers.
Dan iv 7

2. One skilled in magic, a wizard, an enchanter, a conjurer

I have, since I was three year old, conversed with a *magician*, most profound in his art and yet not damnable
Shak, As you Like It, v. 2. 68.

magic-tree (maj'-ik-trē), *n.* A beautiful shrub, (*Antea buxifolia* (natural order Polemoniaceae)), of Peru, formerly used by the native Indians for the decoration of their houses on feast-days.

magilp (mā'-gilp'), *n.* [Also *magilp*, *magilph*, *magelp*, *magulp*, *meggelup*, *megilph*, *megylph*, *miqulph*, said to be from a proper name.] In painting, a vehicle made of oil of turpentine and pale drying-oil in equal proportions. These ingredients gelatinize, and when mixed with oil colors give them a certain body and a pulpy transparency. Magilp may be made also of linseed drying-oil and mastic varnish, or of simple linseed oil and sugar of lead, or of boiled oil mastic varnish, and a little sugar of lead. Also spelled *megilp*.

magilp (mā'-gilp'), *v. t.* To reduce to the consistency of magilp.

If [pure water] is well mixed with the oil colour, it *magilps* it sufficiently to hold the colouring until it sets.
Workshop Receipts, 1st ser., p. 421

Magilus (maj'-i-lus), *n.* [NL.] A remarkable genus of gastropods of the family *Corallophoridae*, in which the shells when young are regularly spiraled, but grow with the coral into irregular tubes, the older parts of which are left by the mollusk to become filled in with solid deposits of calcareous matter. The species is named *M. antiquus*, and may attain a length of 2 or 3 feet.

Magism (mā'-jizm'), *n.* [= F. *magisme*, as *Magie*, *Magi*, + *-ism*.] The body of philosophy or doctrines of the Persian Magi same as *Magianism*.

Chaldaism and Magism appear mixed up together
C. O. Muller, Manual of Archaeol. (trans.), § 248.

magister (mā'-jis'tēr), *n.* [*< L. magister*, a master, chief, head, superior, director, teacher, etc. hence ult. E. *master* and *master*, *q. v.*] Master; sir: an appellation given in the middle ages to persons of

scientific or literary distinction, equivalent to the modern title of *doctor*. It is still used in Latin forms of various degrees. (See below.) In the early church it was given as a title to bishops and presbyters, in distinction from *ministers* or members of the lower orders.

I'm *Magister*—yea, Doctor—hight.
I'm cleverer, true, than those fops of teachers,
Doctors and *Magisters*, Scribes and Preachers.
Goethe, Faust, I. 1 (tr. by B. Taylor).

Artium Magister, Master of Arts, a degree bestowed by universities and colleges, following the degree of *Baccalaureus* or *A. B.* Also *Magister Artium* (*M. A.*). See *A. M.* — **Magister ceremoniarum**, master of the ceremonies. — **Magister Disciplinæ**, an officer in the Church of Spain, about the fifth century, appointed to take charge of those children who were dedicated to the church at an early age and placed in a bishop's household for instruction in morals and in the rules of the church. The officer who had supervision of children educated in monasteries bore the same title. — **Magister Sacri Palatii**, in the Rom. Cath. Ch., the incumbent of an office created early in the thirteenth century by Pope Honorius III for the religious instruction of the employees of the popes, cardinals, and other Roman Catholic authorities living in Rome. The promoter and first holder of the office was St. Dominic, and later incumbents have been Dominicans. The duties and privileges of the office were gradually increased until it became one of very considerable importance. Among its privileges are that of conferring the degree of doctor in theology and philosophy and that of licensing books for publication.

magisteria, *n.* Plural of *magisterium*.

magisterial (maj'-is-tē'-ri-al), *a.* [*< L. magisterium*, the office of a chief, president, master, director, teacher, etc. (see *magistry*), + *-al*.] 1. Of or pertaining to a master; such as befits a master, authoritative; hence, lofty; arrogant, imperious, domineering.

Those who have fairly and truly examin'd, and are there by got past doubt in all the doctrines they profess and govern themselves by, are so few in number, and find so little reason to be *magisterial* in their opinions, that nothing insolent and imperious is to be expected from them.
Locke, Human Understanding, IV. xvi. 4.

The Squire is there
In his large arm chair,
Leaning back with a grave *magisterial* air
Barham, Ingoldsby Legends, I. 172.

2. Of or belonging to a magistrate or his office; of the rank of a magistrate.

Acacanth here
When *magisterial* duties from his l. me
Her father call'd, had entertain'd the guest.
Glover, Athenaid, xv

3. In *chem.*, pertaining to magistry — **Magisterial district**. See *district*, 1 = Syn. 1. *Authoritative, Magisterial, Dogmatic, Arrogant, Domineering, Imperious, Dictatorial, Peremptory*, official, grand, haughty, lordly, oracular. *Authoritative* is rarely used in a bad sense. *Magisterial*, in the sense of having the manner of a master or magistrate, generally indicates the overdoing of that manner as, *magisterial pomp* and gravity. *Dogmatic* reaches somewhat more deeply into the character, the *dogmatic* man insists strenuously upon the correctness of his own opinions, and, being unable to see how others can fail to believe with him, *dictatorially* presses upon them his opinions as true without argument, while he tends also to blame and rebuke those who venture to express dissent. (See *confident*.) *Arrogant* implies the assumption of more than due authority from an overestimate of one's importance. (See *arrogance*.) *Domineering, imperious, and dictatorial* apply to the assertion of one's own will over those of others in the attempt to rule. *Domineering* suggests unfitness or lack of authority to rule, with an insulting, hectoring, or bullying manner. *Imperious* contains most of the real power of the will, suggesting a lofty or lordly determination to be obeyed. *Dictatorial* implies, on the one hand, a disposition to rule, and, on the other, a sharp insistence upon having one's orders accepted or carried out. *Peremptory* shuts off discussion, a peremptory command or denial is one that must be obeyed or accepted to the letter and without debate, it is positive, absolute, and often immediate.

magisteriality (maj'-is-tē'-ri-al-i-ti), *n.* [*< magisterial + -ity*.] *Magisterial* character or administration; domination.

When these statutes were first in the state or *magisteriality* thereof, they were severely put in practice.

Fuller, Church Hist., IX. iv 11 (*Daniel*)

magisterially (maj'-is-tē'-ri-al-i), *adv.* In a magisterial manner; in the manner of a master or a magistrate; with the air of a master or the authority of a magistrate.

magisterialness (maj'-is-tē'-ri-al-nea), *n.* The character of being magisterial, in any sense of that word.

magisterium (maj'-is-tē'-ri-um), *n.*; pl. *magisteria* (-i). [*L. see magistry*.] 1. In alchemy, a magistral; the philosopher's stone.

This is the day I am to perfect for him
The *magisterium*, our great work, the stone.
B. Jonson, Alchemist, I. 1.

2. An authoritative statement or doctrine, a magistry.

Great importance is attached to what is called "the consensus of theologians" and the "ordinary magisterium or teaching of the Church."

Moore, Nineteenth Century, XXII. 44.

magistry (maj'-is-tē'-ri), *n.*; pl. *magistries* (-ries). [Formerly also, erroneously, *magestery*;

This last was not a *magistry*, but a mere command
Brougham

2 In *alchemy*, a *magisterium* or *magistral*, in *chem.*, one of various extracts or preparations, especially *magisterium bismuthi*, a precipitate formed when water is added to a solution of bismuth in nitric acid. See the quotations from Boyle and Boerhaave.

He that hath had Water turned to Ashes hath the
Magistry, and the true Philosopher's Stone
Howell, *Lectures*, I vi 41

Although *magistry* be a term variously enough employed by chemists, and particularly used by Paracelsus to signify very different things, yet the best notion I know of it is, that it is a preparation whereby there is not an analysis made of the body assigned, nor an extraction of this or that principle, but the whole or very near the whole body, by the help of some additament, greater or less, is turned into a body of another kind.
Boyle, *Works*, I 687

Magistries seem to have been thus called by the ancient chemists as denoting the capital production or master piece of their art. They pretend that they are able to take any simple body, and without any change of its weight, or division of its parts, alter it into another exceedingly different from the former, and usually liquid; for instance, to reduce an ounce of gold into a fluid of the same weight, by fire alone, without the addition of any other matter.
Boerhaave, *Chemistry* (tr. by Shaw, 3d ed., 1753), I 171

3† Any kind of medicine or remedial agency asserted to be of exceptional efficacy

magistracy (maj'-is-trā-si), *n.* [*magistra*(te) + -cy.] 1. The office or dignity of a magistrate.

In all tyrannical governments the supreme *magistracy*, or the right both of making and of enforcing the laws, is vested in one and the same man, or one and the same body of men.
Blackstone, *Com.* I ii

We have no power to make laws, to erect all sorts of *magistracy*, to correct, punish, pardon
Wendrop, *Hist. New England*, II 341

The most real diversity of method is of *method* referred to use, and method referred to progression whereof the one may be termed *magistral*, and the other of probation.
Bacon, *Advancement of Learning*, II

II, *n.* 1†. In *alchemy* and *old med.*, a sovereign medicine or remedy

I finde a vast chaos of medicines, a confusion of receipts and *magistral*s, amongst writers, appropriated to this disease
Burton, *Anat. of Mel.*, p 382.

2. In *fort.*, the guiding line from which the position of the other lines or works is determined. In field-fortifications this line is the interior crest-line. In permanent fortifications it is usually the line of the top of the escarp of each work. *Farrow* More fully called *magistral line*

3. An officer in cathedral and collegiate churches and royal chapels in Spain, generally a canon, whose duty it was to preach a certain course of sermons — 4 (Sp. pron. ma-his-träl'). Copper pyrites or other sulphureted ores of copper roasted at a carefully regulated temperature with free access of air. It is used in the Mexican "patio process" (which see, under *process*).

magistrale (mā'-is-trä'-le), *a.* [It. = E. *magistral*.] See *stretto*

magistrality (maj'-is-träl'-i-ti), *n.* [*magistral* + -ity.] Magistral character, conduct, or teaching; magisterial air or authority.

Those who seek truths, and not *magistrality*
Bacon, *Advancement of Learning*, II.

magistrally (maj'-is-träl-i), *adv.* Authoritatively; magisterially. *Purchas*, *Pilgrimage*, p. 203

2. An administrator of the law, one who possesses jurisdiction or executive authority in matters of civil government, an executive or judicial officer holding the power of decision and disposal in regard to subjects within his cognizance as, a king is the first *magistrate* of a monarchy, in the United States the President is often called the chief *magistrate*, the *magistrates* of a state or city, civil or judicial *magistrates*. But the word is more particularly applied to subordinate officers to whom some part of executive judicial power is committed or delegated

We acknowledge that the civil *magistrate* wears an authority of Gods giving, and ought to be obey'd as his viceregent.
Milton, *Church Government*, I 5

3 Specifically, a minor judicial officer, a justice of the peace, or a police justice, in Scotland, a provost or a bulle of a burgh as, to be brought before the bar of the local *magistrate* — 4 In the New Testament, a Roman military governor or pretor — Chief *magistrate*. See def 2

mag-loon (mag'-lon), *n.* The speckled loon or red-throated diver, *Colymbus septentrionalis* [Prov. Eng.]

magma (mag'-mä), *n.* [NL, < Gr. *μάγμα*, a kneaded mass, a salve, < *μάσσειν* (√ *pay*), knead see *mass* 2 Cf. *magdalen*] 1 Any crude mixture, especially of organic matters, in the form of a thin paste — 2 In *med.* (a) The thick residuum obtained after subjecting certain substances to pressure to extract the fluid parts (b) The grounds which remain after treating a substance with water, alcohol, or any other menstruum (c) A salve of a certain degree of consistency *Dunghlson* — 3. A confection — 4 In *petrol.*, the ground-mass or basis of a rock, that part which is amorphous or which has no decidedly individualized contours, so far as can be made out from examination of thin sections with the aid of a microscope. It is in such an amorphous homogeneous magma or ground mass that the crystalline elements of many rocks are embedded. The term *magma* is also frequently used to designate molten or plastic material lying beneath the surface, which it is desirable to speak of, without any specific indication of its mineral character in discussing the phenomena of volcanism, metamorphism, etc.

Carrying out this idea still further, he [Durocher] propounded the theory that beneath the earth's solid crust there exist two *magmas*, the upper consisting of light acid materials, the lower of heavy basic ones, and he supposed that by the varying intensity of the volcanic forces we may have sometimes one or the other *magma* erupted and sometimes varying mixtures of the two

In its earlier use the word implies especially high courage and noble steadfastness of purpose, in its later use, high minded generosity

Magnanimity no doubt consisteth in contempt of peril, in contempt of profit, and in the meriting of the times wherein one liveth
Bacon, in *Spedding*, I 126

The favorite example of *magnanimity* among the Romans was Fabius Maximus who, amidst the provocation of the enemy and the impatience of his countrymen, delayed to give battle till he saw how he could do so successfully

magnesia (mag-nē'shē), *n.* [ME. *magnesia* (def. 1); < ML. *magnesia*, a mineral said to be brought from Magnesia, fem. of *Magnesus*, adj., pertaining to Magnesia, < *Magnesia*, Gr. *Μαγνησία*, a district in Thessaly (also the name of two cities in Asia Minor) see *magnet*. In def. 2 = F. *magnésie* = Sp. Pg. It. *magnesia*, NL. *magnesia*, *magnesia* (magnesium oxid), so called from a supposed relation to manganese (formerly called *magnesium*).] 1† A mineral said to be brought from Magnesia — 2 Magnesium oxid (MgO), a white tasteless substance having a feeble alkaline reaction. Its specific gravity varies from 3.07 to 3.61. It is nearly insoluble in water, and scarcely fuses at the temperature of the oxyhydrogen flame. It is prepared by the ignition of any magnesium salt of a volatile acid. Magnesia is used in medicine as an antacid and mild cathartic, and in the arts for preparing magnesium salts. *Magnesia alba*, the magnesia of the shops, is a hydrated magnesium carbonate. *Calcareous magnesia* is pure magnesia prepared by strongly heating the carbonate. — *Magnesia mica*. Same as *biotite*.

Magnesian¹ (mag-nē'shē-an), *a*. [*L. Magnesia*, < Gr. *Μαγνησία*, *Magnesia* (see def.), + -an.] Of or pertaining to Magnesia, an ancient city of Asia Minor, near Miletus, or to a town of the same name in ancient Lydia, or to a district so called in Thessaly.

magnesian² (mag-nē'shē-an), *a*. [*L. magnesia* + -an.] Pertaining to magnesia or having its qualities, containing or resembling magnesia. — *Magnesian limestone*. See *limestone*.

magnesian (mag-nē'shē-an), *a*. [*L. magnesia* + -ic] Of or pertaining to magnesia.

The tendency to fuse on the part of the mixture is due to the *magnesian* chloride. Ure, Dict., IV 648

magnesianoferrite (mag-nē'shē-ō-fer'it), *n*. [*L. magnesia* + *ferrum*, iron] An oxid of magnesium and iron, belonging to the spinel group, which has been observed at Vesuvius. Also *magnesianoferrite*.

magnesite (mag-nē'shē-it), *n*. [*L. magnesia* + -ite] 1 Native magnesium carbonate, a mineral occurring in white compact masses, less often in rhombohedral crystals. It belongs to the calcite group — 2† The hydrated magnesium silicate usually called *sepiolite* or *meerschaum*.

magnesium (mag-nē'shē-um), *n*. [NL., in def. 1, < Gr. *Μαγνησία*, see *liber*, *magnet*, in def. 2, < *magnesia*, 2.] 1† Manganese — 2 Chemical symbol, Mg, atomic weight, 24.36. The metallic base of the widely distributed alkaline earth magnesia, which in various combinations, and especially in the form of the double carbonate of lime and magnesia, is one of the most abundant of the materials which make up the earth's crust. It is a metal of a brilliant silver white color having a specific gravity of 1.75. It melts at a red heat, and boils at a temperature somewhat above that at which zinc volatilizes. When held in the flame of a candle it burns with a dazzling white light, which has been seen at sea at a distance of 24 miles. Magnesium was first prepared in a pure state by Bussy, that which had been previously obtained by Davy was impure and not a coherent metal. It is now manufactured on a large scale at various places, especially near Manchester in England and is pressed when in a semi fluid state into wire, and then flattened into ribbon, in which form it is generally sold. It is used in taking photographs in places into which the sunlight does not penetrate in signaling for naval and military purposes, and in pyrotechny, as well as in some operations connected with chemical analysis. The magnesian combinations are widely distributed in nature. From 5 to 6 per cent. of the solid material held in solution by the water of the ocean is magnesium sulphate, and from 8 to 11 per cent. magnesium chloride. Next to sodium, chlorine, and sulphuric acid, magnesium is the most abundant in gradient in solution in the ocean. It is, with rare exceptions (as in the case of the genus *Serpula*), not taken from the ocean by animal life, differing greatly in this respect from lime. Magnesium carbonate, in combination with calcium carbonate, forming dolomite occurs in enormous quantity among the stratified formations. Beds made up of almost chemically pure dolomite hundreds of feet thick cover thousands of square miles in the valley of the upper Mississippi. Magnesium carbonate also occurs in great abundance, mixed in varying proportions with the calcium carbonate in much of the rock designated as *marble* and *limestone*, which, when this fact becomes known by chemical analysis, are denominated *dolomitic*. Magnesia also plays the part of base in great numbers of silicates, especially in talc, meerschaum, serpentine, olivine, and the pyroxenes and hornblendes. Magnesian silicates form

an important part of numerous meteorites. The pure magnesium carbonate (magnesite) occurs in various localities, but is by no means an abundant mineral. The non silicate soluble compounds of magnesia are also of rather rare occurrence in nature, but are found in considerable quantity in a few localities, among which that in the vicinity of Stassfurt in Prussia is economically of by far the greatest importance. The combinations found there are karnite, carnallite and kieserite. (See these words.) Both magnesium sulphate and magnesium chlorid occur in the water of many mineral springs as well as in that of the ocean. The bones of animals and the seeds of various cereals contain a small amount of magnesium phosphate, and the salt is also found in guano. Magnesian salts are used to a limited extent in medicine, especially the sulphate (Epsom salt), they are also used in dressing cotton goods and in dyeing, but, on the whole, the economical importance of the combinations of magnesium, considering their abundance and the cheapness with which they could be furnished in large quantity, is exceedingly small.

magnesium-lamp (mag-nē'shē-um-lamp), *n*. A lamp in which magnesium is burned for the purpose of illumination. Such lamps are of various types, being adapted for the combustion of the metal in the form of a wire or ribbon or in a pulverized state.

magnet (mag'net), *n*. [*L. magnete* = D. *mag-net* = MHG. *magnet*, *magnete*, G. *magnet* = Dan. *Sw magnet* = OF. *magneto*, *manete* (the mod. F. term is *aimant* see *adamant*, *aymant*) = Sp. Pg. It. *magnete*, < L. *magnes* (magnet-) (with or without *lapis*, stone), a magnet, < Gr. *μάγνηξ*, also *μάγνησσα*, prop. adj., *Μαγνης*, *Μαγνήτις*, *Μαγνησία*, *Μαγνησσα* (see *liber*), a magnet, lit. stone of Magnesia, < *Μάγνηξ* (*Μαγνήτις*), also *Μαγνήτις*, an inhabitant of Magnesia, < *Μαγνησία*, *Magnesia*, a district in Thessaly, where the magnet or magnetic iron ore appar. first came to notice.] A body which possesses the property of attracting fragments of iron or steel, and which, when freely suspended, tends, under the action of the earth, to take a certain definite position, pointing approximately north and south. The lodestone, a variety of the mineral magnetite, or the native magnetic oxid of iron (Fe₃O₄), is a natural magnet, but the properties of the magnet are best shown by an artificial magnet (see below), which has commonly the form of a straight bar or that of a horseshoe. When a bar magnet is dipped into iron filings, it is found that they adhere most strongly at the extremities of the bar (which are called the *poles* of the magnet), and not at all along the line midway between them. Strictly speaking, however, except in the case of a long thin magnet the poles are not exactly at the ends. The middle line is called the *neutral line* or *equator* of the magnet, the straight line joining the poles is the *axis* of the magnet, or *magnetic axis*. A magnetic bar may abnormally have one or more intermediate points of maximum attraction, which are then

Steel Magnet with consequent poles at a and b

called *consequent poles*. Again, if a magnetic needle is suspended at its center of gravity so as to be entirely free to turn, it is found that in general it places itself with its axis in a direction nearly north and south, and with one end inclining downward. The pole which is directed toward the north is called the *north* or *north-seeking pole*, also the *boreal*, *positive*, or *red pole*, or *marked end* of the needle, the other the *south*, *south-seeking*, *austal*, *negative*, or *blue pole*, or *unmarked end*. It is found, further, that the like poles of two magnets repel and unlike poles attract each other. If a magnet is broken into halves, each half is found to be a complete magnet with a north and a south pole and this is true no matter how often the process of division is repeated. On this and other more fundamental grounds, it is concluded that the magnetic polarity belongs to each molecule throughout the bar, and the maximum attraction observed near the ends is only the resultant effect of all these individual forces. (See *magnetism*.) A *magnetic substance* is one which may be attracted by a magnet, but has not the property of attracting other magnetic substances, and therefore has no polarity. Soft iron is a magnetic substance, as is also most magnetite, the lodestone variety being exceptional. A *permanent magnet* is one which retains its magnetism after the magnetizing influences (see below) cease to act. Steel and the lodestone have this property, on account of their high degree of coercive force. (See *coercive*.) Soft iron has very little coercive force, and accordingly its power of retaining magnetism is small. An *artificial magnet* (as a compass needle) is made by contact with other magnets, and the methods employed are described as *single-touch*, *double-touch*, and *separate-touch*, according to the way in which the substance to be magnetized is rubbed by the magnets. Such a magnet may also be made by magnetic induction without actual contact. (See *induction*, 6.) Again, a magnet may be made by passing a current of electricity through a wire wound about the bar to be magnetized, this is called an *electromagnet* (which see). By this means magnets of very great strength may be made. They have usually a horseshoe form, and the bar is of soft iron, so that it retains its magnetism only so long as the current is passing. The earth may be considered as a huge magnet, whose poles

are situated in the neighborhood of the geographical poles, though not coinciding with them, the north magnetic pole of the earth corresponds in polarity to the south-seeking pole of a magnetic needle. The action of the earth causes a freely suspended needle to set in a plane called the *magnetic meridian*, which in general makes an angle east or west of the geographical meridian (see *declination*), and with one pole (in the northern hemisphere, the north-seeking pole) inclined downward (see *dip of the needle*, under *dip*). The earth's magnetic force also serves to induce magnetism in masses of iron lying in or near the magnetic meridian. An iron ship is thus magnetized in the course of its construction. Similarly, iron columns, etc., are often found to be feebly magnetic. Magnetic properties belong also to some other compounds of iron besides the magnetic oxid, as pyrrhotite or magnetic pyrites (Fe₇S₈), and to some varieties of the native sesquioxid, hematite (Fe₂O₃), also to the magnetic metals nickel, cobalt, chromium, and manganese. Some varieties of platinum are strongly magnetic, and occasionally masses have polarity also, but this may be due to the large percentage of iron present, although all so called iron platinum does not show this property. Finally, it is found that a powerful electromagnet exerts an effect on all substances, in accordance with which they are divided into the two groups *paramagnetic* and *diamagnetic* (this is explained under *diamagnetism*). — **Compound magnet**. Same as *magnetic battery*. — **Deflecting-magnet**, a magnet used for deflecting a magnetic needle often attached to a galvanometer for the purpose of fixing the zero of the needle in a certain position, or for altering the sensitiveness of the needle by changing the magnetic field. Also called *zero magnet*, *deflecting-magnet*, and *deflector*. — **Horseshoe magnet**, a magnet having a form somewhat resembling a horseshoe (see figure), being bent so that the two poles are brought near together, and hence can act at the same time upon the keeper or armature. A horseshoe electromagnet commonly consists of two bobbins side by side, whose cores are connected at one end by a piece of soft iron. — **Moment of a magnet**. See *moment*. — **Permanent magnet**. See the definition. — **Portative force of a magnet**, the maximum weight which a magnet can support. — **Receiving-magnet**. Same as *relay magnet*. — **Relay-magnet**, or *relay*, in telegraph, a sensitive electromagnetic receiving instrument used to close a circuit in the receiving station, which contains a battery and a less sensitive receiving instrument, such as a sounder or a register, also used to retransmit a message over another section of the line. See *transmission*. — **Saturated magnet**. See *magnetism*. — **Solenoidal magnet**, a long and thin bar magnet, uniformly magnetized, whose poles are at or very near the ends. In such a magnet the distribution of the magnetism is said to be solenoidal, in distinction from the lamellar distribution of a magnetic shell (which see, under *magnetic*). — **To arm a magnet**. See *arm*. — **To make the magnet**. See *make*.

Pertaining to the magnet or to magnetism; possessing the properties of the magnet as, a magnetic bar of iron, a magnetic needle.

The magnetic axis of the magnet is the line joining the two poles, and the direction of the magnetic axis is reckoned from the negative pole towards the positive one.

Atkinson, tr. of Mascart and Joubert, 1 285

2. Pertaining to the earth's magnetism as, the magnetic north, the magnetic meridian. See phrases below — 3. Having properties analogous to those of the magnet; attractive; winning.

Doubtless there is a certain attraction and *magnetism* force betwixt the religion and the ministerial forms thereof. Milton, Church Government, 1 3

Magnetic axis. See *magnet*. — **Magnetic azimuth**. field, the space through which the force or influence of a magnet is exerted; also, the space about a conductor carrying an electric current in which, as it may be shown, magnetic force is also exerted. Compare *magnetic shell* (below) and *magnetism*. — **Magnetic fluid**, a hypothetical fluid the existence of which was assumed in order to explain the phenomena of magnetism. — **Magnetic force**, the force exerted between two magnets, or, more definitely, between two magnetic poles. It is repulsive between like and attractive between unlike poles, and varies in intensity with the product of their strengths directly, and with the square of the distance between them inversely. — **Magnetic guard**. See *guard*. — **Magnetic induction**, the power which a magnet or a current of electricity possesses of exciting temporary or permanent magnetism in such bodies in its vicinity as are capable of receiving it. See *induction*, *d*. — **Magnetic-induction capacity**. Same as *magnetic permeability*. — **Magnetic intensity**. Same as *magnetic force*. — **Magnetic limit**, the temperature beyond which a magnetic metal ceases to be affected by the magnet. For iron this is the temperature of bright-red heat, for cobalt it is above that of white heat, for nickel it is about 350° C. — **Magnetic magazine**. Same as *magnetic battery*. — **Magnetic matter**, an imaginary substance possessing magnetic properties, the distribution of which in a magnet is conceived by Sir William Thomson to represent magnetic polarity.

It will very often be convenient to refer the phenomena of magnetic force to attractions or repulsions mutually exerted between portions of an imaginary *magnetic matter*, which, as we shall see, may be conceived to represent the polarity of a magnet of any kind.

Sir W. Thomson, *Elect. and Mag.*, p. 351.

Magnetic meridian, moment, etc. See the nouns. — **Magnetic needle**, any small magnetized iron or steel rod turning on a pivot, such as the needle of the mariner's compass. — **Magnetic north**, that point of the horizon which is indicated by the direction of the magnetic needle. It is seldom the true north. See *magnetic meridian*. — **Magnetic observatory**, a station provided with apparatus for making both absolute and differential determinations of the elements of the earth's magnetism, and at which systematic observations are maintained. The instruments used for absolute measures are the magnetometer for the declination and horizontal force, and the dip-circle for the inclination. The instruments used for differential measures are the declinometer, which shows the changes in the declination, and magnetometers, which register the variations in the horizontal and vertical components of the force. By the application of photography a continuous registration of these variations is obtained. — **Magnetic permeability**. See *permeability*. — **Magnetic points of convergence**, the magnetic poles of the earth, around which are drawn the isogonic lines, or lines of equal declination. — **Magnetic poles of the earth**, two nearly opposite points on the earth's surface, where the dip of the needle is 90°. They are at a considerable distance from the geographical poles of the earth. — **Magnetic potential**. See *potential*. — **Magnetic pyrites**, a bronze yellow magnetic iron sulphid, varying in composition from FeS_2 to Fe_2S_3 . Also called *pyrrhotite*. — **Magnetic resistance** or *reluctance*. See the nouns. — **Magnetic retentiveness**. Same as *coercive force*. — **Magnetic rotation of currents**, the dynamical effects, observed under suitable conditions, produced by a magnet in rotating a conductor carrying a current, or conversely of a stationary conductor traversed by a current in rotating a magnet. — **Magnetic rotatory power**, the rotation of the plane of polarization of a ray of light passing through a transparent medium in a powerful magnetic field. According to the direction of rotation, it is designated as + or - Verdet's constant for a given substance is the amount of rotation between two points whose difference of magnetic potential is 1 c.g.s. unit. See *polarization*. — **Magnetic scale**, a table or diagram exhibiting the paramagnetic and diamagnetic metals in the order of their strengths. — **Magnetic screen**, a soft iron shell—for example, in the form of a sphere—which, if of the proper thickness, cuts off a magnetic needle within from the effect of a magnet without. Such a screen is sometimes used to free a needle from the earth's force, so that it can obey the impulse of a current sent about it. — **Magnetic sense**, a supposed special sense by which magnetic influences are perceived.

Neither in my own case, nor in several others who tried, was anything felt that could be attributed to a *magnetic sense*.
Proc. Soc. Psych. Research, II, 58.

Magnetic separator, an apparatus or instrument for separating iron from other substances, as iron from brass filings, or scraps of nails or wire from wheat. *E. H. Knight*. — **Magnetic shell**, a magnet in the form of a very thin plate or sheet, the surfaces of which have opposite polarity. A thin slice of a cylindrical bar-magnet would be a magnetic shell, or, in other words, a bar-magnet may be thought of as made up of a great number of magnetic shells placed together with their poles facing in the same direction. A closed electric circuit—for example, a circular wire traversed by a current—is equivalent to a magnetic shell, and a series of such circuits, or practically a solenoid, has all the properties of a bar-magnet, and is surrounded by a similar field of force. — **Magnetic storm**, an abrupt disturbance of the equilibrium of the magnetic forces controlling a freely suspended magnetic needle, which is thereby thrown into rapid oscillation and displaced from its mean position usually observed simultaneously over a considerable portion of the earth, and hence inferred by some to be of cosmical origin. Magnetic storms are often accompanied by electrical earth-currents, observed, for example, as a disturbing element in connection with telegraph lines. They are most frequent during those periods (at intervals of about eleven years) when auroras are common, and both phenomena accompany the time of sun-spot frequency. — **Magnetic substance**. See *magnet*. — **Magnetic susceptibility**. See *susceptibility*. — **Magnetic telegraph**, the electric telegraph. See *telegraph*. — **Magnetic tick**, a faint metallic sound produced when an iron bar is rapidly magnetized or demagnetized.

When an iron or cobalt bar is magnetized it becomes longer and somewhat more slender, but does not appreciably alter in volume; it also emits a slight sound—a *magnetic tick*.
A. Demicheli, *Prin. of Physics*, p. 505.

Magnetic unit. See *unit*. — **Point of magnetic indifference**, that point of a magnet, about midway between the two extremes, where the attractive force, after continually diminishing as one proceeds from either pole, ceases altogether, the equator of the magnet.

II. n 1. Any metal, as iron, steel, nickel, cobalt, etc., which may receive the properties of the lodestone. — 2. A paramagnetic body, or one which, when free to turn in a magnetic field, sets its longest axis along the lines of magnetic force: in contradistinction to *diamagnetic*. See *diamagnetism*.

magnetical (mag-net'i-kal), *a* and *n* [*< magnetic + -al*] 1. *a*. 1. Same as *magnetic*. — 2. Exhaling or drawing out.

There is an opinion, that the moon is *magnetical* of heat, as the sun is of cold and moisture. Bacon, *Nat. Hist.*, § 75.

Magnetical amplitude. See *amplitude*.
II. *n* A substance that has magnetic properties; a *magnetic*.

Men that ascribe thus much unto rocks of the North must presume or discover the like *magneticals* in the South. For, in the Southern Seas and far beyond the Equator, variations are large, and declinations as constant as in the Northern Ocean. Sir T. Browne, *Vulg. Err.*, II, 3.

magnetically (mag-net'i-kal-i), *adv.* In a magnetic manner, by magnetism.
magneticalness (mag-net'i-kal-nes), *n* The property of being magnetic. *Hist. Roy. Soc.*, IV, 253.

magnetician (mag-ne-tish'an), *n* [*< magnetic + -ian*] One skilled in magnetism, a magnetist.
magnetism (mag-net'ik-nes), *n* The quality of being magnetic; magneticity.

magnetics (mag-net'iks), *n*. [Pl. of *magnetic* see *-ics*] The science or principles of magnetism.

magnetine (mag'ne-tin), *n*. [*< magnet + -ine*] 1. The principle of magnetism, a hypothetical imponderable matter in which magnetic phenomena are supposed to occur. Compare *luminine*.

It is upon their operation, but more particularly on the influence of *magnetine*, that the vital functions in all their modifications are dependent.
Ashburner, in Reichenbach's *Dynamics* (trans. 1851), p. xiv.

2. A compound of some kind of cementing material and a magnetic powder, such as iron filings or magnetic oxide of iron, used in some forms of magnetic belts, etc.

magnetipolar (mag'net-i-pō'lär), *a* [*< L. magnes (magnet-) + polar*] Possessing magnetic polarity; as, platinum is sometimes *magnetipolar*.

magnetisability, **magnetisable**, etc. See *magnetizability*, etc.

magnetism (mag'ne-tizm), *n*. [= F. *magnétisme* = Sp. *Pg. That peculiar property occasionally possessed by certain bodies (more especially by iron and steel) whereby, under certain circumstances, they naturally attract or repel one another according to determinate laws.

According to the molecular theory of magnetism, the molecules of a magnetic substance possess permanent polarity, and as it is more and more highly magnetized the poles are arranged more and more perfectly in a common direction, when it is magnetized to the highest degree possible—that is, to saturation—all the north poles of the molecules point in one direction and all the south poles in the opposite direction. On this theory coercive force is simply that condition of the substance which retards this molecular arrangement during the process of magnetization and tends to retain it after magnetization. The current theory, or Ampère's theory of magnetism, supposes each molecule to be traversed by a closed electric circuit, these currents become parallel upon magnetization, and may then be regarded as equivalent to a series of closed electric currents about the exterior of the bar, these currents being clockwise at the south pole and counter clockwise at the north pole. This theory derives its support from the observed fact that a spiral conductor traversed by a current (a solenoid) behaves as a magnet in all respects, being directed similarly by the earth and having a similar field of force about it. See *magnet*.

In many treatises it is the fashion to speak of a magnetic fluid or fluids, it is however, absolutely certain that *magnetism* is not a fluid. A fluid cannot possibly propagate itself indefinitely without loss.
S. P. Thompson, *Elect. and Mag.*, p. 81.

2. That branch of science which treats of the properties of the magnet, and of magnetic phenomena in general. — 3. Attractive power; capacity for exciting sympathetic interest or attention as, the *magnetism* of eloquence; personal *magnetism*.

I do not think he [Dryden] added a single word to the language, unless, as I suspect, he first used *magnetism* in its present sense of moral attraction.

mesm. — **Blue magnetism**, that of the south pole of a magnet. — **Diffusion of magnetism**. See *diffusion*. — **Induced magnetism**. See *induced*. — **Lamellar magnetism**, magnetism distributed over a surface, as of a magnetic shell, in distinction from magnetism concentrated at a point, as at a pole. — **Red magnetism**, that of the north pole of a magnet. — **Residual magnetism**, the magnetism remaining in a mass of iron after the magnetizing influences have been removed. Its amount increases with the coercive force and the thinness of the bars, and in perfectly pure soft iron is practically zero for bars of moderate thickness in comparison with their length. — **Retentive magnetism**, permanent magnetism as of an iron ship. — **Terrestrial magnetism**, the magnetic properties possessed by the earth as a whole, which give the needle its directive power and cause it to dip and which also communicate magnetism by induction, as to a bar of iron placed parallel to the dipping needle. See *declination*, *dip*, also *achne*, *modinal*, *woyonsi*.

magnetist (mag'ne-tist), *n*. [*< magnet + -ist*] One who is versed in the science of magnetism; a *magnetician*.

magnetite (mag'ne-tit), *n*. [*< magnet + -ite*] Magnetic oxide of iron, a black oxide of iron (Fe_3O_4 or $\text{FeO} \cdot \text{Fe}_2\text{O}_3$) which is strongly attracted by a magnet. It sometimes possesses polarity, and is then called *lodestone*. It occurs in isometric crystals, generally octahedrons or dodecahedrons, and also more commonly massive in beds in the older crystalline rocks. In the form of scattered grains or crystals it is a common constituent of many igneous rocks. It is an important ore of iron, and occurs in large quantities in Norway and Sweden, in the Adirondack and West Point regions of New York, and in New Jersey. Titaniferous magnetite is a variety containing some titanium.

magnetitic (mag-ne-tit'ik), *a*. [*< magnetite + -ic*] Pertaining to magnetite, of the nature of magnetite, containing magnetite, as, *magnetitic* slates.

magnetizability (mag-ne-ti-zā-bil'i-ti), *n*. [*< magnetizable + -bility*] The power or susceptibility of being magnetized, the coefficient of magnetic induction. To increase the magnetizability is to increase the coefficient of magnetic induction, to load with magnetizability is to load with magnetic induction. Also spelled *magnetisability*.

magnetizable (mag'ne-ti-zā-bl), *a* [*< magnetize + -able*] Capable of being magnetized. Also spelled *magnetisable*.

magnetization (mag'ne-ti-zā'shon), *n*. [*< magnetize + -ation*] The act of magnetizing, or the state of being magnetized. Also spelled *magnetisation*. — **Magnetization of light**, a phrase used by Faraday to express the mutual relation which he provided to exist between magnetism and light. He applied it especially to the phenomenon of the rotation of the plane of polarization of a light ray passed through a transparent medium in a powerful magnetic field.

To communicate magnetic properties to, as, to *magnetize* a needle. — 2. To attract as if by a magnet, move; influence. — 3. To put under the influence of animal magnetism, mesmerize, hypnotize.

II. *intrans* To acquire magnetic properties; become magnetic, as, a bar of iron standing some time in an inclined position will *magnetize*.

Also spelled *magnetise*.
magnetizee (mag'ne-ti-zē), *n*. [*< magnetize + -ee*] One who is magnetized or mesmerized. Also spelled *magnetized*.

magnetizer (mag'ne-ti-zēr), *n*. 1. That which communicates magnetism. — 2. One who magnetizes or mesmerizes.

Also spelled *magnetiser*.
magneto (mag'ne-tō), *n*. [Short for *magneto-electrical machine*] A magneto-electric machine, as, a *magneto-motor*. S. P. Thompson, *Dynamo-Elect. Mach.*, p. 368.

magneto- A combining form of *magnet* or *magnetic*, often implying especially *magneto-electric*. As applied to electric machines, it is used (in contradistinction to *dynamo*) to indicate that the magnetic fields involved are due to permanent magnets.

magneto-bell (mag'ne-tō-bel), *n*. An electric bell in which the armature of the electromagnet is polarized—that is, is a permanent magnet. The armature is alternately attracted and repelled when the alternate current from a magneto-electric machine is passed through the coil of the electromagnet, and a hammer attached to a continuation of the armature placed between two bells rings them. It is used as a telephone call bell. Also called *magneto call bell*.

magnetod (mag'ne-tōd), *n*. [*< magnet + -od*] Magnetism, magnetic od, the hypothetical odic force or principle of magnetism. Reichenbach.
magneto-electric (mag'ne-tō-ē-lek'trik), *a*. Pertaining to magneto-electricity. magnetometer (mag-ne-tom'e-tēr), *n*. [*Gr μαγνης* (mag'net-), a magnet, + *μέτρον*, a measure] An instrument used to measure magnetic force or the strength of a magnetic field, especially one used to measure the intensity of the earth's magnetic force at any place. Magnetometers are arranged to measure the horizontal and vertical components of this force, from which its total intensity and direction are calculated — *Bifilar magnetometer* See *bifilar*

magnetometric (mag'ne-tō-met'rik), *a*. [*mag-netometr* (see) + *-ic*] Pertaining to or employed in the measurement of magnetic forces, obtained by means of a magnetometer. as, *magnetometric observations*

magnetometry (mag-ne-tom'e-trī), *n*. [*Gr μαγνης*, a magnet, + *μετρία*, *metrīā*, a measure.] The measurement of the strength of a magnet, or, more strictly, of a magnetic field, especially, the measurement of the earth's magnetic force; the use of a magnetometer

magnetomotive (mag'ne-tō-mō'tiv), *a*. Producing active magnetic effects — *Magnetomotive force*, the magnetizing force or influence to which a magnetic substance is subjected in a magnetic field, the quantity which divided by the magnetic resistance gives the intensity of magnetization. Analogous to *electromotive force*

magneto-optic (mag'ne-tō-op'tik), *a*. Pertaining to magneto-optics

magneto-optics (mag'ne-tō-op'tiks), *n*. That branch of physics which considers the modifying action of a magnet upon light. Its most important effect is the rotation of the plane of polarization of a light-ray on passing through a transparent body in a powerful magnetic field. Since electromagnets are employed in these experiments, this subject is mainly included under the more general head of *electro-optics*

magnetophone (mag-net'ō-fōn), *n*. [*Gr μαγνης* (mag'net-), a magnet, + *φωνή*, sound, voice] An apparatus devised by H S Carhart, consisting essentially of a horseshoe magnet, in front of which is a disk of sheet-iron pierced with a number of holes, and on the other side a small induction-coil in circuit with a telephone. Upon rotating the disk a clear musical note is heard in the telephone, the pitch rising as the rapidity of rotation is increased. This is explained by the intermittent action of the magnet upon the core of the coil, caused by the presence of the rotating perforated disk

magneto-pointer (mag'ne-tō-poin'tōr), *n*. The index of a magneto-electric dial-telegraph

magneto-printer (mag'ne-tō-prin'ter), *n*. A printing telegraph in which a magneto-electric machine is the working-power. More fully called *magneto-printing telegraph* T D Lockwood, *Elect*, Mag, and Teleg, p. 62

magnetoscope (mag-net'ō-skōp), *n*. [*Gr μαγνης* (mag'net-), a magnet, + *σκοπεῖν*, view.] 1 A person supposed to see, or a thing supposed to aid in seeing, by means of magnetism; a clairvoyant, or a clairvoyant's device — 2. In physics, a contrivance for indicating the presence of magnetic force, but without measuring its intensity

magneto-telegraph (mag'ne-tō-tel'ē-gráf), *n*. Same as *magneto-electric telegraph* (which see, under *magneto-electric*).

magneto-telephone (mag'ne-tō-tel'ē-fōn), *n*. A telephone in which variations in the strength of a magnet produce, or are produced by, undulatory currents in a coil of wire surrounding either the whole or a part of the magnet and forming part of the telephone circuit. See *telephone*

magneto-transmitter (mag'ne-tō-trāns-mit'er), *n*. 1 In telephony, a magneto-telephone used to transmit speech or other sounds. — 2. In telegraph, a magneto-electric machine used to produce the telegraphic currents

magnifiable (mag'ni-fi-ā-bl), *a*. [*mag-nify* + *-able*] 1. Capable of being magnified or enlarged. — 2. Worthy to be magnified or extolled

Number, though wonderful in itself, and sufficiently magnifiable from its demonstrable affection, hath yet received adjectives from the multiplying conceits of men. *Sir T Browne*, *Vulg Err*, iv 12

1 The song or hymn of the Virgin Mary in Luke i 46-55, beginning "My soul doth magnify the Lord" It is very similar to the song of Hannah (1 Sam i 1-10), which has accordingly been called the *Old Testament Magnificat*. The *Magnificat* was in use in the hours or daily service of the Christian church as early as about A D 500. In the Greek Church it is the ninth ode (antic) at Orthros (Lauds), and is called the *Ode of the Theotokos*. It was at first omitted from the American Prayer book but was restored in 1886

The least error in a small quantity, as in a small circle, will, in a great one, as in the circles of the heavenly orbs, be proportionally magnified.

N. Grew, Cosmologia Sacra, II. 5

Speak, o'er my Fancy magnify my Fears
Congress, To Cynthia.

2 To cause to appear greater; increase the apparent dimensions of, enlarge or augment to the eye. as, a convex lens *magnifies* the bulk of a body to the eye.

Since the shorter the focus of the lens the more closely may the object be approximated to the eye, the retinal picture is enlarged, causing the object to appear *magnified* in the same proportion. *Encyc. Brit., XIV 259.*

3 To exalt the power, glory, or greatness of, sound the praises of, extol; glorify

O, magnify the Lord with me, and let us exalt his name together *Ps. xxiv. 3.*

Those highly *magnify* him whose judicious inquiry into his acts, and deliberate research into his creatures, return the duty of a devout and learned admiration

Sir T. Browne, Religio Medici, I. 13.

4. To represent as greater than the reality, exaggerate as, to *magnify* a person's deeds, to *magnify* the evils of one's lot

My wife . . . used every art to *magnify* the merit of her daughter *Goldsmith, Vicar, xvi*

Magnifying power of a microscope, the ratio of the length upon the retina of any part of the image of the object looked at with the microscope to the length of the retinal image of the same object looked at without the microscope at a standard distance of 10 inches. In regard to the magnifying power of eye glasses, complicated considerations have to be introduced. — **Magnifying power** of a telescope, the ratio in which the angle subtended by any linear dimensions of the object looked at is increased by the telescope. It is always equal to the focal length of the object-glass divided by that of the eyepiece. For a distant object the focal length of the object-glass is that for parallel rays — that is, its principal focal length, for nearer objects the focal length is greater, and the magnifying power is correspondingly increased.

With plain heroic *magnitude* of mind.

Milton, S. A., I. 1279

We commonly find in the ambitious man a superiority of parts, in some measure proportioned to the superiority of his designs.

Horsley, Works, I. iv

2. Largeness of relation or significance; importance, consequence as, in affairs of *magnitude* disdain not to take counsel — 3 Size, or the property of having size; the extended quantity of a line, surface, or solid, length, area, or volume.

And fast by, hanging in a golden chain,
This pendant world, in bigness as a star
Of smallest *magnitude*. *Milton, P. L., II 1053*

One may learn how the feeling of *magnitude* varies with changes in the absolute *magnitude* of the object, and so reach a more precise and scientific statement of this particular aspect of the coexistence between body and mind

J. Sully, Sensation and Intuition, p. 44

4. Any kind of continuous quantity which is comparable with extended quantity. In this sense we speak of the magnitude of a velocity, force, acceleration, or other vector quantity, but we do not properly speak of a magnitude of heat, energy, temperature, sound, etc. The use of the word as a synonym of *quantity*, as in the following passage, is to be deprecated

By intensive *magnitude* is meant the strength of a sensation, by extensive *magnitude*, its volume, which roughly speaking corresponds to the area of the sentient surface and the number of nervous elements acted upon

J. Sully, Sensation and Intuition, p. 44

5. In *astron*, the brightness of a star expressed according to the numerical system used by astronomers for that purpose. In this sense *magnitude* translates Greek *μεγεθος*, used in the same sense in the Almanac, the expression being due to the fact that bright stars, by an effect of irradiation, look larger than faint ones. The brightest stars are said to be of the first magnitude, while those of the sixth magnitude are hardly noticed by casual observers in ordinary states of the sky. Since the brightness of stars has been measured photometrically, the interval between successive magnitudes has been defined by a constant ratio of brightness, which in the so called absolute scale, now generally used, is $\sqrt[5]{100}$, or 2.51

6. In *anc. pros.*, the length of a syllable, foot, colon, or meter, expressed in terms of the metrical unit (primary time, semeion, or mora) as, a foot of *isometric magnitude*, a colon of *isometric magnitude* — **Absolute magnitude** See *absolute* — **Angular magnitude**, the quantity of an angle — **Apparent magnitude of an object**, that magnitude which is measured by the optic or visual angle intercepted between lines drawn from the extreme points of the object to the center of the pupil of the eye. This angle may be considered to be inversely as the distance of the object. [This phrase is used chiefly with reference to the heavenly bodies, but is employed also in many branches of optical science, with the same general meaning.] — **Center of magnitude** See *center* — **Syn. Bulk, Volume, etc** See *size*

Magnolia (mag-nō'H-ē), *n* [NL (Plumier, 1703), named after Pierre Magnol, a French botanist (1648-1715)] 1 A genus of plants, type of the natural order *Magnoliaceae* and the tribe *Magnolieae*, characterized by a sessile cone-shaped cluster of pistils, and two-ovuled persistent carpels which open down the back at maturity. They are trees or shrubs with entire alternate leaves, often evergreen, conduplicate in the bud, and then protected by membranous stipules, and large showy flowers which are solitary or terminal. The calyx consists of three deciduous sepals and the corolla of six to twelve petals, usually white or purplish, and the stamens and pistils are numerous. The flowers are generally fragrant, and the fruit is a spike, consisting of a number of follicles, from the opening of which the scarlet or brown seeds are suspended at maturity by long and slender threads. There are about 15

species, indigenous to subtropical Asia and the eastern part of North America. They are almost all very ornamental and are frequently cultivated. *M. conspicua* is the yulan. *M. grandiflora* is the big laurel or bull bay of the southern United States, a fine forest-tree, 60 or 80 feet high, evergreen, with fragrant flowers. *M. macrophylla* is the great-leaved cucumber, a less common tree of the same region. *M. Umbellata* is the umbrella-tree. *M. acuminata*, the cucumber tree or mountain magnolia, extends north to New York and Ohio. Another cucumber tree is *M. cordata*, growing in the Southern States. *M. glauca*, a moderate sized tree, or northward a shrub, grows in swamps from Massachusetts to Florida and Texas. It has globular fragrant flowers, 2 inches long, the leaves ever

green in the south. It is variously named *small* or *laurel magnolia*, *sweet bay* or *white bay*, *white laurel* or *swamp-laurel*, also *beaver tree* and *swamp aspen*. The genus appears very early and very abundantly in the fossil state, over 50 species having been described. They range from the Middle Cretaceous to the Pliocene, being more numerous in the Cretaceous than in the Tertiary in both Europe and America, and also occurring in Greenland, in Australia, in Japan, and in Java.

Magnoliaceae (mag-nō-lī-ā'sē-ē), *n* pl. [NL (A. P. de Candolle, 1818), *< Magnolia* + *-aceae*.] A natural order of dicotyledonous polypetalous trees or shrubs, belonging to the cohort *Ranales*, based on the genus *Magnolia*. It is characterized by having the sepals and petals in from two to an indefinite number of rows or series, petals and stamens usually very numerous, the receptacle bearing extrorse carpels, and the seeds with a minute embryo and no albumen. The order embraces 4 tribes, 19 genera, and about 85 species, growing in tropical Asia and North America (a few in tropical and South America), in Australia, and in New Zealand.

magnoliaceous (mag-nō-lī-ā'shūs), *a* [*< magnolia* + *-aceous*.] Of or pertaining to plants of the natural order *Magnoliaceae*, resembling the magnolia.

Magnoliaceae (mag-nō-lī-ā'sē-ē), *n* pl. [NL (A. P. de Candolle, 1824), *< Magnolia* + *-ae*.] A tribe of trees and shrubs of the natural order *Magnoliaceae*, characterized by perfect flowers, imbricate carpels growing in heads or spikes and arranged in an indefinite number of series, and stipules which are folded about the leaves in veneration.

magpie (mag'pi), n. [C mag¹ + pie², or abbr of magot-pie (Cf. mag¹, madget, etc)] 1. A well-known bird of Europe, Asia, and America, of the genus *Pica* and family *Corvidae*, the *Pica pica*, *P. rustica*, *P. caudata*, or *P. hudsonica*. This pie is lustrous black, with green, purple, violet, and golden iridescence, the under parts from breast to crissum the scapulars, and a great part of the inner webs of the primaries are white. The bill and feet are black. The bird is from 15 to 20 inches long, according to the development of the tail, which is 12 inches or less in length, extremely graduated, the stretch of wings is about 2 feet. Magpies are omnivorous, like most corvine and garruline birds, and noted for their craftiness, kleptomania, and mimicry. They nest in trees and shrubs, building a very

Magpie (*Pica caudata*)

bulky structure, and lay from 6 to 9 pale drab eggs, dotted, dashed, and blotched with brown. As a book name, *magpie* is extended to all the species of *Pica* and some few related pies or jays with long tails. The yellow-billed magpie of California is *P. nuttalli*. Blue magpies are certain long-tailed jays of the genus *Cyanopicus*, as *C. cyanus* of eastern Asia and Japan, or *C. cooki* of Spain; also of the genus *Urocissa*, as *U. erythrorhynchos*, the red-billed blue magpie of the Orient. The bird called French magpie is the red-backed shrike, *Lanius collurio*. The name *magpie*, or *magpie pigeon*, is given to a strain of domestic pigeons bred to colors resembling those of the magpie. *Magpie* is often used adjectively with reference to some characteristic of the bird.

2. The magpie-shrike.

Below us in the Valley a mob of Jackasses were shouting and laughing uproariously, and a magpie was chanting his noble vesper hymn from a lofty tree. *H. Kingsley*, Geoffrey Hamlyn, p. 167

3. A halfpenny. [Slang, Eng.]

I'm at low water mark myself—only one bob and a magpie, but as far as it goes I'll fork out and stump. *Dickens*, Oliver Twist, viii

4. A bishop: so called from the black and white of his robes. [Old slang, Eng.]

Let not those silk worms and magpies have dominion over us. *Tom Brown*, Works, I 101 (*Darley*.)

5. Among British marksmen, a shot striking that division of the target which is next to the outermost when the target is divided into four sections so called because the markers indicate this hit by means of a black and white disk.

magpie-diver (mag'pi-di'vēr), n. The smew or white nun, *Mergellus albellus*. [Prov. Eng and Irish]

magpie-finch (mag'pi-finch), n. Any one of the smaller spotted or otherwise varied birds of the genus *Spermeestes*.

magpie-maki (mag'pi-mā'ki), n. The ruffed lemur, *Lemur macaco*, having black and white spots.

magpie-moth (mag'pi-mōth), n. A moth of the genus *Abraxas*, *A. grossulariata*. Its color is white with black and orange spots, and the same colors appear on it in its larval and pupal states. The larva feeds on currant- and gooseberry leaves, and where abundant is very destructive. See *Abraxas*, 3. Also called *gooseberry moth*.

magpie-robin (mag'pi-ob'in), n. A dayal, any bird of the genus *Copchichus*, as *C. saularis* of India. See cut under *Copchichus*.

magpie-shrike (mag'pi-shrik), n. 1. A South American tanagers bird, *Lanius piceatus* of Latham, now known as *Isopis leverianus*, about 10 inches long, glossy black and white in color, with a long graduated tail, thus resembling a magpie. It inhabits Guiana, Venezuela, Colombia, Ecuador, Peru, and Bolivia, and in some parts of Brazil is replaced by an allied larger species or variety, *C. major*, 1½ inches long. 2. The pied piping-shrike of Australia, somewhat resembling the English magpie, having a rich bell-like warble. This bird is apparently *Oreocera cristata* (commonly called *magpie* by the English residents).

magret, magreet, prap Middle English forms of *magpie*.

magman (mag'man), n; pl *magmen* (-men) [C mag¹ (as if poss mag's) + man] A street swindler who preys on countrymen and simple persons. [Slang, Eng.]

maguari (ma-gwā'ri), n. [S Amer.] A South American stork, *Eureunura maguari*. It resembles the European stork in size and plumage, but has a black bill and a peculiar formation of the tail, which is forked and black, with long white undercoverts. It is found on plains as well as in swamps, feeds on small mammals, reptiles, insect, and birds eggs, and is sometimes tamed.

maguey (ma-gwā'), n. [Mex *maguay*] The American aloe, *Agave americana*—*Gum maguey*. See *gum*.

Magus (mā'gus), n, pl *Magi* (mā'ji) [L, < Gr μάγος see *mage*] 1. One of the members of the learned and priestly caste in ancient Persia, who had official charge of the sacred rites, practised interpretation of dreams, professed supernatural arts, and were distinguished by peculiarities of dress and insignia. Their origin may be traced to the Accadians, a Turanian race, the earliest settlers of the lower Euphrates valley. The first historical reference to the Magi occurs in Jer xxxix 3, 13, where a Babylonian rab mag, or chief of the Magi, is mentioned in connection with the siege, capture, and rule of Jerusalem.

2. In Christian history, one of the "wise men" who, according to the Gospel of Matthew (ii 1, 2), came from the East to Jerusalem to do homage to the new-born King of the Jews. A tradition as old as the second century (resting on Ps lxxii 10, Isa xlix 7) makes them kings, and at a later period the names Melchior, Kaspar, and Balthasar become attached to them. As the first of the pagans to whom the birth of the Messiah was announced, they are honored at the feast of Epiphany. In the calendar, however, the three days immediately following the first of the new year are called after them. In works of art the youngest of them is represented as a Moor.

Magyar (mo'dyor), n. [Hung, > Turk *mayār*.]

1. A member of a race, of the Finno-Ugric stock, which invaded Hungary about the end of the ninth century, and settled there, where it still forms the predominant element of the population.—2. The native tongue of Hungary. It belongs to the Ugric branch of the Ural-Altaic or Scythian tongues.

magydare (maj'i-dār), n. [C L. *magydaris*, *magudaris*, *maguderis*, < Gr μαγδαρε, the seed or stalk of the laserpitium, also another plant.] Laserwort, a plant of the genus *Laserpitium*.

Mahabharata (ma-hā-bhā'rā-tā), n. [Skt, < mahā-, great, + Bhārata, a descendant of a king or a tribe named Bharata, < √ bhar = Gr φέρω = E dber¹.] The name of one of the two great epic poems of ancient India, the other being the Ramayana. It contains a history of the contest for supremacy between the two great royal families of northern India, the Pandavas and the Kurus or

Kauravas, ending in the victory of the former and the establishment of their rule. In reality, this narrative occupies but a fourth of the poem, the other three fourths being episodic and added at various times. The Mahabharata thus became a sort of encyclopaedia, embracing everything that concerned a cultivated Hindu to know. **Mahadeva** (ma-hā-dā'vā), n. [Skt. *mahādēva*, < mahā-, great, + deva, god: see *deity*.] A name of Siva, the third deity of the great Hindu triad. **mahalah** (mā'ha-lah), n. A Hebrew word of disputed meaning, occurring in the titles of Psalms lvi. and lxxxviii. (in the last of which the qualification *leanmoth* is added): according to Gesenius, a lyre or cithara, according to others, antiphonal singing or a direction to sing in an antiphonal manner.

mahaleb (mā'ha-leb), n. [Ar. *mahleb*] A species of cherry (*Prunus Mahaleb*) whose fruit affords a violet dye and a fermented liquor resembling kirschwasser. It is found in the middle and south of Europe. Its flowers and leaves are used by perfumers, and its wood by cabinet-makers. Tubes for tobacco pipes, called *cherry-sticks* or *stems*, are made of its young stems, sometimes several feet long and perfectly straight. See *cherry*, 1.

mahaly, n. [Amer. Ind.] A female salmon. [California.]

Maharaja, Maharajah (ma-hā-rā'jā), n. [Skt. *maharāja*, < mahā-, great, + rāja, a prince or king see *rajah*.] The title borne by some Indian princes whose sovereignty is extensive.

Mahatma (ma-hat'mā), n. [Skt. *mahātman*, great-souled magnanimous.] An adept in Brahmanism a name recently applied by "theosophists" to certain imaginary beings, of preternatural powers, asserted to exist in or near India. No beings so named and endowed have any ancient recognition in Indian literature.

Mahdi (ma'dē), n. [Also sometimes *Mehdee* (< Turk *mehdī*); < Ar *mahdī*, a guide, leader, esp a spiritual director, lit. 'the guided or directed one,' < ma-, a formative prefix, + hādī, guide (> hēdā, a guide in religion, spiritual director, *hādāya*, guidance).] According to Mohammedan belief, a spiritual and temporal ruler destined to appear on earth during the last days. Some sects hold that the Mahdi has appeared, and in concealment awaits the time of his manifestation. There have been a number of pretended Mahdis, of whom the latest of importance was the chief whose armed followers resisted the advance of the British troops into the Sudan in 1884-85, and overthrew the Egyptian power in that region, which they continued to hold. The belief apparently grew out of the Jewish belief in the coming of the Messiah.

It is from the descendants of 'Alee that the more devout Moslems expect the *Mehdee*, who is to reappear on earth in company with the Prophet Elias, on the second coming of Christ. *J P Brown*, The Dervishes, p. 74.

Mahdi, or 'the well-guided,' is the name given by the Shi'ites to that member of the family of Ali who, according to their belief, is one day to gain possession of the whole world, and set up the reign of righteousness in it. *Encyc Brit*, XVI 570.

Mahdian (mā'di-an), n. [C *Mahdi* + -ian] One who holds that the Mahdi whose coming was foretold by Mohammed has already appeared; specifically, one who holds that the Mahdi has already appeared in the person of Mohammed Abu el-Qasim, the twelfth Imam, who is supposed to be concealed in some secret place awaiting the hour of his manifestation. The Shi'ahs in general hold this view. Also *Mahdist*.

Mahdism (mā'di-izm), n. [C *Mahdi* + -ism.] The doctrine of, or belief in, the coming of the Mahdi. *Fortnightly Rev*, XLIII 701.

Mahdism (mā'di-izm), n. [C *Mahdi* + -ism] Same as *Mahdism*. *The Academy*, Oct. 20, 1888, p. 249.

Mahdist (mā'dist), n. [C *Mahdi* + -ist] 1. Same as *Mahdian*.—2. A follower of the pretended Mahdi of the Sudan in Africa. See *Mahdi*.

Another body of *Mahdists* coming round on our right reinforced them. *Daily Telegraph* (London), March 21, 1885.

Mahernia (mā-hēr-ni-ā), n. [NL. (Linnaeus, 1767), an anagram of *Hermannia*, a closely allied genus.] A genus of dicotyledonous poly-petalous plants of the natural order *Sterculiaceae* and the tribe *Hermanniaceae*, characterized by the indefinite number of ovules and the reniform seeds with a curved embryo, and differing from *Hermannia* in having the filaments dilated at the middle. It includes 33 species of undershrubs or perennial herbs of southern Africa, many of which are cultivated in conservatories.

maheymt, n. An obsolete form of *mayhem*. *Chaucer*.

mahlstick (māl'stik), n. [Also *maulstick*, *malstick*, < G. *mahlstock*, *malstock*, < *malen*, paint, + *stock*, stick, staff.] A staff, from three to four feet long, used by painters as a rest for the right hand, and held in the left. It tapers toward the upper end, which is surmounted by a ball of cotton-wool

covered with soft leather, to protect the picture from injury in case of contact.

mahmoodis, mahmoudis, mahmudis (mā-mō'dis), *n. pl.* Same as *mammoudis*.

mahoe (mā'hō), *n.* [Also *mahaut*, a native name.] 1. A malvaceous tree or shrub, *Hibiscus* (*Paritum*) *tiliaceus*, common on tropical coasts. The inner bark has been much used for cordage. — 2. *Sterculia Caribaea*, a tall West Indian tree. — 3. *Melicytus ramiflorus*, a small New Zealand tree of the violet family, with small flowers in bundles on the branches. — **Blue, gray, or mountain mahoe**, *Hibiscus* (*Paritum*) *clatus*, a West Indian tree yielding the Cuba bast. — **Congo mahoe**, *Hibiscus clypeatus*. — **Seaside mahoe**, *Theopelta populnea*, also one of the *Melaceae*, whose bast has been used in British Guiana for making coffee-sacks.

mahoganize (ma-hog'a-niz), *v. t.*; pret. and pp. *mahoganized*, ppr. *mahoganizing* [*< mahogana(y) + -ize*]. To cause to resemble mahogany, as by staining.

mahogany (ma-hog'a-ni), *n.* [= *F. mahagoni*, *mahogon* = *Pg. mogono*, *mogno*, *magno* = *It. mogano* = *D. mahone* = *G. mahagoni* = *Sw. mahagony*, *mahogny*, *mahogun* = *Dan. mahogni* = *Turk. maghun* (NL *mahogony*), *< W. Ind. or S. Amer. mahogony*. Cf. *acayou*!] 1. A tree,

Flowering Branch of Mahogany (*Swietenia Mahagoni*)
a the flower, b the fruit

Swietenia Mahagoni, of the natural order *Melaceae*. It is native in the West Indies, Central America, Mexico, and the Florida keys. Its importance lies in its timber.

2. The wood of the above tree. It combines a rich reddish brown color, beauty of grain, and susceptibility of polish with unusual soundness, uniformity freedom from warping, durability, and largeness of dimensions. On account of its costliness, its use is restricted mainly to furniture making, cabinet-work, etc., often in the form of a veneer. The quality of the timber varies with the conditions of its growth, exposed situations and solid ground yielding the finest. Mahogany with figured grain is especially prized, and is obtained largely, but not exclusively, from the San Domingo and Cuba wood, called *Spanish mahogany*. The Honduras mahogany, or bay wood, shipped from the Bay of Campeche is more open grained and plain, and of larger dimensions, yielding logs sometimes 40 feet in length. The Mexican mahogany has the largest growth of all, is similar to the last-named, and supplements its diminishing supply. Hence—3. A table, especially a dinner-table.

I had hoped to have seen you three gentlemen with your legs under the mahogany in my humble parlor in the Marks.
Dickens, *Master Humphrey's Clock*

4t. A kind of drink. See the quotation.

Mr. Elliot mentioned a curious liquor peculiar to his country, which the Cornish fishermen drink. They call it mahogany, and it is made of two parts gin and one part treacle, well beaten together.

Bonnett, *Johnson* (ed. 1886), VIII 53

African mahogany. Same as *Senegal mahogany*. — **Australian mahogany**, *Eucalyptus marginata* (see *jarrah*), also, other eucalypts (as below) and species of the related genus *Angophora*. — **Bastard mahogany**, in Jamaica, *Matayba* (*Ratonia*) *apetala*, in Australia, *Eucalyptus marginata*, the jarrah and *E. botryoides*. — **Ceylon mahogany**. Same as *jack wood*. — **Forest mahogany**, in New South Wales and Queensland, *Eucalyptus resinifera*. — **Horse-flesh mahogany**. Same as *sabiu*. — **Indian or East Indian mahogany**, *Cedrela Toona*, the tonon tree, also, *Soyimada febrifuga*, the Indian redwood, and *Chakrasia tabularis*, the Chittagong-wood—both formerly classed under *Swietenia*. — **Kentucky mahogany**, a rare name of the Kentucky coffee tree. See *Gymnocladus*. — **Madeira mahogany**. Same as *canary-wood*. — **Mountain mahogany**, a tree of the genus *Cercocarpus*, especially *C. ledifolia* and *C. parvifolia*, sometimes also same as *mahogany-birch*. — **Red mahogany**. Same as *forest mahogany*. — **Senegal mahogany**. See *Khaya*. — **Swamp mahogany**, in New South Wales, *Eucalyptus botryoides* and *E. robusta*. — **White mahogany**, in Jamaica, *Antiarthra bifurcata*, in Australia, *Eucalyptus pilularis*, var. *cementicoides*, and *E. robusta*.

mahovo (ma-hō'vō), *n.* [Etym. not ascertained.] A name given by Von Schuberky to his application of the fly-wheel to the locomotive. The fly wheel in this invention is ponderous and in running down grades it stores up surplus mechanical power generated by the descent of the locomotive and train, to be in turn imparted to the driving wheels in ascending a grade, thus aiding the engine in making its ascent. The invention has not met with success.

Mahratta (ma-rat'a), *n.* One of a race of Hindus inhabiting western and central India, who in the seventeenth and eighteenth centuries conquered and ruled many states, of which they formed a confederation, but which are now largely under British rule. They are Brahmans in religion, but differ physically from other Hindus, and have a distinct Hindu dialect, the Mahratti (Marathi).

mahsir, mahsur (ma'ser), *n.* [*E. Ind.*] A cyprinoid fish, *Babus* *son*, occurring generally in the fresh waters of India, but of the largest size and most abundant in mountain and rocky streams. It resembles the European barbel in generic characters, but has much larger scales (25 to 27 along the lateral line) thick lips often enlarged about the middle, and the maxillary barbels longer than the rostral and extending to below the last third of the eye. It is the great fresh water game fish of India, and reaches a large size, occasionally weighing 100 to 150 pounds. Also called *mahmer*, and by other forms of the word.

Mahu (ma'ho), *n.* [Perhaps a made name, like many other appellations of devils, but cf. *Mahom*, 3.] An appellation in Shakespeare of the devil as the instigator of theft.

Five fiends have been in poor Tom at once. Hobbs

3. A fabric of meshes, especially and almost exclusively of metal, used as a defense against weapons, a kind of armor, specifically called *chain-mail*, composed of rings of metal, interlinked as in a chain, but extended in width as well as in length. Chain mail seems to have been introduced into the Roman

army in imitation of the Gauls, and was much worn under the later empire. It was the favorite armor in Europe during the twelfth and thirteenth centuries, but was slow of fabrication and expensive. It was of three kinds: (1) that in which the rings kept their shape by their stiffness alone and which was therefore very heavy; (2) that in which the links were riveted and forged; (3) that in which each link was braced across by a small bar — a rare form. See *hauberk, chain-mail, banded mail* (under *banded*), *gusset*, and *camail*

He put a silk cote on his backe,
And mail of manye a fold

Old Robin of Portenale (Child's Ballads, III. 38)

Some wore coat armour imitating scale

And next their skins were stubborn shirts of *mail*

Dryden, Pal. and Arc., ill. 27

4. By extension, armor of any sort

It was also formerly called *Turkey corn* or *Turkey wheat*, after F. *blé de Turquie*, its origin, like that of the *Turkey cock* or *turkey*, being at one time erroneously ascribed vaguely to "Turkey" or the East.] 1 A cereal plant, *Zea Mays*, of the grass family; the Indian corn. In America commonly called simply *corn*, in Europe formerly *Turkey corn* or *Turkey wheat*. For description, see *Zea*.

2 The grain produced by the maize, Indian corn. It appears in market either in the ear (i e, on the cob) or shelled (i e, removed from the cob). It is a highly nutritious food, starchy matter predominating in it. As human food it is used in various forms. (See *corn bread*, *hasty pudding*, *Indian meal*, *hominy*, *corn starch*, *amp*) The immature kernels (green corn), boiled, form an excellent vegetable, and in this state maize is largely preserved by canning. Of late years Indian corn has been extensively manufactured into glucose. Maize is said to furnish food to a larger part of the human race than any other grain except rice. It is also much used for fattening cattle and swine, as well as for horses. An enormous amount is consumed in the manufacture of spirits. It is the principal grain distilled in the United States. Maize was found in cultivation over a great part of America on its discovery, and was rapidly diffused throughout the world wherever the climate was suitable to it

3 Of age, having attained to majority. *Godwin*. — **4** In music (*a*) Of intervals, standard or normal, literally "greater," as compared with minor intervals. The term is more often applied to seconds, thirds, sixths, sevenths, and ninths, designating an interval equivalent to the intervals between the key note of a standard or normal scale and its second, third, sixth, seventh and ninth tone respectively. Thus, a *major second* is two semitones long, a *major third* four semitones, a *major sixth* nine semitones, and a *major seventh* eleven semitones. *Major* has also been applied of late to fourths, fifths, and octaves, and is then equivalent to the older term *perfect*. Finally, it is used to distinguish the larger of two intervals that differ by a minute quantity, as, a *major* step or tone (♯), which is a comma greater than a minor tone. Opposed to *minor*, and also often to *diminished* and *augmented*. See *interval*, *b*.

(*b*) Of tones, distant by a major interval from a given tone — as, A is the *major* third of F, etc. (*c*) Of tonalities and scales, standard or normal, characterized by a major third and also by a major sixth and seventh — opposed to *minor*. The *major tonality* or *scale* is the recognized standard of reference for all the modern musical systems. See *key*, *tonality*, and *scale*. (*d*) Of triads and chords, characterized by a major third between the root and the tone next above, and a perfect fifth between the root and the second tone above — opposed to *minor*, *diminished* and *augmented*. The *major triad* is the usual standard of reference in classifying the chords of modern music. See *triad* and *chord*. (*e*) Of cadences, ending in a major triad. (*f*) Of modes in the modern sense, and thus of composition in general, characterized by the use of a major tonality and of major cadences — as, a piece is written throughout in the *major* mode. From an acoustical point of view, major intervals, chords, and scales are simpler and stronger in themselves and admit of better harmonic extension and combination than minor. The educated taste of modern times has tended to exalt the major over the minor, making the former the standard and normal of which the latter is the variation, while the medieval systems, being based upon a different conception of music at various points, tended the other way. The esthetic effect of the major in contrast with the minor is brighter, stronger, and more complete. It has recently been maintained that major and minor phenomena in all their phases, are mutually reciprocal, the major triad, scale, etc., being measured upward in a certain way from a given tone, and the minor triad, scale, etc., being measured downward in the same way from the same tone. According to this view, the major triad of C is called the *over chord* of C, and the minor triad of C is called the *under chord* of C, etc.

5 In *logic*, wider, broader, more extensive, a predicate to more subjects. The *major extreme* or *major term* of a syllogism is that term which enters into the predicate of the conclusion, the *major premise* is that premise which contains the major term. These have always been the usual definitions, but they have been subject to much dispute, owing to the fact that all real distinction between major and minor vanishes in certain cases — *Bob major*. See *bob*, 7. — *Major axis*. Same as *transverse axis* (which see, under *axis*). — *Major function*. See *function*.

II. n. 1 *Milit.* an officer next in rank above a captain and below a lieutenant-colonel, the lowest field-officer. Malabar nut. See *Justicia*

Malabar catmint, nightshade, plum, rose, etc. See *catmint*, etc.

malacatunet, *n* Same as *melocoton*

Malacca bean, cane, etc. See *bean*, etc.

malachite (mal'a-kit), *n* [= F. *malachite* = Sp. *malaguita* so called as resembling in color the petal of a mallow (cf. *mauve*, mallow-color), *< L. maluche* (also *moloche*), *< Gr. malákhē*, a mallow see *mallow* and *ite*²] A basic carbonate of copper having a beautiful green color, hence commonly called the *green carbonate of copper*. It occurs rarely in tufts of slender monoclinic crystals, more frequently massive with mammillary, stactitic, or granular structure, often fibrous and radiated. The finest specimens come from the Siberian mines. It is also common in Cornwall and in South Australia, Arizona, etc. It takes a good polish, and is manufactured into ornamental articles. It is often called *green malachite*, in distinction from *blue malachite*, or *azurite*, which is a related carbonate of copper containing less water, and which often passes by alteration into the green carbonate. See *azurite* — **Emerald malachite** Same as *diopside*

malachite-green (mal'a-kit-grēn), *n* 1. The natural hydrated bicarbonate of copper. Also called *mountain-green* — 2. A fine green color, like that of handsome specimens of malachite

malachra (ma-lak'ra), *n* [NL (Linnaeus, 1753), erroneously for **Malacha*, *< L. malache*, mallow. see *malachite*, *mallow*] A genus of plants belonging to the natural order *Malvaceae*, a mallow family, and the tribe *Urena*. It is characterized by the dense, involucre heads of flowers, with small bracts irregularly scattered through the cluster. These bracts are, however, sometimes wanting. Five or six species are known, natives of the warmer parts of Asia, Africa and America. They are hairy herbs with lobed or angled leaves, and yellow or white flowers in dense axillary or terminal heads, surrounded by an involucre of leafy bracts. West Indian species have been called *wild okra*

malacia (ma-lā'si-ā), *n* [*< Gr. malakōs*, soft] Morbid softness of any tissue usually in composition as, *myomalacia*, *osteomalacia*

malacic (ma-las'ik), *a* [*< malacia* + *-u*] Pertaining to malacia, especially to osteomalacia

malacissant (mal-a-sis'ant), *a* [*< L. malacissans* (t-), ppr. of *malacissare*, *< Gr. malakizein*, make soft, *< malakōs*, soft] Making soft on tender, relaxing

malacissation (mal'a-si-sā'shon), *n*. [*< L. malacissare*, make soft see *malacissant*] The act or process of making soft or supple

Let this bath, together with the emplanting and vintation (as before), be renewed every fifth day this *malacissation*, or suppling of the body, to be continued for one whole month

Paeon, *Hist. Life and Death*

Malaclemmyidae (mal'a-kle-mī'i-dē), *n pl* [NL, *< Malacoclemmys* + *-idae*] A family of tortoises, typified by the genus *Malacoclemmys*. It includes such species as the familiar diamond backed terrapin of the United States, and several related forms from the Old World have been placed in it. Also *Malacoclemmyidae*

Malacoclemmys (mal-a-kle-m'is), *n*. [NL, short for *Malacoclemmys*] The typical genus of

Malacoclemmyidae, including the diamond-backed terrapin of the United States, *M. palustris*. Also *Malacoclemmys*

Malacobdella (mal'a-kob-del'ē), *n*. [NL, *< Gr. malakos*, soft, + *bēdella*, a leech. see *Bdella*] A genus of worms, formerly supposed to be leeches, now considered to be parasitic nemertean type of a family *Malacobdellidae*. *M. grossi* is a parasite found in the gills of various mollusks

Malacobdellidae (mal'a-kob-del'ē-i-dē), *n pl* [NL, *< Malacobdella* + *-idae*] A family of parasitic nemertean worms, typified by the genus *Malacobdella*. They have an external circular and an internal longitudinal dermomyotome layer, nerve trunks free from the muscular system and united together by an anal commissure, a simple intestine of several coils a posterior sucker, no cephalic grooves, no spines on the proboscis, and the sexes distinct

Malacoclemmys (mal'a-kō-kle-m'is), *n* [NL, *< Gr. malakos*, soft, + *clemmys*, a tortoise see *Clemmys*] Same as *Malaclemmys*

malacoderm (mal'a-kō-derm), *n* One of the *Malacodermata* or of the *Malacodermi*

Malacodermata (mal'a-kō-der'ma-tā), *n pl* [NL, neut. pl. of *malacodermatus* see *malacodermatus*] 1. The sea-anemones as an order of zoantharian *Actinozoa*. They are so called from their softness, corallum being absent or represented only by a few spicules which do not form a hard crust. These polyps are usually of large size and individual, rarely being aggregated into a polypodium. The tentacles are numerous, simple, not pinnately fringed, not in groups of eight and often in several series. They sometimes number about 500, developed in multiples of six. Some of these animals as *Hyanthidae*, are free swimming but most of them are sessile, adherent to rocks, etc., by a fleshy base, but able to creep about to some extent. The *Zoonitidae* are aggregated by a common creeping stem or stolon

2. In *entom*, a division of sericorn pentamerous *Coleoptera*, corresponding to Latreille's *Malacodermi* — 3. In *herpet*, the naked reptiles, or amphibians distinguished from *Sclerodermata*. Also *Malacodermia*

malacodermatus (mal'a-kō-der'ma-tus), *a* [*< NL. malacodermatus*, *< Gr. malakos*, soft, + *derma* (dē'rma), skin see *derma*] Soft-skinned, specifically, of or pertaining to the *Malacodermata*

Malacodermi (mal'a-kō-der'mī), *n pl* [NL, *< Gr. malakos*, soft, + *derma*, skin see *derma*] In Latreille's classification, the second section of sericorn pentamerous *Coleoptera*. It is composed of beetles having, for the most part, soft flexible bodies like the glow worm, the head received into the thorax or at least covered by it at the base, and the prothorax not produced in front and usually not pointed behind. The malacodermi were divided by Latreille into five tribes, *Cibicrura*, *Lampyrinae*, *Meloidae*, *Cleridae* and *Pendulae*. Although the term is literally inapplicable to a large number of the beetles so called, it is retained as one division of *Sericozoa*, the other being *Sclerozoa*.

Malacodermidae (mal'a-kō-der'mī-dē), *n pl* [NL, *< Malacodermi* + *-idae*] A family of *Malacodermi*, containing beetles which are really soft-bodied, as the glow-worms. Also called *Lampyrinae* and *Telephorida*. It corresponds to Latreille's second tribe, *Lampyrinae*

malacoid (mal'a-kōid), *a* [*< Gr. malakoidēs*, of a soft nature, *< malakos*, soft, + *idos*, form] Soft in texture, soft-bodied, having a mucilaginous texture applied to parts of plants, particularly the hyphae of certain fungi

malacolite (mal'a-kō-lit), *n* [Prop. **malacholite*, so called from its color (cf. *malachite*), *< Gr. malákhē*, a mallow, + *lithos*, stone] Drop-side, a lime-magnesian variety of pyroxene, of a pale greenish-white color

malacological (mal'a-kō-lōj'i-kul), *a* [*< malacology* + *-ical*] Of or pertaining to malacology, conchological

malacologist (mal-a-kōl'o-jist), *n* [*< malacology* + *-ist*] One who is versed in malacology, a student of mollusks

malacology (mal-a-kōl'ō-jī), *n* [= F. *malacologie*, *< Gr. malakos*, soft (*> malákhē*, soft-bodied animals without external shells or articulated bones cf. *mollusk*), + *logos*, *< logos*, speak see *-ology*] The science of the molluscous or soft-bodied animals, the knowledge of shellfish. It is synonymous with *conchology*, but implies that attention is paid to the soft parts or anatomical structure of the animals, rather than to their shells

malacon (mal'a-kon), *n* [NL, *< Gr. malakos*, soft] In *mineral*, an altered and somewhat hydrated *zircon*, having a hardness inferior to that of the original mineral

Malaconotins (mal'a-kō-nō-tī'nē), *n pl* [NL, *< Malaconotus* + *-ina*] A subfamily of Old World and chiefly African shrikes, of the family *Laniidae*, named from the genus *Malaconotus*. *J. Cabanis*, 1850. Also *Malaconoti*

malacotinae (mal'-a-kō-nō'tin), *a.* Of or pertaining to the *Malacotinae*.

Malacotus (mal'-a-kō-nō'tus), *n.* [NL., < Gr *μαλακός*, soft, + *νότος*, back] A genus of African shrikes, giving name to the subfamily *Malacotininae* so named from the soft plumage of the back. *W. Swainson*, 1827.

Malacopoda (mal'-a-kōp'ō-dā), *n. pl.* [NL., neut. pl. of *malacopus* see *malacopodous*.] A name given by E. R. Lankester to a grade of *tinathopoda* (or *Arthropoda*) containing only the class *Peripatida*, which itself consists of the single genus *Peripatus*, thus contrasted with a grade or series of *Onychopoda*, including all other crustaceans, insects, etc.

malacopodous (mal'-a-kōp'ō-dus), *a.* [< NL *malacopus* (-pod-), < Gr *μαλακός*, soft, + *πούς* (pod-) = *E. foot*] Having soft feet, specifically, of or pertaining to the *Malacopoda*.

Malacopteri (mal'-a-kōp'te-ri), *n. pl.* [NL., pl. of *malacopterus*, soft-finned see *malacopterous*.] In Johannes Müller's classification of fishes, an order of teleost fishes characterized by fin-rays that are soft, jointed, and generally branched, by abdominal ventral fins, and by the persistent communication between the air-bladder and the intestine. It corresponds nearly to the Cuvierian *Malacopterygii*, but is less comprehensive.

malacopterous (mal'-a-kōp'te-rus), *a.* [< NL *malacopterus*, < Gr *μαλακός*, soft, + *πτερόν*, wing (fin)] Having soft fins.

malacopterygian (mal'-a-kōp'te-ri-j'i-an), *a.* and *n.* I. *a.* Soft-finned, pertaining to the *Malacopterygii*, or having their characters. Also *malacopterygious*.

II. *n.* A fish of the order *Malacopterygii*. **Malacopterygii** (mal'-a-kōp'te-ri-j'i-i), *n. pl.* [NL. < Gr *μαλακός*, soft, + *πτερυξ* (pteryx-), *πτέρυξ*, a wing, fin, < *πτερόν*, a wing] A group of teleost fishes, variously limited; the soft-finned or jointed-fin fishes. (a) In Cuvier's system of classification the second division of bony fishes, having soft fin rays, divided into *Abdominales*, *Subbrachiati*, and *Apodes*. (b) In Müller's system, a group of pharyngognathous fishes, having soft fins, and represented by the family *Scomberomus*. (c) In Gill's system, an order of teleost fishes with cranial bones of the telecephalous type, with the anterior vertebrae not specially differentiated from the rest and not connected, no Weberian ossicle, the shoulder girdle connected with the cranium, a meso-osteoid as well as a hypocranial and hypocranial bones developed, the air bladder connected with the intestinal canal by a pneumatic duct, the ventral fins abdominal, and the dorsal, anal and ventral fins spinous. The order includes the clupeids, salmonids, and related fishes. (d) In the earliest systems, as Artedi's, some anacanthopterygian fishes with slender or flexible spines were loosely included, as *Scomberidae*, the wolf fishes, the lophobranchiata, etc. — **Malacopterygii abdominales**, abdominal soft-finned fishes, Cuvier's second order of fishes, having the ventral fins abdominal in position, behind the pectorals and unattached to the shoulder girdle. Also called *Gasteropterygii*. — **Malacopterygii apodes**, apodal soft-finned fishes, Cuvier's fourth order of fishes, having no ventrals. — **Malacopterygii subbrachiati**, Cuvier's third order of fishes, having the ventrals under the pectorals, and the pelvic arch suspended to the shoulder girdle.

In of Malacopterygian

malacopterygious (mal'-a-kōp'te-ri-j'i-us), *a.* Same as *malacopterygian*.

Malacoscolices (mal'-a-kō-skōl'i-sēz), *n. pl.* [NL., for **malacoscolices*, < Gr *μαλακός*, soft (with ref. to mollusks), + *σκόληξ*, a worm] A superordinal division proposed by Huxley in 1877 to be established for the reception of the *Polysa* and *Brachiopoda* together, in order to indicate the relations of the group so constituted with the worms on the one side and with the mollusks on the other.

malacoscolicine (mal'-a-kō-skōl'i-sin), *a.* Pertaining to the *Malacoscolices*, or having their characters.

malacosis (mal'-a-kō'sis), *n.* [NL., < Gr *μαλακός*, soft, + *-osis*] In *pathol.* the morbid softening of tissues.

Malacosteidae (mal'-a-kōs-tē'i-dē), *n. pl.* [NL., < *Malacosteus* + *-idae*] A family of teleost fishes, typified by the genus *Malacosteus*.

malacosteoid (mal'-a-kōs'tē-oid), *a.* [< *Malacosteus* + *-oid*] Resembling the genus *Malacosteus*, or of pertaining to the *Malacosteidae*.

malacosteon (mal'-a-kōs'tē-on), *n.* [NL., < Gr *μαλακός*, soft, + *στόν*, bone] In *pathol.* osteomalacia.

Malacosteus (mal'-a-kōs'tē-us), *n.* [NL., < Gr *μαλακός*, soft, + *στόν*, bone] A genus of fishes of peculiar aspect, distinguished, among other characters, by the slight calcification of the

skeleton, typical of the *Malacosteidae*. There are several species, all deep-sea fishes, of which *M. niger* is the best-known.

malacostomous (mal'-a-kōs'tō-mus), *a.* [< Gr *μαλακός*, soft, + *στόμα*, mouth] Leather-mouthed; having a soft mouth—that is, toothless jaws: said of fishes.

Malacostraca (mal'-a-kōs'tra-kā), *n. pl.* [NL., < Gr *μαλακός*, soft, + *στράκα*, (neut. pl. *μαλακός*), Aristotle's name for *Crustacea* such as crabs, lobsters, etc., < *μαλακός*, soft, + *στράκον*, a shell: see *Ostracea*, *ostracize*, etc.] One of two main divisions of the *Crustacea* proper; the division which is contrasted with *Entomostraca*. By Latreille the group was divided into five orders, *Decapoda*, *Stomatopoda*, *Laemodipoda*, *Anphipoda*, and *Isopoda*. Zoologically speaking its limits have fluctuated so far and so often with different writers that no comprehensive yet exclusive definition is practicable, and the general tendency is now to ignore the term, along with *Entomostraca*. Huxley, however, retains both.

malacostracan (mal'-a-kōs'tra-kan), *a.* and *n.* [< *Malacostraca* + *-an*] I. *a.* Of or pertaining to the *Malacostraca*. Also *malacostraceous*.

II. *n.* A malacostraceous crustacean.

malacostracological (mal'-a-kōs'tra-kō-lō-j'i-ka), *a.* [< *malacostracology* + *-ical*] Of or pertaining to malacostracology.

malacostracologist (mal'-a-kōs'tra-kō-lō-j'i-st), *n.* [< *malacostracology* + *-ist*] A carcinologist or crustaceologist.

malaria (mā-lā'ri-ā), *n*. [= F *malaria*, < It *mal'aria*, bad air—*mala*, fem of *malo*, < L *malus*, bad (see *mal-*, *male*); *aria*, < L *air*, air see *air*.] 1. Air contaminated with some pathogenic substance from the soil, specifically, air impregnated with the poison producing intermittent and remittent fever.—2. The disease produced by the air thus poisoned. In a strict sense the word is a generic term designating intermittent and remittent fever and other affections, such as malarial neuralgia, due to the same cause. Malarial diseases in this sense prevail in all quarters of the globe except the coldest, and the infection of soil and air occurs in both uninhabited and populous regions. The disease is contracted by presence in the locality, and not from the sick, nor do the latter seem to transmit the infection to new places to which they may go. The disease may apparently be introduced into the body through water that is drunk as well as through the air. The development of the poison is favored by heat and moisture. Malarial diseases are apt to increase after the turning up of virgin soil. The poison seems to lie low in the atmosphere, but may be blown to adjacent heights. Besides the well marked

fevers, the malarial poison produces various and often ill marked perversions of the general health, such as neuralgia, neuritis, anemia, digestive disturbances, and albuminuria. The anatomical effects of the malarial poison are enlargement of the spleen, sometimes excessive, darkening of the skin and the presence of a dark pigment in the blood, in amorphous masses. There is found, moreover, in malarial blood a variety of peculiar living bodies which are supposed to be the various stages in the life history of a single organism. This has been called the *Plasmodium malariae*. All these forms of malaria are, as a rule, affected favorably by quinine and to a less degree by certain other drugs, notably arsenic

Milton, *S A*, I 1251

Malicious abandonment, in *law*, the desertion of a spouse without just cause — **Malicious mischief**, in *law* (a) The committing of physical injury to personal property of another injury to property, from wantonness or malice, as distinguished from theft. (b) Any malicious or mischievous physical injury to the rights of another, or of the public in general. *F A Harrison* — **Malicious prosecution** (a) A prosecution set on foot or carried on maliciously, without reasonable cause. From want of probable cause, malice may be inferred. The term is commonly applied to criminal prosecutions, but is also applicable to a civil prosecution. (b) An action brought by the sufferer to recover damages from the person who set on foot such a prosecution — *Syn.* *Evil minded*, ill disposed, spiteful, resentful. See *animosity*

maliciously (mā-līsh'us-ly), *adv.* In a malicious or spiteful manner, with malice, enmity, or ill-will, wantonly, with wilful disregard of duty

maliciousness (mā-līsh'us-ness), *n* The quality of being malicious, extreme enmity or disposition to injure, malignity.

malicorium (mal-i-kō'ri-um), *n* [*L. < malum, an apple, + corium, skin, hide*] The thick and tough rind of the pomegranate-fruit. It has been used as an astringent in medicine, and for tanning

malidentification (mal-i-den'ti-fi-kā'shon), *n* [*< mal- + identification*] A false identification

Mr A Smith Woodward, after an examination of the type of Bucklandium diluvii, "determined that it is truly the imperfect head and pectoral arch of a Silurid." Incredible as such a malidentification on the part of Pictet must appear, I presume the determination of Mr Woodward must be accepted
Amer Nat., XLII 926

maliferous (mā-līf'e-rus), *a* [*< L. malum, an evil, + ferre = E bear¹*] Bringing evil; unwholesome; pestilential. *Bailey*, 1727 [Rare.]

I had really forgotten to mention that gallant, fine-hearted soldier who fell a victim to the maliferous climate of China!
W H Russell, *Diary in India*, I 72

malign (mā-līn'), *a*. [*< OF. maling, F. malin, fem. maligne = Pr. maligne = Sp. Pg. It. maligno, < L. malignus, of an evil nature, orig. "maligenus, < malus, bad, evil, + -genus, -born see -genous. Cf benign.*] 1 Having a very evil disposition toward others; harboring violent hatred or enmity, malicious

Witchcraft may be by operation of malign spirits.
Bacon

2 Unpropitious; pernicious; tending to injure, likely to do or cause great harm as, the malign influence of a designing knave.—3. In *astrology*, having an evil influence

Two planets, rushing from aspect malign
Of fiercest opposition
Milton, *P L*, VI 313

4 Malignant

He that turneth the humours back, and maketh the wound bleed inwards, endangereth malign ulcers, and pernicious imposthumations
Bacon, *Seditious and Troubles* (ed 1887)

—*Syn.* 1. See list under *malignant*.

malign (mā-līn'), *v* [*< OF. maligner, maliner, pervert, deceive, F dial. maligner, malign, < maling, F malin, malign see malign, a*] 1. *trans* 1. To treat with extreme enmity, injure maliciously

Though wayward fortune did malign my state,
My derivation was from ancestors
Who stood equivalent with mighty kings.
Shak, *Pericles*, v 1 80

The scardle of wood and water, with the barrenness of the soil in other places, shew how it is malign of the elements.
Purchas, *Pilgrimage*, p 228

2. To speak evil of, traduce; defame, vilify

Be not light of credens to new rayssed tales, nor crimes, nor suspicious to malynes no man
Babes Book (E E T 8), p 106

Our Puritan ancestors have been misrepresented and maligned by persons without imagination enough to make themselves contemporary with, and therefore able to understand, the men whose memories they strive to blacken
Lowell, *Harvard Anniversary*

—*Syn.* 2 *Defame*, *Calumniate*, etc. See *aspere*

II + *intrans* To entertain malice

This odious fool maligning that anything should be spoke or understood above his own genuine baseness
Milton, *Colasterton*

malignance (mā-līg'nans), *n* [*< malignan(t) + -ce*] Same as *malignancy*

The minister, as being much nearer both in eye and duty than the magistrat, spends him betimes to overtake that diffid malignance with some gentle potion of admonishment
Milton, *Church Government*, II 8

malignancy (mā-līg'nān-si), *n* [*< malignan(t) + -cy*] 1 The state of being malignant in feeling or purpose, extreme malevolence, bitter enmity, malice as, malignancy of heart

In some connexions, malignity seems rather more pertinently applied to a radical depravity of nature, and malignancy to indications of this depravity in temper and conduct in particular instances
T Cogan, *On the Passions*, II § 3

2 In *Eng hist*, the state of being a malignant; adherence to the royal party in the time of Cromwell and the civil war. See *malignant*, *n*, 2—3 The property of expressing malice or evil intent, malignant or threatening nature or character, unpropitiousness. Specifically — (a) In *astrology*, tendency to irremediable harm or mischief as, the malignancy of aspect of the planets.

The malignancy of my fate might perhaps distemper yours.
Shak, *T N*, II 1 4

(b) In *pathol*, virulence tendency to a worse condition as, the malignancy of a tumor

malignant (mā-līg'nant), *a* and *n*. [= *OF. malignant, < L. malignan(t)-s, ppr of malignare, also deponent, malignari, do or make maliciously, < malignus, malign see malign*] I. *a* 1. Disposed to inflict suffering or cause distress; having extreme malevolence or enmity; virulently hostile, malicious as, a malignant heart.

There was a bitter and malignant party grown up now to such a boldness as to give out insolent and threatening speeches against the Parliament itself.
Milton, *Elkonoklastes*, IV

He speaks harshly and insidiously of many of his contemporaries, and towards Cervantes he is absolutely malignant.
Pickens, *Spain Lit*, III 91

2. Virulently harmful or mischievous, threatening great danger, pernicious in influence or effect.

Noxious and malignant plants do many of them discover something in their nature by the sad and melancholic visage of their leaves, flowers, and fruit
Ray, *Works of Creation*, I

Specifically — (a) In *astrology*, threatening to fortune or life, fateful as, the malignant aspect of the stars

O malignant and ill boding stars!
Shak, *1 Hen VI*, IV 5 6

(b) In *pathol*, virulent, tending to produce death; threatening a fatal issue as, a malignant ulcer, a malignant fever, malignant pustule or scarlet fever.

3. Extremely heinous; as, the malignant nature of sin.—**Malignant anthrax**, fever, pustule, etc. See the nouns = *Syn.* 1. Malevolent, bitter, rancorous, spiteful, malign. See *animosity*

II. *n*. 1. A person of extreme enmity or evil intentions, an ill-affected person.

Occasion was taken by certain malignants secretly to undermine his (St. Paul's) great authority in the Church of Christ.
Hooker, *Eccles. Polity*, III 2

2 Specifically, in *Eng. hist*, one of the adherents of Charles I and his son Charles II during the civil war; a Royalist; a Cavalier so called by the Roundheads, the opposite party.

How will dissenting brethren relish it?
What will malignants say?
S Butler, *Hudibras*, I II 680

One may, indeed, sometimes discover among the malignants of the sex a face that seems to have been naturally designed for a Whig lady
Addison, *The Ladies' Association*

malignantly (mā-līg'nant-ly), *adv* In a malignant manner; maliciously; with extreme malevolence; with pernicious influence, also, virulently.

maligner (mā-lī'nēr), *n*. One who maligns or speaks malignantly of another, a traducer, a defamer

I come a spie? no, Roderigo no,
A hater of thy person, a maligner?
So far from that, I brought no malice with me.
Fletcher, *Pilgrim*, II 2

malignify (mā-līg'nī-fi), *v* *t*; *pret* and *pp*. *malignified*, *ppr* *malignifying* [*< L. malignus, malign, + -ficare, < facere, make, see -fy*] To render malign or malignant

malignity (mā-līg'nī-ti), *n*. [*< F. malignité = Sp. malignidad = Pg. malignidade = It. malignità, < L. malignus (t)-s, ill-will, spite, malice, < malignus, malign see malign*] 1 The character or state of being malign, extreme enmity or evil disposition toward another, proceeding from baseness of heart, malice or malevolence, deep-rooted spite

'Then cometh malignité, thurgh which a man annoeth his neighbour
Chaucer, *Parson's Tale*

Thou hast an unrelenting purpose — a steady long breathed malignity, that surpasses mine
Scott, *Kentworth*, IV

2. The quality of being malign or malignant, extreme evilness, heinousness, specifically, in *pathol*, virulence, malignancy

This shows the high malignity of fraud
Some diseases have in a manner worn out their malignity, so as to be no longer mortal
Dryden, *Hind and Panther*, Pref

—*Syn.* 1 *Ill will*, *Enmity* (see *animosity*), maliciousness

2 Destructiveness, deadliness

malignly (mā-līn'ly), *adv* In a malignant manner, with extreme ill-will, unpropitiously, perniciously

malignment (mā-līn'ment), *n*. [*< malign + -ment*] The act of maligning [Rare]

That recrimination and malignment of motive
The Century, XXX 676

Malikite (mal'ik-it), *n* [*< A1 Malik (see def.) + -ite²*] A follower of Malik, the Imam, the founder of one of the four great sects of Sunni Moslems

Malines lace. [*< F. Malines, Mechlin lace*] Same as *Mechlin lace* (which see, under lace).

malinfluence (mal-in'flū-ens), *n*. [*< mal- + influence*] Evil influence

Doubting whether opium had any connection with the latter stage of my bodily wretchedness — (except, indeed, as having left the body weaker and thus predisposed to any mal-influence whatever).

De Quincey, *Confessions*, App. p 189

maling (mā-līng'gēr), *v* *t*; [*< F. malingrer, a slang word meaning 'suffer,' but prob. also at one time 'pretend to be ill,' cf malingreux, weak, sickly, formerly applied to beggars who feigned to be sick or injured in order to excite compassion, < malingre, "sore, scabby, ugly, loathsome" (Cotgrave), now ailing, poor, weakly, < mal-, badly, + (prob.) OF. haingre, haingre, thin, emaciated, F. dial. haingre, ailing, poorly, prob. < L. ager (ager-), sick, ill. The sense is perhaps affected by association with F. malin, evil, malign, and gré, inclination (cf malingre, malingre)] To feign illness; sham sickness in order to avoid duty; counterfeit disease.*

Hemeralopia has been observed to break out epidemically in gaols, camps, etc. I need hardly point out that in such cases a careful examination should always be instituted to guard against malingering
J S Wells, *Dis. of Eye*, p 418

malingerer (mā-līng'gēr-ēr), *n*. One who shams illness, especially for the purpose of shirking work or avoiding duty

Mallard (*Anas boschas*)

Malleifera (mal-ē-if-ē-rā), *n pl.* [NL, neut. pl. of *malleifer*] see *malleiferous*] A superclass of craniate *Vertebrata*, or skulled vertebrates, distinguished by the development of the malleus as a bone of the ear, and by the direct articulation of the lower jaw to the skull. It corresponds to the class *Mammalia*, and contrasts with *Quadrata* and *Lysifera*.

malleiferous (mal-ē-if-ē-rus), *a* [*<* NL. *malleifer*, *<* L. *malleus*, a hammer, a mall, + *ferre*, = *E bear*] Having a distinct malleus, or of pertaining to the *Malleifera*, mammalian.

malleiform (mal-ē-i-fōrm), *a* [*<* L. *malleus*, a hammer, a mall, + *forma*, form] In zool., hammer-shaped.

In some species of *Polynoe* the parapodia give rise, at corresponding points, to large, richly filiated, *malleiform* tubercles. *Huxley, Anat. Invert.*, p. 210.

malleamaroking (mal-ē-ma-rō-kung), *n* [Verbal *n* of **malleamoke*, an unrecorded verb, perhaps equiv. to **malleomake*, lit. act like the malleomake or malleomuck, *<* *malleomake*, *malleomuck*, the fulmar petrel see *malleomuck*] Cf. *D malleomoln*, carousal] *Naut.*, the visiting and carousing of seamen in the Greenland ships. *Sailor's Word-book*.

malleomuck (mal-ē-muk), *n* [Also *malleomock*, *malleomake*, *mollmuck*, *mollmuck*, *mollmuck*, *mollmuck*, *mollmuck*, etc., *<* G. *malleomuck* = *D malleomuck*, a malleomuck, explained, from the D, as 'foolish fly' or 'fool flier', as if *<* D. *mallen*, fool, dally, + *mug*, MD. *mugge*, a 'fly', in allusion to its heedless habits, but the D word is not open to this explanation. D. *mug* means rather 'a snat' (= *E. midge*), and cannot refer to the 'flying' of a bird. The name is prob. of northern origin.] The fulmar petrel, *Fulmarus glacialis*, also extended to some related birds, as albatrosses. See *cut* under *fulmar*.² Also called *malmarsh*.

malleanders (mal-ē-on-dēr), *n pl.* Same as *malleanders*.

malleolar (mal-ē-ō-lar), *a* [*<* *malleolus* + *-ar*] 1 Having the character of a malleolus, as, the *malleolar* process of the tibia. — 2 Of or pertaining to either malleolus, as, a *malleolar* artery.

malleolus (ma-lē-ō-lus), *n*, *pl malleoli* (-lī) [NL, *<* L. *malleolus*, a small hammer, dim of *malleus*, a hammer see *malleus*] 1 In *anat.*, a bony protuberance on either side of the ankle. The two together contribute to the stability of the ankle joint, by locking the astragalus so as to prevent lateral and rotatory movements. In man the outer malleolus is formed by the fibula, the inner by the tibia, and each forms a sort of pulley or trochlea around which wind the tendons of important extensor muscles of the foot. The malleoli are little distinguished in most animals, owing to the different set of the foot upon the leg, or the different configuration of the parts. When as often occurs, the fibula does not reach the ankle, the outer malleolus is wanting unless formed by the tibia. In birds the condyles of the tibia, constituted by ankylosis of proximal tarsal bone, take the name and place of malleoli. 2 In *bot.*, a layer, a shoot bent into the ground and half divided at the bend, whence it emits roots. *Lindley*. — 3 [cap.] In *conch.*, a genus of bivalve shells. *J. E. Gray, 1847*. — **Inner malleolus**, the malleolar process of the tibia, articulating with the inner side of the astragalus, having behind it the tendons of the fibularis posterior and flexor digitorum. — **Outer malleolus**, the enlarged lower end of the fibula, articulating with the outer side of the astragalus, having behind it the tendons of the peroneus longus and peroneus brevis.

malleoramate (mal-ē-ō-rā-māt), *a* [*<* L. *malleus*, a hammer, + *ramus*, a branch see *ramate*] In rotifers, having mallei fastened by unci to rami, as in the *Melicertida*, *Triarthrida*, *Pterodonta*, and *Pedalonota*.

mallet (mal-ēt), *n* [*<* OF. *mallet*, *maillet*, F. *maillet* (= Pr. *maillet* = It. *maglietta*), a wooden hammer, mallet, dim. of *mal*, *mail*, a hammer see *mail*] 1 A small beetle or wooden hammer used by carpenters, stonecutters, printers, etc., chiefly for driving another tool, as a chisel, or the like. It is welded with one hand, while the heavier mall requires the use of both hands. — 2 The wooden hammer used to strike the balls in the game of croquet. — **Automatic mallet**. Same as *dental hammer* (which see under *hammer*). — **Dental mallet**. (a) A light hammer of wood or metal used by dentists for striking the plugger in the operation of filling teeth. It is now superseded in great part by various mechanical contrivances, such as the dental hammer or plugger and the electric plugger. (b) A dental hammer or plugger. See *hammer*.¹

mallet-flower (mal-ēt-flou-ēr), *n* Any plant of the genus *Tupistra*.

malleus (mal-ē-us), *n*, *pl. mallei* (-ī) [NL, *<* L. *malleus*, a hammer, a mall see *mail*] 1 In *anat.*, the proximal element of Meckel's ear-

tilage, in any way distinguished from the rest of the mandibular arch. In man and other mammals the malleus is separately ossified, and is the outer one of the three bonelets or ossicles of the ear lodged in the cavity of the tympanum, connected with the ear drum or tympanic membrane, and movably articulated with the incus. It is named from its hammer-like shape in man, having a head, neck, and handle, or short process, together with a processus gracilis, which lies in the Glaserian fissure. As one of the ossicula auditus, the malleus subserves the function of hearing in mammals. In birds, and many other vertebrates in low mammals, the malleus has a very different office, that of forming part of the suspensorium of the lower jaw, which is its true morphological character. Its specialization in *Mammalia* is peculiar to that class. See *Malleifera*, and *cut* under *hyoid*, *ear*, and *tympanum*.

2 In *ichth.*, one of the Weberian ossicles which form a chain between the air-bladder and the auditory apparatus in the skull of plectrospendylous and nematognathous fishes. It is homologous with the hemapophysis of the third one of the coalesced anterior vertebrae. — 3 In rotifers, one of the paired calcareous structures within the pharynx. In the typical forms it is a hammer-like body, consisting of an upper part or head, called the *manus*, and a lower part or handle, named the *manu bruium*, but in other forms the distinction disappears.

4 [cap.] In *conch.*, a genus of pearl-oysters of the family *Arctiidae*, founded by Lamarck in 1799, the hammer-shells. They have a long winged hinge at right angles with the length of the valve giving a hammer-like shape, whence the name. Young shells are like those of *Arctica* or wing shells, and have a byssal notch; the hammer shape is gradually acquired with age. *M. vulgaris*, the hammer oyster, inhabits eastern seas. See *cut* under *hammer shell*.

5 Same as *u-ar-hammer*.

mallinders (mal-ē-m-dēr), *n pl.* Same as *malleanders*.

Mallophaga (ma-lōf-a-gū), *n pl.* [NL, neut. pl. of *mallophagus* see *mallophagous*] A group of ametabolous apterous parasitic insects with mandibulate mouth-parts and coalesced mesometathorax, jointed antennae and palpi, supernumerary spiracles, and short stout legs ending in hooked claws. They are known as *bird lice*, and are very numerous and diversiform. By some they are regarded as *Hemiptera* degraded and distorted by parasitism and placed with the true lice in a group *Parasita* of *Anophora*, by others they are held to constitute a superfamily or suborder of *Pseudoneuroptera*, and by others again a suborder of *Corrodentia*. See *lice*.¹

mallophagan (ma-lōf-a-gan), *a* and *n* [*<* NL. *Mallophaga* + *-an*] 1 A Same as *mallophagous*.

2 A louse of the group *Mallophaga*.

Mallophagidae (mal-ō-faj-i-dē), *n pl.* [NL, *<* *Mallophaga* + *-ida*] The mallophagous insects regarded as a family of *Pseudoneuroptera*, and corresponding to the suborder *Mallophaga*. They differ from true lice in having mandibulate instead of sucking mouth parts, and in other respects. Most of them live on the plumage of birds, whence the name *bird lice* for the whole of them, but some also infest the pelage of mammals. Some are great pests of the poultry yard and aviary. The genera are numerous, including *Nirmus*, *Trichodectes*, and *Goniodoxa*.

mallophagous (ma-lōf-a-gus), *a* [*<* NL. *mallophagus*, *<* Gr. *mallos*, a lock of wool, + *phagiv*, eat] In *entom.* (a) Devouring feathers or hairs and dried skins, as many coleopterous larvae. (b) Pertaining to the *Mallophaga*. Also *mallophagan*.

Mallorquin (ma-lōr-kin), *n* [*<* Sp. *Mallorquin*, *<* *Mallorca*, Majorca see *Majorcan*] Same as *Majorcan*.

Mallotus (ma-lō-tus), *n* [NL. (Loureiro, 1790), *<* Gr. *μαλλωτός*, furnished with wool, fleecy, *<* (Lat. *μαλλωτός*, clothed with wool, *<* *μαλλός*, wool] 1 A genus of plants of the natural order *Euphorbiaceae*, tribe (*rotoneae*), and subtribe *Acalyphaceae*, characterized by the oblong parallel anther-cells and the numerous (rarely less than fifteen) stamens. The flowers are apetalous, either dioecious or monocious. The plants are trees or shrubs with generally alternate leaves. The male flowers are generally small, on short pedicels in heads along a rachis, the pistillate ones fewer, on long or short pedicels. There are about 70 species, numerous in eastern India, the Malay archipelago, and Australia, with a few in Africa. One species, *M. Philippinensis*, yields the dyestuff known as *kamla*.

2 In *ichth.* (*Cuvier*, 1829), a genus of fishes of the family *Argentinidae*, formerly placed in *Salmonidae*, of which the male has a broad longitudinal villous or fleecy band of scales differentiated from the rest, the caplins. The type is *Mallotus villosus*, the caplin. See *cut* under *caplin*.²

mallo (mal-ō), *n* [*<* ME. *malowe*, *malue*, *<* AS. *malwe*, *malwe* = D. *malwe* = G. *malve* = OF. *malve*, F. *mauve* = Pr. Sp. Pg. It. *malva*, *<* L. *malva*, prob., with some alteration (cf. Common mallow, in England, *Malva sylvestris*, in America sometimes, *M. rotundifolia*. — **Country mallow**, the common mallow. — **Curled mallow**, *M. crispa*, in allusion to the leaves. — **Dwarf mallow**, *M. rotundifolia*, low as compared with *M. sylvestris*. — **False mallow**, a plant of the genus *Nepaea*. — **Globe mallow**, a plant of the genus *Sphaeralcea*. — **Indian mallow**, (a) In America, *Abutilon* introduced from India. Also called *velvet leaf*. See *American jute*, under *jute*. (b) In England, a plant of either of the genera *Sida* and *Urena* — **Jews' mallow**. See *Jews' mallow*. — **Marsh mallow**. See *marsh mallow*. — **Musk-mallow**, *Malva moschata*, so named from the scent of its foliage. — **Rose-mallow**, the genus *Hibiscus*, especially *H. moscheutos*, the swamp rose mallow. — **Tree mallow**, *Lavatera arborea*. — **Venice mallow**, *Hibiscus Trionum*, the bladder ketmia. See *cheese-cake* 3, *dock* 1, 2.

mallow-rose (mal-ō-rōz), *n* Same as *rose-mallow* (which see, under *mallow*).

mallowwort (mal-ō-wért), *n* Any plant of the mallow family, *Malvaceae*.

malls (malz), *n pl.* [A contr. of *measles* (formerly *measles*, etc.)] The measles [Prov. Eng.]

mallum, **malus** (mal-um, -us), *n* [ML, of O. Teut. origin, cf. Goth. *mēl*, time, point, mark, writing, = AS. *mēl*, time, mark, etc. see *meal*] Among the ancient Franks, a court corresponding to the hundred court among the Anglo-Saxons.

The ordinary court of justice is the *mallus* or court of the hundred. *Stubbs*, *Const. Hist.*, § 25.

malm, **maum** (mám, mām), *n* and *a* [Also *maum*, *maum*, *<* ME. *malm*, *<* AS. *mealm*, sand, = OS. *malm*, dust, = OHG. MHG. *malm*, dust, G. Hence *maum*, *maum*, etc.] 1 Earth containing a considerable quantity of chalk in fine particles, a calcareous loam, constituting in the southeastern counties of England a soil especially suited for the growth of hops; a kind of earth suitable for making the best quality of brick without any addition. The brickmakers in the vicinity of London divide the brick earth of that region into strong clay, mild clay (or loam), and malm. *Artificial malm* is a mixture imitating the natural earth. See *malm brick*, below.

To the north west, north, and east of the village (of Selborne) is a range of fair enclosures, consisting of what is called a *white malm*, a sort of rotten or rubble stone, which, when turned up to the frost and rain, moulders to pieces, and becomes manure to itself.

Gilbert White, *Nat. Hist. Selborne* (ed. Bohn), p. 15.

2 [cap.] The name used in Germany, and frequently by geologists writing in English on the geology of that country, for the uppermost of the three divisions of the Jurassic series, all of which at an early day received English provincial names, namely *Liass*, *Dogger*, and *Malm*.

The Malm of the German geologists (which is not the equivalent of the English malm rock) corresponds paleontologically with the Middle and Upper Oolite of England. The rock consists mostly of white limestone, with dolomitic and marly strata, and is in some places over 1,000 feet thick.

3 *pl.* Bricks made of malm earth, or of the artificial malm prepared by mixing clay with chalk.

For making the best quality of bricks, which are called *malm*, an artificial substitute is obtained.

C. T. Davis, Bricks and Tiles, p. 56.

II. a 1 Composed of malm or calcareous loam as, *malm* lands. *Gilbert White* — 2† Soft, mellow. *Hallwell* — 3 Poaceable; quiet. [Prov. Eng.] [In the last two senses spelled *malum*.] — *Malm brick*, a brick made of true or of artificial malm, the latter of which consists of comminuted chalk and clay mixed with a little sand and with breeze, the last being composed of cinders, ashes, and fine coal. These bricks burn to a pale brown color more or less inclined to yellow. They are made in the neighborhood of London, and are also called *malm*. See *malm* — *Malm rock*, the local name of parts of the Upper Greensand, as developed from Westerham west through Surrey, Hants, and Sussex. Also called *malmstone*.

Near Westerham we find harder beds below, which rapidly acquire importance farther west, and become there the chief part of the formation [the Upper Greensand]. These beds are known as *firestone* and *malm rock*, and there also occur smaller quantities of blue rag and chert. The *firestone* is a light colored calcareous sandstone much used for building. The *malm rock* much resembles it, but is slightly more chalky looking.

Topley, Geol. of the Weald, p. 158.

malmt, maumt (mām, mām), *v. t.* [In the quot. spelled *maum*, < *malin*, *maum*, a; cf. *malmy*, 2.] To handle with sticky hands, "paw" [Low.]

Don't be *mauming* and gauning a body so! can't you keep your filthy hands to yourself?

Swift, Polite Conversation, II (Daines).

malmag (mal'mag), *n.* [A native name (?)] The specter, *Tarusus spectrum*, a small lemuroid quadruped. See *Tarusus*.

malmarsh (mal'mārsh), *n.* Same as *mallemuck*. *Montagu*.

malmignatte (mal-mi-nyat'), *n.* [Also *mal-mignatte*.] A spider, *Theridion* or *Lathrodectus malmignattus*, a small black species spotted with red. It is one of a genus of spiders widely distributed in Europe, Africa, Asia, New Zealand, and the United States. Its venom is much more poisonous than that of any other animal, considering the diminutive size of the spider and the extremely minute quantity that will sometimes prove fatal. See *Katspo*.

malming (mal'ming), *n.* [< *malm* + *-ing*.] The preparation of artificial malm by mixing chalk and clay reduced to pulp, and allowing the mixture to consolidate by evaporation.

malmoct (mal'mok), *n.* A variant of *mallemuck*.

Malope (mal'ō-pē), *n.* [NL (Linnaeus, 1737), < L *malope*, mallow.] 1. A genus of plants belonging to the tribe *Malveae*, the mallow family, type of the subtribe *Malopea*, characterized by a style which is longitudinally stigmatose, and by having three distinct bractelets. They are annual herbs, with entire or three parted leaves and pedunculate, usually showy, violet or rose colored flowers. There are 3 species which are confined to the Mediterranean region and are often cultivated for the beauty of the large flowers. *M. trifida* with flowers of rose color or white is sometimes called *three lobed Malope*. The other species are *M. malacoculis*, mallow like *malope*, and *M. multiflora*.

2 [L.] A plant of this genus.

Malopee (mal-lo'pē-ē), *n. pl.* [NL (Endlicher, 1836), < *Malope* + *-ea*.] A subtribe of malvaceous plants belonging to the tribe *Malveae*, and characterized by an indefinite number of carpels, irregularly grouped in a head, with solitary ascending ovules. It embraces 3 genera, of which *Malope* is the type, and 7 species.

Malorussian (ma-lō-rush'an), *n.* [< Russ. *Malorossiya*, Little Russia (*Malorossiskii*, Little-Russian), < *malin*, in comp. *mal-*, adv. *malo*, little, + *Rossiya*, Russia see *Russian*.] Little-Russian (which see, under *Russian*).

Encyc. Brit., XLII 149.

Malpighia (mal-pig'i-ā), *n.* [NL (Plumier, 1703), named after Marcello Malpighi.] A genus of dicotyledonous polypetalous plants, type of the natural order *Malpighiaceae* and the tribe *Malpighieae*, characterized by having an entire 2- or 1-celled ovary, terminal free styles with obtuse stigmas, a calyx with from 6 to 10 glands, and a drupeaceous fruit with 3 crested seeds. They are trees or shrubs with opposite leaves, sometimes covered with stinging hairs, and red, white, or rose colored flowers in axillary or terminal clusters. There are about 20 species, all natives of tropical America. *M. glabra* is the Surinam cherry, *M. urens* the cow hage-cherry, and *M. pumila* the Barbados cherry.

Malpighiaceae (mal-pig-i-ā-sē-ē), *n. pl.* [NL (A. L. de Jussieu, 1811), < *Malpighia* + *-aceae*.] A natural order of dicotyledonous polypetalous plants belonging to the cohort *Geraniales*, typified by the genus *Malpighia*. It is characterized by a 5 parted calyx, some or all of the sepals usually with two glands, by having three carpels, which are either united or distinct, and by solitary ovules without albumen. The order embraces 52 genera and about 600 species, most numerous in the tropics. They are herbs or shrubs, often climbing, with leaves usually opposite and entire, and glandular on the stalk or under side, and yellow or red (rarely white or blue) flowers, commonly growing in terminal clusters.

malpighiaceus (mal-pig-i-ā'shi-us), *a.* [< *Malpighia* + *-aceus*.] In bot., pertaining to or characteristic of plants of the order *Malpighiaceae* specifically applied to hairs formed as in the genus *Malpighia*, which are attached by the middle, and lie parallel to the surface on which they grow.

Malpighian (mal-pig'i-an), *a.* [< *Malpighi* (see *def*) + *-an*.] Of or pertaining to Marcello Malpighi (1628-94), an Italian anatomist and physiologist applied in anatomy to several structures discovered or particularly investigated by him, as follows — *Malpighian body*, one of the glomeruli of the kidney surrounded by its capsule. These form the terminations of the branches of the ur-

niferous tubules, occur in the cortical substance of the kidney, and are about 1/16 of an inch in diameter. They are formed of the expanded end of the tube invaginated by the bunch of blood vessels constituting the glomerulus, which thus are embraced in a double epithelial sac, and the blood is separated from the lumen of the tubule by the thick wall and the epithelium of the inner layer of the capsule. There is reason to think that these bodies do most of the secretion of the water and less important salts of the urine, the remainder of the work of secreting the urine being done by the epithelial cells of the uriniferous tubules.

Malpighian caeca, or *filaments*. Same as *Malpighian tubes*. *Malpighian capsule*. See *Malpighian body*. *Malpighian corpuscle*. (a) A Malpighian body of the kidney. (b) A lymphoid corpuscle of the spleen. See *corpuscle*. *Malpighian layer*, the rete mucosum, the lowermost layer of the epidermis, the stratum spinosum. Also called *rete Malpighi*. See *skin*. *Malpighian pyramids*, in anat., the pale reddish conical masses forming the medullary part of the kidney whose apices project into the calyces of the pelvis of the kidney, and are called *papillae*. *Malpighian tubes* or *vessels*. Certain appendages of the alimentary canal of insects. They are coiled convoluted tubes immediately behind the posterior aperture of the stomach and are generally regarded as representing the liver. See *cut under Blattella*. *Malpighian tuft*, the glomerulus, or vascular network or plexus, in a Malpighian body.

Malpighies (mal-pi-gi-ē-ē), *n. pl.* [NL (A. P. de Candolle, 1824), < *Malpighia* + *-es*.] A tribe of plants belonging to the natural order *Malpighiaceae*, of which *Malpighia* is the type. It is characterized by having ten stamens usually all perfect and often with appendaged anthers, by three styles, which are almost always distinct, and by having carpels inserted on the flat receptacle distinct or united in the fruit, and forming fleshy or woody drupes with from one to three cells.

malposition (mal-pō-zish'on), *n.* [< *mal-* + *position*.] A wrong position, a misplacement, as of a part of the body or of a fetus.

Malpositions of the eye, such as squinting, are the result of too great contraction of one of the recti muscles, usually the internal.

malpractice (mal-prak'tis), *n.* [< *mal-* + *practice*.] 1 Misbehavior, evil practice, practice contrary to established rules.

Fanny was almost ready to fill fibs to screen her brother's *malpractices* from her mamma.

Thackeray, The Kickshaws on the Rhine.

2 Specifically, bad professional treatment of disease, pregnancy, or bodily injury, from reprehensible ignorance or carelessness, or with criminal intent.

malpractitioner (mal-prak'tish'on-ēr), *n.* [< *mal-* + *practitioner*, after *malpractice*.] A physician who is guilty of *malpractice*.

malpresentation (mal-prē-zen-tā'shon), *n.* [< F. *mal-* + *présentation*.] In obstet., abnormal presentation in childbirth, as of a shoulder.

malpropriety (mal-pro-pri-ē-ti), *n.* [= F. *mal-propre*, as *mal-* and *propriety*.] Want of proper condition, slovenliness, dirtiness. [Rare.]

The whole interior had a harmonious air of sloth, stupidity, and *malpropriety*.

E. Faghton, The Graysons, xvii.

malshert, *v. t.* [ME *malsheren*, *malsheren*, *malsheren*, < AS **malshcan*, in verbal *malshering* (= OHG *malshcan*), fascination, cf. OS *malsh*, proud, = Goth **malshs*, foolish.] To wander.

By the addition of hops and the subsequent processes of cooling, fermentation, and clarification, the wort is converted into port, ale, or beer. The alcoholic fermentation of the wort, without the addition of hops, and distillation yield crude whisky. Barley is the grain most used for malting in the manufacture of beer, but wheat, rye, and other grains are largely malted for whisky. Barley yields about 92 per cent of its weight of dried malt.

Blown malt, malt dried in a kiln in which the heat is raised quickly to 100 F, and then lowered. It is so called from its distended appearance. *Encyc Brit* — **Malt-cleaning machine**, in a brewery, a form of grain cleaner for freeing barley, previous to malting, from all extraneous substances, such as other grain, seeds of grass and weeds, dust, and foul matters, a cleaning and sorting machine.

II. a Pertaining to, containing, or made with malt — **Malt liquor**, a general term for an alcoholic beverage produced merely by the fermentation of malt, as opposed to those obtained by the distillation of malt or mash.

malt¹ (mált), *v* [*< malt¹, n.*] **I. trans** To convert (grain) into malt. The steps in the process of malting are four. First, steeping in water from twenty four to forty hours, by which the grain takes up from 10 to 30 per cent. of water, swells, and begins to germinate. Second, couching, in which the steeped grain is piled in heaps on a floor, usually made of flagstones, and wherein the growth of the rootlets is aided by heat generated in the mass. Third, flooring, in which the germinating grain is spread upon a floor in charges called *floors*, and stirred to expose it to air, and in which the growth of the rootlets is checked and the germination of the acrospires is carried to the desired limit. Fourth, drying, in which the germination is completely arrested by heat in a malt kiln. The maltster decides, from the length and appearance of the acrospires as to when the conversion of the starch has been carried to the right limit. The dried acrospires and the rootlets are broken off by handling in the kiln, and are removed by sifting. The chemical changes effected by the partial germination and subsequent treatment of the grain are chiefly the conversion of the azotized substances into diastase, the conversion of the starch into grape sugar by the action of the diastase, and the imparting of color and flavor to the malt in the kiln. The malt is either pale or dark in color, according to the degree of heat and the length of time it is exposed to heat in the kiln, and a peculiar flavor is derived from unmycetogenic oil generated in the husk.

Maltese (mált-tēs or -tér'), *a* and *n* [*< Malta* (*< 1. Melita, Melite, Gr. Μελίτη*) (see def.) + *-ese*] **I. a** Pertaining to Malta, an island in the Mediterranean, formerly belonging to the Knights Hospitallers or Knights of Malta (1530-1798), afterward to France, and since 1800 to Great Britain, or to the group of islands of which it is the chief — *Maltese cat, dog, stone, etc.* See the nouns. — *Maltese cross*. See *cross of Malta*, under *cross*.

II. n. 1. A native or an inhabitant of the island of Malta — **2.** The language spoken by the natives of Malta. Its chief element is a corrupt form of Arabic mixed with Italian.

malt-extract (mált'eks'trakt), *n* A concentrated unfermented infusion of malt. It is used in medicine in cases where it is desirable to further the nutrition.

malt-floor (mált'flór), *n* 1 A perforated iron or tile floor in the chamber of a malt-kiln, through which the heat ascends from the furnace below, and dries the grain laid upon it. — **2.** A floor on which grain is spread to undergo partial germination in the process of malting. — **3.** A charge of grain spread on a floor of a malt-house to undergo partial germination. See *malt* and *malting*.

maltha (mált'hä), *n* [*< L. maltha* (see def.), *< Gr. μάλα, μάλιν*, a mixture of wax and pitch used for calking ships] A bituminous substance midway in consistency between asphaltum and petroleum. From its tarry appearance, it is sometimes called *marinal tar*. It is the base of the Mexican Spanish. By the Romans the word *maltha* was used as the name of various cements, stuccos, and other preparations of a similar kind employed for repairing cisterns, roofs, etc., and of some of these what is now known as *maltha*, or some other form of bitumen, in all probability constituted a part. Asphaltum and maltha were also used from the earliest times (as stated in Genesis with regard to the building of the tower of Babel) for the same purpose for which our common mortar is employed, namely to bind together stones and bricks.

malt-house (mált'hous), *n*. [*< ME. malthous*, *< AS malthūs*, *< malt*, malt, + *hus*, house] A house in which malt is made.

Malthusian (mal-thū'si-an), *a* and *n* [*< Malthus* (see def.) + *-ian*] **I. a** Of or pertaining to the Rev. T. R. Malthus (1766-1834), an English economist, or to the doctrines set forth in his "Essay on the Principle of Population." In this work he first made prominent the fact that population, unless hindered by positive checks, as wars, famines, etc., or by preventive checks, as social customs that prevent early marriage, tends to increase at a higher rate than the means of subsistence can, under the most favorable circumstances, be made to increase. As a remedy he advocated the principle that society should aim to diminish the sum of vice and misery, and check the growth of population, by the discouragement of early and imprudent marriages, and by the practice of moral self-restraint.

II. n. A follower of Malthus; a believer in Malthusianism.

Malthusianism (mal-thū'si-an-izm), *n*. [*< Malthusian + -ism*] The theory of the relation of population to means of subsistence taught by Malthus. See *Malthusian*, *a*.

malting (mált'ting), *n* [*< malt¹ + -ing²*] A medicinal preparation made by digesting sprouting malt in water, expressing the solution, precipitating with alcohol, and drying the precipitate, which is impure diastase.

malting (mált'ting), *n* [Verbal *n* of *malt¹, v*] 1. The artificial production of germination in grain for the purpose of converting its starch into the greatest possible amount of sugar, as a preparation for brewing, or the conversion by fermentation of this sugar into alcohol.

Malting consists of four processes, steeping, couching, flooring, and kiln drying. *Encyc Brit, IV 367*

2 A place where malting is carried on. [Rare and inaccurate.]

The town also possesses brass foundries, *maltings*, lime-kilns, and brickyards. *Encyc Brit, XXIV 508.*

malt-kiln (mált'kil), *n*. A heated chamber in which malt is dried to check germination. Some kilns are fitted with machinery for stirring the malt on the floor of the kiln, this mechanism being called a *malt-turner*. A smaller apparatus with mechanical devices for stirring the malt is commonly known as a *malt-drier*.

malt-mad (mált'mad), *a* Maddened with drink, addicted to drink, drunken.

These English are so *malt-mad*, there's no meddling with 'em. *Fletcher, Pilgrim, III 7*

maltman (mált'man), *n*; *pl. maltmen* (-men)

A maltster. *Gascongne, Steele Glas, 79*

malt-master (mált'más'tér), *n*. A master maltster.

malt-mill (mált'mil), *n* A mill for grinding malt.

maltose (mált'tōs), *n* [*< malt¹ + -ose*] A sugar (C₁₂H₂₂O₁₁ + H₂O) which forms hard white crystals, is directly fermented by yeast, and is closely like dextrose in its properties. It is produced from starch paste by the action of malt or diastase.

malt-rake (mált'rāk), *n* An implement for stirring malt on the floor of a malt-kiln. A hoe-shaped part scrapes the grain from the floor, and it falls through fingers set above and behind the hoe.

maltreat (mal-trēt'), *v. t.* [*< mal- + treat*] To treat ill, abuse, treat roughly, rudely, or with unkindness.

Yorick indeed was never better served in his life, — but it was a little hard to *maltreat* him after, and plunder him after he was laid in his grave.

Sterne, Tristram Shandy, II 17

maltreatment (mal-trēt'ment), *n* [*< maltreat- + -ment*] The act of maltreating, or the condition of being maltreated, ill treatment; ill usage; abuse.

malt-screen (mált'skrén), *n*. A machine for freeing malt or barley from foreign matters.

maltster (mált'stér), *n* [*< ME maltster*, *< malt¹ + -ster*] A maker of or dealer in malt. Rarely also *malter*.

malt-surrogate (mált'sur'ō-gāt), *n* Any substitute, as corn, potatoes, rice, or potato-starch, used in the manufacture of beer in place of a part of the malt required for the normal manufacture.

malt-tea (mált'tē), *n* The liquid infusion of the mash in brewing, water impregnated with the valuable part of the malt, leaving behind the husks or grains. See *grain¹, 6*, and *wort²*.

malt-turner (mált'tér'nér), *n*. A mechanical device for turning malt as it is heated in the kiln. See *malt-kiln*, and compare *malt-rake*.

maltworm (mált'wérn), *n* A person addicted to the use of malt liquor.

Then doth she trowle to me the bowle,

Malurinae (mal-ū-rī-nē), *n. pl.* [NL, < *Malurus* + *-inae*] A group of oscine passerine birds, commonly referred to the family *Sylviidae* or *Luscinidae*, typified by the genus *Malurus*, the soft-tailed warblers. They are characteristic of the Australian region, and include some of the most beautiful of warblers. Those of the remarkable genus *Stipiturus* are known as *emu-wrens* (See cut under *Stipiturus*) The limits of the group are not well defined, and the term is used with varying latitude by different writers.

Malurus (mā-lū-rus), *n* [NL, for **Malacurus* < Gr *μαλακός*, soft, + *ουρά*, tail] The typical genus of *Malurinae*, founded by Vieillot in 1816. The type-species is *M. cyanus* of Australia, a very beautiful little bird known as the *superb whistler* or *blue wren*

Malva (mal'vā), *n* [NL (Malpighi, 1675), < L. *malva*, mallow: see *mallow*] A genus of dicotyledonous polypetalous plants belonging to the natural order *Malvaceae*, the mallow family, the tribe *Malveae*, and the subtribe *Eumalveae*. It is characterized by having the styles stigmatous along the inner sides, by three distinct bractlets growing beneath the calyx, and by carpels which are naked within and have no beaks. About 10 species are known, natives of the temperate regions of the Old World and of North America. They are herbs with leaves which are usually angularly lobed or dissected, and purple, rose colored, or white flowers with emarginate petals, growing in the axils, either solitary or in clusters. The name *mallow* belongs peculiarly, though not exclusively, to this genus. See *mallow* and *cheese cake*, 8

Malvaceae (mal-vā'sē), *n. pl* [NL (A. L. de Jussieu, 1789), fem pl of L. *malvaceus*, malvaceous: see *malvaceous* and *-aceae*] A large order of dicotyledonous polypetalous plants belonging to the cohort *Malvales*, typified by the genus *Malva*, and characterized by monadelphous stamens with one-celled anthers. They are herbs, shrubs, or trees with alternate leaves, which are entire, much divided, or palmately lobed, and regular five-parted flowers, almost always showy, and usually purple, rose colored, or yellow. The uniform character of the order is to abound in mudclays and to be totally destitute of all unwholesome qualities, many are cultivated for ornament, and many others are used medicinally. The cotton-plant, *Gossypium*, belongs to this order, as do also the hollyhock, the hibiscus, the abutilon, and nearly all the plants called mallows. The order embraces 64 genera and more than 800 species, found everywhere throughout the world, except in the arctic regions.

malvaceous (mal-vā'shūs), *a* [< L. *malvaceus*, of mallows, < *malva*, mallow: see *mallow*] Pertaining or belonging to the order *Malvaceae*, or mallow family.

Malvales (mal-vā'lēs), *n. pl* [NL (Lindley, 1833), < L. *malva*, mallow: see *Malva*.] A cohort (alliance of Lindley) of dicotyledonous polypetalous plants belonging to the first series, *Thalamiflorae*. It is characterized by the valvate calyxlobes or sepals, which are five in number, rarely fewer, by having the petals as many as the sepals or sometimes wanting, by stamens which are indefinite in number or monadelphous, and by an ovary with from three to an indefinite number of cells, rarely fewer. The cohort embraces 64 genera, *Malvaceae*, *Sterculiaceae*, and *Tiliaceae*.

malvasia (mal-vā-sē'a), *n* [It: see *malmsay*.] Originally, a wine of Napoli di Malvasia in the Morea, Greece; now, a name given also to some other wines, especially to certain Italian and Sicilian wines, as to a brand of Marsala, of

similar quality, sweet and somewhat heady. See *malmsay*.

Malvastrum (mal-vas'trum), *n*. [NL (Asa Gray, 1848), < *Malva* + Gr. *στρόφιον*, star (alluding to the star-like arrangement of the bracts)] A large genus of plants of the order *Malvaceae*, tribe *Malveae*, and subtribe *Eumalveae* the false mallows. It is characterized by styles which are branched at the apex and have terminal capitate stigmas, and by from one to three distinct bractlets under the calyx, or the latter sometimes wanting. They are tall or low herbs, with leaves which are divided, or entire and cordate, and scarlet, orange, or yellow flowers which are axillary or grow in terminal spikes. There are about 80 species, growing in North and South America, and in Africa. See *hollow-stalk*.

Malvaceae (mal'vā-ē), *n. pl* [NL (Endlicher, 1836), < *Malva* + *-ae*] A tribe of plants of the order *Malvaceae*, characterized by the columns of stamens being anther-bearing at the apex, the styles having as many branches as there are carpels, and the cotyledons foliaceous and variously folded. The tribe, of which *Malva* is the type, embraces 24 genera and about 400 species. To it belong many of the important plants of the order.

malversation (mal-vēr-sā'shon), *n* [< F. *malversation* = Sp. *malversacion* = Pg. *malversação*, evil conduct, < L. *male*, badly, + *versatio* (n-), a turning, < *versari*, turn about, occupy oneself: see *converse*, *conversation*] Evil conduct; fraudulent or tricky dealing; especially, misbehavior in an office or employment, as by fraud, breach of trust, extortion, etc.

Mamillaria (mam-a-lū'ri-a), *n* [NL (Haworth, 1812), so called in allusion to the protuberances on the stem, < L. *mamilla*, breast, nipple: see *mammilla*] A genus of *Cactaceae*, the cactus family, and of the tribe *Technocactae*. It is characterized by a short stem, with the flowers in the axils of the tubercles which are mamilliform, elongated or angular, rarely uniting to form a fleshy ridge, and have a cushion-like apex bearing a tuft of radiating spines; the flowers are usually arranged in a transverse zone, and have an imbricated smooth ovary. About 400 species are known, natives of Mexico, though some are found in the southern part of the United States, Brazil, Bolivia and the West Indies. The plants rarely exceed 6 or 8 inches in height. The stems are simple tufted globose or cylindrical, and covered with tubercles, from the axils of which arise a zone of white, yellow, red, or rose colored flowers, which remain open during the day only, and are frequently large and showy. See *nipple cactus*.

See *mama*] 1 Pl. *mamma* (-ē) The mammary gland and associated structures, the characteristic organ of the class *Mammalia*, which in the female secretes milk for the nourishment of the young, a breast or udder. The *mamma* is essentially a conglomerate gland consisting of lobes and lobules, secreting milk, which is conveyed from the ultimate ramifications of the organ by a system of converging lactiferous or galactophorous ducts, to be discharged through one or several main orifices at the summit of the gland, where is the nipple or *mamilla*. The *mamma* is subcutaneous, and may be regarded as a highly developed and specialized sebaceous follicle. *Mammæ* vary much in number and position; they may be 2, 4, 6, 8, to 12 or more, usually an even

number, being paired, and may be pectoral, axillary, ventral or abdominal, or inguinal. They are sometimes quite high on the sides of the animal, but are never dorsal. An apparently single and median mamma, as the udder of the cow, results from the coalescence of as many mammae as there are teats. In marsupials they are contained in the pouch and may be circularly or irregularly disposed, or of odd number. In monotremes they are devoid of a nipple, whence the name *Amata* for these animals. The mamma develops at puberty, and comes into functional activity during gestation. The structure is common to both sexes, but as a rule remains rudimentary and functionless in the male.

Mammalia (ma-mā'li-ā), *n* pl [NL (see *animalia*), neut. pl. of LL. *mammalis* (neut. sing. as a noun, *mammale*), of the breast, see *mammal*] In *zool*, the highest class of *Vertebrata*, containing all those animals which suckle their young, and no others, mammiferous animals, the mammals. With the exception of the lowest sub-class, the monotremes or *Ornithodipla*, which lay eggs like birds, *Mammalia* are viviparous bringing forth their young alive and, with the same exception, the mammary gland is provided with a nipple for the young to suck. They have no gills but breathe air by means of lungs, which are primitively an offset of the alimentary canal. The blood is warm, the heart is completely four chambered or quadrilocular, with two auricles and two ventricles, and its right and left sides are entirely separate after birth, when the arterial and venous circulation and the pulmonary and systemic vessels become differentiated. The heart and lungs are situated in the thoracic cavity, which is completely shut off from the abdomen by a muscular diaphragm. The aorta is single and sinistral, curving over the left bronchus. The blood contains red circular non-nucleated blood disks and white blood corpuscles. The brain has large cerebral hemispheres, which are more or less extensively united by commissures, especially by a corpus callosum which when well developed roofs over more or less of the lateral ventricles. The skull has two occipital condyles and an ossified basilar pituitary. The lower jaw composed of a pair of simple mandibular ramus is directly articulated by a convex condyle with the glenoid fossa of the squamosal. The malleus and incus become specialized auditory ossicles, lodged like the stapes in the cavity of the tympanum (see *Mallefera*). Limbs are always present. There are ordinarily two pairs, anterior and posterior, or pectoral and pelvic, but the latter are sometimes aborted as in cetaceans and shrews. The ankle joint, if there is one, is always formed between crural and tarsal bones, and is never mediocrural. The body is usually more or less hairy, sometimes naked, rarely scaly or with a bony exoskeleton. The class *Mammalia* is definitely circumscribed, no transitional forms being known. It has been subdivided in various ways. 1. Imms has 7 orders: *Primates*, *Bruta Fera* (*Gloria Pecora*, *Bellua*, and *Cete*, with 40 genera in all), *Civica* made the 9 orders *Humana*, *Quadrumania*, *Carnaria Marnipata*, *Rodentia Edentata*, *Pachydermata*, *Umnantia* and *Cleora*. Owen divided *Mammalia* primarily into 4 subclasses, according to the character of the brain and 14 orders, as follows: *Archcephala Humana*, *Gurecephala* — *Quadrumania*, *Carnaria*, *Artiodactyla*, *Perissodactyla*, *Proboscidea*, *Sirenia*, *Cetacea*, *Lamncephala* — *Bruta*, *Chiroptera*, *Insectivora*, *Rodentia*, *Lyncecephala* — *Marnipata*, *Monotremata*. Dana's prime divisions correspond to Owen's by other names, *Archonta*, *Megasthena*, *Microsthenia* and *Oothecidea*. In 1872 Gill arranged mammals in 3 subclasses and 14 orders, as follows: subclass *Monodactyla*, containing all placental mammals, orders *Primates*, *Fera*, *Ungulata*, *Toxodontia* (fossil), *Hyracidea*, *Proboscidea*, *Sirenia*, *Cete*. In one series *Edentabilia*, and *Chiroptera* *Insectivora*, *Gloria*, *Bruta*, in a second series *Inedentabilia*, subclass *Dactylipha*, the implantental mammals, order *Marnipata* alone, subclass *Ornithodipla* the oviparous mammals, order *Monotremata* alone. This is substantially the classification now almost universally current, but it is exclusive of certain fossil groups which require ordinal rank. The families of mammals now recognized are about 150 in number; the genera nearly 1,000; the living species are about 3,250. Remains of mammals abound in all Tertiary deposits, and a few forms have been found in Mesozoic beds. Also called *Mammifera* and *Mallefera*

Mammea (ma-mē'a), *n* [NL (Linnaeus, 1737), < Haytian *mamey* (> Sp. *mamey*)] A genus of dicotyledonous polyepetalous trees of the natural order *Grutifera* and tribe *Calophyllea*, characterized by a calyx which is closed before the flower expands, and then becomes valvately 2-parted, and by a 2- to 4-celled ovary containing four ovules, usually with a peltate stigma. They are trees with rigid coriaceous leaves, often covered with pellucid dots, axillary flowers, either solitary or in clusters, and fruits which are indehiscent drupes with from one to four large seeds. There are 5 species, natives of America and tropical Asia and Africa. *M. americana* is a tall tree with a thick spreading head, somewhat resembling *Magnolia grandiflora*, and shows white sweet scented flowers. The fruit, known as the *mammea apple* or *South American apricot*, is much esteemed in tropical countries and is eaten alone, or cut in slices with wine or sugar, or preserved in various ways. It is yellow, and as large as a cocoanut or small melon, the rind and the pulp about the seeds are very bitter, but the intermediate portion is sweet and aromatic. From the flowers a spirituous liquor is distilled (see *eau de rose*, under *eau*). The seeds, which are large, are used as anthelmintics and a gum distilled from the bark is used to destroy chiggers. The tree is a native of the West Indies and tropical America, but is often cultivated in the tropics of the Old World

mammoth (mam'oth), *n.* and *a.* [= F. *mammouth* = Sp. *mamut*, *mammath* = G. *mammuth*, *< Russ mamantu*, a mammoth, so called by a Russian named Ludloff in 1696, said to be *< Tatar mamma*, the earth, "because, the remains of these animals being found embedded in the earth, the natives [Yakuts and Tungusians] believed that they burrowed like moles" (*Imp. Dict.*)] 1. *n.* An extinct species of elephant, *Elephas primigenius*. It is nearly related to the existing Indian elephant, having teeth of similar pattern, and is believed to have been the ancestor of this species but it was thickly covered with a shaggy coat of three kinds, long stiff bristles and long flexible hairs being mixed with a kind of wool. This warm covering enabled it to endure the rigor of winter in its native regions. The tusks were of great size and much curved. An entire mammoth was discovered in 1799 by a Tungusian fisherman named Schumacher, embedded in the ice on the banks of the river Lena in Siberia, in such complete preservation that its flesh was eaten by dogs, wolves, and bears. It was about 9 feet high and 16 feet long, with tusks 9 feet long measured along the curve. In later years the bones and tusks of the mammoth have been found abundantly in Siberia, and the fossil ivory has been of great commercial value. This article had been known for many centuries before the discovery of the animal itself, and the mammoth is now supposed to have ranged, before, during, and after the glacial epoch, over the greater part of the northern hemisphere. That it was contemporary with prehistoric man is shown by the discovery of a drawing of the animal scratched on a piece of its own ivory found in a cave in France. This species is more especially known as the hairy mammoth. The name *mammoth* is extended to other fossil elephants of the same genus or of the subfamily *Lophotus* but is not applicable to the mastodons, of the subfamily *Mastodontinae*.

Not found in Gr., nor in L., unless it be = L. *mas* (*man*), a male (if that stands for orig. **mann*), > ult. E. *male*, *masculine*, *marital*, *marry*, etc. see these words. The ult. origin of the Teut. and Skt. word is unknown. It is usually explained as lit. 'the thinker', *< *man*, think (> ult. E. *mind*, *man*, *l. men* (t-), *mind*, > E. *mental*, etc.), but that primitive men should think of themselves as 'thinkers' is quite incredible that is a comparatively modern conception. Another derivation, referring to L. *maneri*, *romani*, dwell, is also improbable. It is not likely that any orig. significant term old enough to have become a general designation for 'man' before the Aryan dispersion would have retained its orig. significance. The E. *man* retains the senses of L. *vir* and *homo*, in D. G. Dan. the word cognate with E. *man* means *in*, while a derivative, D. G. *manich*, Dan. *manneskje*, etc., means *homo* see *manich*, *manich*. The neg. pl. of *man* is due to original *i*-umlaut, the AS. pl. *men*, *menn*, being orig. **manni*, changed to **mann* by umlaut, and then abstr. to *mann*, *men* by loss of the final vowel, the radical vowel thus accidentally changed in the plural, coming to be significant of number. A similar change appears in *feet*, *geese*, *mice*, etc., *pl. of foot*, *goose*, *mouse*, etc.] 1 In *zool.*, a featherless plantigrade biped mammal of the genus *Homo* (which see), *H. sapiens*, a species of the family *Hominidae* or *Anthropidae*, order *Primates*, class *Mammalia*, of which there are several geographical races or varieties. Blumenbach divided mankind into five varieties: (1) *Caucasian*, having a white skin, (2) *Mongolian*, having an olive skin, (3) *Ethiopian*, having a black skin and black eyes, (4) *American*, having a dark skin more or less of a red tint, (5) *Malay* having a brown or tawny skin. Professor Huxley has divided man into five groups: *Austral*, *Negroid*, *Mongoloid*, *Vanchochrone* and *Melanochrone*, and there are many other divisions, on linguistic or physical grounds, or both, but none that has now general or wide acceptance.

Lady Bransley, *Voyage of Sunbeam*, I 1.

—*Syn* 3 *Manage*, *Conduct*, *Direct*, handle, superintend, supervise, order, transact. *Manage* literally implies handling, and hence primarily belongs to smaller concerns, on which one may at all times keep his hand as, to *manage* a house, to *manage* a theater. Its essential idea is that of constant attention to details as, only a combination of great abilities with a genius for industry can *manage* the affairs of an empire. To *conduct* is to lead along, hence to attend with personal supervision, it implies the determination of the main features of administration and the securing of thoroughness in those who carry out the commands. It is used of both large things and small, but generally refers to a definite task, coming to an end or issue as, to *conduct* a religious service, a funeral, a campaign. *Direct* allows the person *directing* to be at a distance or near, the word suggests more authority than *manage* or *conduct*. See *govern* and *guide*, *v* t

The American manatee, to which the name was originally given, and to which it specially pertains is *Manatus americanus*, *australis* or *latirostris*, whether of one or two species. The manatee inhabits the shallow waters of rivers and estuaries on the eastern coast of tropical and subtropical America, from Florida and some of the West India islands to about lat 20° S. It is a sluggish, timid, and inoffensive animal, found in small herds, feeding on aquatic vegetation, and attaining sometimes a length of 8 or 10 feet. In general aspect the manatee resembles a small whale or other cetacean, but it belongs to a different order, though it was formerly considered a herbivorous cetacean. The body is naked and stout, shaped like that of a fish without trace of hind limbs, ending in an expansive shovel or spoon shaped tail the fore limbs are flippers or paddles without outward distinction of digits, but with flattened nails the eyes and ears are small and the whole physiognomy is peculiar owing to the timidity and great mobility of the muzzle. There is an entirely distinct species *Manatus senegalensis* found on the western coast of Africa to which the name extends.

Manatidae (mā-nat'ī-dē), *n pl* [NL, *< Manatus + -idae*] A family of sirenians, typified by the genus *Manatus*. 2 [cap] A genus of plants of the natural order *Solanaceae*, the nightshade family, and tribe *Atropaceae*. The corolla is induplicate in the bud, the calyx is foliaceous and five parted, and the pedicels are partially clustered among the radical leaves. They are herbs nearly stemless rising from a thick, fleshy, often forked root and bear tufts of large, ovate, lance-shaped leaves and quite large pale bluish violet, white or purple flowers, which are reticulate veined. Five species have been described (but these may be reducible to one), found throughout the Mediterranean region. The ordinary plant has been commonly known as *M. officinale* but this includes a spring and a fall kind sometimes separated as species, *M. vernalis* and *M. autumnalis*. The *mandragora* or *mandrake* has long been known in medicine and has been the subject of much superstition. *See mandrake*. **mandrake** (man'drāk), *n* [*< ME* *mandrake*, *mandrake*, an alteration, appearing simulating *drake*², of earlier *ME* *mandrag*, *mandragt*, short for *mandragora*, q. v. 1 A plant of the genus *Mandragora*. The mandrake has poisonous properties, and acts as an emetic purgative, and narcotic. It was in use in ancient times especially for its narcotic effects, and is said to have been employed as an anesthetic. It has been regarded as an aphrodisiac, and used in amorous incantations, as a love amulet etc. According to an old fancy the mandrake shrieks when pulled from the ground. The resemblance of its commonly forked root to the human body is probably the ground of this superstition as well as of the repute of the plant as an aphrodisiac.

mandrel, mandril (man'drel, -dri), *n* [An alteration of **mandrin*, < F *mandrin*, a mandrol, former, strike, perhaps < L *mandra*, a stall, < Gr *μάνδρα*, a stall, the bed in which the stone of a ring is set see *madrigal*] 1 In *neck*, a cylindrical bar or spindle, either of uniform diameter, of different diameters, or tapered, used for a variety of purposes, but chiefly for the support of objects formed with holes, into which the mandrel is forcibly driven in order to hold them firmly while turning in a lathe, or in an analogous machine, or in operating upon them with a file. Specifically—(a) An axis attached to the head stock of a lathe, to support, during the process of turning, any material which is bored or pierced with a central hole. It has often some adjustable device for securing it to the material, and is then known as an *adjustable mandrel*. (b) Any arbor or axis to support a tool, as a mandril for a circular saw or circular cutter. (c) A rod or former for shaping forgings, or a plug core for metal or glass castings.

2 A miners' pick [Eng.]—3 In *metal-working* by the spinning process, the form, usually of wood, upon which the thin plate of metal or blank is pressed in order that the revolution may give it the form of the mandrel—**Adjustable mandrel**. See def. 1 (a)—**Expanding mandrel**, a mandrel constructed to engage and firmly hold a piece of material on the inside of a hole of uniform diameter, for turning, etc. Such mandrels are of various construction. A common form is a central arbor having grooves with inclined plane bottoms in which move simultaneously and equally tapered key slides, the outer sides of which are always parallel with each other and with the axis of the arbor. When moved longitudinally, these slides expand against the inside of the hole with force, holding the piece by jamming friction—**Flexible mandrel**, a spiral spring placed in a metal tube to prevent it from flattening or collapsing when bent.—**Hicks's mandrel**, an expanding mandrel for turning rings, named from its inventor. It is an arbor with a cone in the middle, in the periphery of which, at equal distances from each other, are formed longitudinal dovetailed grooves carrying wedge shaped slides actuated simultaneously and equally by a nut on the end of the cone, and thus expanded to fit the bore of the ring to be turned.—**Traversing mandrel** (a) A mandril which moves longitudinally. (b) A mandril fitted to a bearing or bearings of a support which may be set in the tool post of the slide rest of a lathe, or in some other traversing device. Such mandrels are used for expanding ramers and analogous tools, and they are usually driven by a pulley and belt mechanism.

mandrel (man'drel), *v t* [*< mandrel, n*] To operate upon with mandrels, as a bronze gun. This is done by driving steel mandrels of gradually increasing size through the bore, whereby the strength of the gun is greatly increased, the limit of elasticity being in some cases nearly or quite doubled.

mandrel-collar (man'drel-kol'är), *n* A collar formed on the mandrel of a lathe, against which the chucks, face-plates, etc., abut squarely when screwed upon the mandrel-nose.

mandrel-frame (man'drel-främ), *n* A frame or head-stock secured by bolts to the end of a lathe-bed to support the mandrel.

mandrel-lathe (man'drel-läth), *n* A lathe adapted for turning long work and hollow work. It is so designed that the material for hollow work can be clamped by a chuck on the end of the mandrel in the head stock. Long work is supported in the lathe by the head and tail centers. F. H. Knight

mandrel-nose (man'drel-nöz), *n* The inner end of a lathe-mandrel, upon which a screw thread is formed for receiving and holding face-plates, chucks, etc.

mandrel-screw (man'drel-sküb), *n* The screw on the mandrel-nose to which chucks, face-plates, etc., are fitted, and by which they are attached to the mandrel.

mandril, *n* See *mandrel*.

mandrill (man'dril), *n* [= F *mandrill* = Sp *mandrillo* = It *mandrillo*, a mandril, said to be from a native W. African name. If *drill* is original, the form *mandril* is an E compound, and the F Sp. It forms are from E.] A kind of baboon, the great blue-faced or rib-nosed baboon, the hog-ap, *Cynocephalus maimon* or *normon*, the largest and most formidable, ferocious, and hideous of baboons. The canine teeth are of enormous size, causing a protuberance of the cheeks, which are naked and fantastically striped with brilliant colors. The facial callosities are of great size and bright red color. The animal is often seen in captivity. The mandrills are natives of the western coast of Africa, where they associate in large troops which are the terror of the negroes. They often plunder villages and cultivated fields with impunity. See *cut under baboon*.

manducable (man'dü-ku-bl), *a* [= F *Sp manducable*, < L *manducabilis*, < *manducare*, chew see *manducate*] Capable of being manducated or chewed, fit to be eaten.

manducatory (man'dü-kä-tö-r), *a* [*< manducate* + -ory] Pertaining to or employed in chewing, in *entom*, specifically, having a mandibulate form for eating.

manducus (man-dü-kus), *n* [L, a glutton, a chewer, esp as in def., < *mandere*, chew see *manducate*] In *Rom antiq*, a comic character of Italian origin, wearing a mask with gaping jaws set with great teeth, which were made to clash against each other. This personage figured in various public processions as well as in comedies on the stage, and served Roman mothers as a bugbear in restraint of childish misconduct.

mandyas (man'dü-as), *n* [*< Gr μανδύας*, *mandyas*, a woolen cloak, L *gr* as in def., said to be of Pers. origin.] In the *Gr Ch*, a kind of large and loose mantle, resembling a cope, fastened at the throat and sometimes at the lower corners also, and reaching almost to the feet. It is worn by monks and nuns, by archmandrites, and at times by bishops who were regularly appointed to the monastic orders. The *mandyas* of a prelate has wavy stripes upon it, while that of an archmandrite is plain.

man-eater (man'ē-ter), *n* 1 A cannibal—2 In India a tiger that has acquired a taste for human flesh, a tiger supposed or known to have a special propensity for killing and eating human beings. The name is sometimes extended to the lion and the hyena, on the same supposition.

The regular *man-eater* is generally an old tiger whose vigour is passed and whose teeth are worn and defective. It takes up its abode in the neighbourhood of a village, the population of which it finds an easier prey than the larger or wilder animals. W. H. Flower, Encyc. Brit., XIII 360

3 One of several kinds of large sharks supposed to be specially formidable to man, specifically, *Carcharodon carcharias*, a very large shark of the family *Lamnida*. This shark has straight narrow triangular teeth very slightly serrated or crenulated in both jaws. The body is stout and fusiform, with a pointed snout, there are two dorsal fins, one large, between the pectorals and the ventrals, the other small and posterior to the anal fin like the second dorsal. The caudal fin is crescentiform, and there are five branchial apertures, all in front of the pectorals. It has been found 40 feet long, though it averages so much less that 18 feet is a good size. It is a shark of the high seas found in nearly all tropical waters frequently pushing a considerable distance both northward and southward. Teeth much like those of the living species have been found in the Pliocene and Miocene deposits as well as in the core of the Pacific ocean indicating individuals that must have been about 50 feet long.

maneh (man'ē), *n* [Heb.] A Babylonian and Hebrew weight. See *manet*.

maneless (män'les), *a* [*< man* + -less] Having no mane as the *maneless* lion of Caucasia, a recognized variety of *Leleo*.

man-engine (man'en-jin), *n* A form of elevator or power-lifter used in some deep mines for raising and lowering men. In its usual form it is essentially a vertical rod extending from the surface to the bottom of the mine and reciprocated upward and downward, like a pump-rod by means of a steam engine or water wheel. The length of stroke commonly adopted is 12 feet, and at intervals equal to the stroke, platform frames are fastened to the rod with corresponding platforms in the shaft on either side of the rod, at points corresponding to the limits of the stroke both up and down. A man in descending steps on a platform on the rod just as the down stroke begins, and steps off on the platform in the shaft which he reaches at the end of the stroke, repeating the operation until he attains his destination. A man in ascending steps on a platform on the rod as the upward stroke begins and leaves it at the end of the stroke. Ascent and descent may proceed simultaneously without

interruption, the fixed platforms on one side of the shaft being reserved for men ascending, and those on the other side for men descending, each man stepping on his proper platform on the reciprocating rod as it is vacated, at the moment of rest between the strokes, by the man who is traveling in the opposite direction. This is the form of man engine used in Cornwall. That employed in the Harz mines (where the method originated) is the "double rod-engine," with two rods moving up and down alternately in opposite directions. This contrivance corresponds to a ladder with movable steps, the minor having nothing to do but to move slightly sideways in order to place himself on the step which is about to go up or down, according as he wishes to ascend or descend. In the United States cages, and in some mines man cars, are used instead of man engines. See *man car*.

manent (mā'nent) [*L*, 3d pers pl pres ind of *manere*, remain] They remain (on the stage) a stage direction. Compare *manet*.

maner², *n* Same as *manner*.

maneria (ma-nē'ri-ā), *n* [*ML* see *manner*¹] In *Griqorian music*, a mixed mode—that is, one that includes the compass both of an authentic and of its plagal mode. Polyphonic music for unequal voices is necessarily thus written. See *mode*¹, 7.

manerial (ma-nē'ri-al), *a* An obsolete variant of *manorial*.

manerly, *adv* An obsolete form of *mannerly*.

manes (mā'nēz), *n* pl [*L*, prob < *OL* *manis*, *manus*, good] 1 In *Rom. antiq.*, the spirits of the dead considered as tutelary divinities of their families, the deified shades of the dead, according to the belief that the soul continued to exist and to have relations with earth after the body had perished. Three times a year a pit called the *manus* was officially opened in the comitum of the Roman Forum, to permit the manes to come forth. The manes were also honored at certain festivals, as the *Parentalia* and *Carmentalia*, oblations were made to them, and the flame maintained on the altar of the household was a homage to them. [In this sense often written with a capital.]

The most special representatives of ancestor worship in Europe were perhaps the ancient Romans, whose word *manes* has become the recognized name for ancestral deities in modern civilized language; they embodied them as images, set them up as household patrons, gratified them with offerings and solemn homage, and, counting them as or among the infernal gods, inscribed on tombs D M, 'Dis Manibus'.

manful (man'fūl), *a* [*< ME* *manful*, < *man* + *-ful*] Having or expressing the spirit of a man, manifesting the higher qualities of manhood, courageous, noble, high-minded.

Ne grete empulses for to take on honde,
Shedynge of blode, ne *manful* hardinesse
Lydgate, *Complaint of the Black Knight*.

Nor know I whether I be very base
Or very *manful*, whether very wise
Or very foolish. Tennyson, *Geraint*

= *Syn.* *Manly*, etc. (see *masculine*), stout, strong, vigorous, undaunted, intrepid.

manfully (man'fūl-i), *adv*. In a manful manner, boldly, courageously.

manfulness (man'fūl-nes), *n* The quality of being manful, boldness, nobleness.

man-fungus (man'fung'gus), *n* A plant of the genus *Geaster*.

mang¹ (mang), *n* A dialectal variant of *mong*¹.

mang² (mang), *prep* A dialectal (Scotch) form of *mong*¹, among.

Syne bad him alip frae 'mang the folk,

And try't that night. Burns, *Halloween*

manga (mang'gā), *n*. [*ML*] *Eccles*, a case or cover, especially, the case for a processional or

other cross when not in use, often of rich stuff or embroidered.

mangabey (mang'ga-bā), *n* [A geographical name in Madagascar, by Buffon applied erroneously to a kind of monkey not found there.] A monkey of the genus *Cercopithecus*, of which there are several species, inhabiting Africa. They are of moderate size and slender form, have long limbs and tail, and are extremely agile. The face is more produced than in the species of *Cercopithecus* (from which *Cercopithecus* is detached), the eyebrows are prominent, and the eyelids are white. The general color is dark or blackish. The sooty mangabey is *C. fuliginosus*, the white-eyed mangabey is *C. ethiops*, in which the crown is also white. *C. collaris* has a white collar. In *C. albigena* the crown is crested. Also written *mangaby*.

mangal, **mankal** (mang'gal, -kal), *n* [*Turk* *mankāl*, *manghāl*] A brazier for a charcoal fire used in Turkey and throughout the Levant, usually of sheet-copper or sheet-brass worked into shape by the hammer, and frequently ornamented with designs in repoussé work.

manganapatite (mang-ga-nap'a-tit), *n* [*< mang-an(ese) + apatite*] A variety of apatite, unusual in containing manganese. A dark bluish-green kind from Branchville in Connecticut afforded 10½ per cent of manganese protoxide.

manganate (mang'ga-nāt), *n* [*< mang-an(ese) + -ate*] A compound of manganic acid with a base. Also *manganate*.

manganocolumbite (mang'gan-kō-lum'bīt), *n* [*< mang-an(ese) + columbite*] A variety of columbite in which the iron is largely replaced by manganese.

manganen (mang'gan-i-zn), *n* [*Irreg* < *mangan(ese) + Eisen* = *E iron*.] Ferromanganese, a combination of the metals iron and manganese containing a large percentage (from 50 to 85 per cent) of the latter. It is manufactured for use in the Bessemer process, and is an important adjunct to that operation. The object of the addition of the manganese at the termination of the "blow" is the removal of the oxygen in the iron, without at the same time adding carbon and silicon. This vitally important improvement of the Bessemer process is due to the Scotch metallurgist R F Mushet. See *steel* and *spiegel*.

manganesite (mang-ga-nē'sīt), *n* [*< manganese + -ite*] Same as *manganate*.

manganese (mang-ga-nēs' or -nēz'), *n*. [= *F* *manganèse* (> *Sp* *Pg* *manganesa* = *It* *manganesa*), < *NL* *manganesium*, an arbitrarily altered form of *magnum*, a name first given to this metal, but now used for a different metal. See *magnum*.] Chemical symbol, Mn, atomic weight, 55.02. A metal having a remarkable affinity for, and in some respects a close resemblance to, iron, of which it is an extremely frequent associate.

It differs from iron however, in that it is not used at all by itself in the arts, although of great interest and importance as connected with the manufacture of iron, and as modifying by its presence in small quantity the character of the product obtained. The use of the black oxide of manganese for removing the coloring matters from glass was known to the ancients, and is mentioned by Pliny, but the nature of the material thus used was not understood until quite modern times. This ignorance was shown in the confusion of the oxide of manganese with the magnetic oxide of iron, the lodestone (Latin *magnes* and *magnesia lapide*), and the former was called *magnesia* by chemists in the middle ages apparently in conformity with Pliny's idea of a dual (masculine and feminine) nature in some metals, manganese not having the attractive power of the magnet, and being on that account considered feminine. Other variants (in the fifteenth and sixteenth centuries) of the name of the ore used by glass makers were *magnesia*, *magnesium* and *manganen*. After what we now call *magnesia* had received the name of *magnesia alba*, apparently from the idea that this substance was in some way related to the oxide of manganese the latter began to be called *magnesia nigra*. From the middle of the eighteenth century the combinations of manganese were studied by various chemists, and finally, in 1774, the metal manganese was isolated by Davy, but for years there was much confusion in regard to its specific name, and it was not until after the beginning of the present century that the name *manganese* (mangan in German) began to be generally adopted. The Latin termination in -um (*manganium*) is rarely used in modern technical works. This metal has never been found native. As eliminated from its ores by chemical processes, it is grayish white in color, resembling cast iron but varying considerably in hardness and luster according to the nature of the methods by which it was obtained. It is very hard and brittle and has a specific gravity of about 8. It oxidizes rapidly on exposure to the air. Manganese resembles iron in that its ores are widely diffused and differs from that metal remarkably in the fact that, on the whole, its ores are only rarely found in considerable quantity in any one locality, while those of iron exist in abundance in many regions. The important ores of manganese are all oxides, and of these the peroxide (pyrolusite), called in commerce the *black oxide of manganese*, or simply *manganese*, is the most valuable and important. Other mangiferous minerals (all oxides) are braunite, hausmannite, psilomelane, and various earthy mixtures called *bog-manganese*, *wad*, *cuprous manganese*, etc. Practically, the ore called *manganese* in commerce is a mixture of various oxides, different samples differing greatly in value, which value has to be determined by chemical analysis. The ores and salts of manganese are of very considerable importance in chemical manufactures, both as bleaching and oxidizing reagents. The na-

ture and importance of this metal in the manufacture of iron and steel will be found indicated under *steel* and *spiegel*. —*Earthy manganese*. See *wad*. —*Gray manganese ore*. Same as *manganite*. —*Manganese bronze*, an alloy said to be composed of ordinary bronze with the addition of manganese. It has the color of gun-metal, and its fracture resembles that of fine grained steel. It is said to equal or excel in tensile bar iron of medium quality. It has been manufactured in England, but has not come into general use. —*Manganese brown, green, violet*, etc. See *brown*, etc. —*Manganese copper*. Same as *manganese bronze*. —*Manganese epidote*, *pidmontite*. See *epidote* and *pidmontite*. —*Manganese garnet*, *spessartite*. See *garnet*. —*Manganese spar*, *rhodonite*. —*Red manganese*, a mineral usually of a rose-red color, rhodochrosite. —*Red oxide of manganese*, Mn_2O_3 , a compound of manganese and oxygen which may be formed by exposing the peroxide or sesquioxide to a white heat. It occurs native as hausmannite. —*White manganese*, an ore of manganese, manganese carbonate.

manganese-glaze (mang-ga-nēs'glāz), *n*. A dark-gray or jet-black glaze, the color of which is given by manganese.

manganesian (mang-ga-nēs'i-an), *a*. [*< manganese + -ian*.] Pertaining to manganese; consisting of manganese, containing manganese, or characterized by its presence.

manganic (mang-ga-nē'sik), *a* [*< manganese + -ic*] Same as *manganic*.

manganesium (mang-ga-nēs'si-um), *n*. [*NL* see *manganese*] Same as *manganese*. [Rare.]

manganetic (mang-ga-net'ik), *a* [*< mangan(ese) + -etic*, as in *magnetic*] Same as *manganiferous*.

manganhedenbergite (mang-gan-hed'en-ber-git), *n*. [*< mangan(ese) + hedenbergite*] A variety of hedenbergite containing a relatively large amount of manganese, found in Sweden.

manganic (mang-gan'ik), *a* [*< mangan(ese) + -ic*] Containing manganese in chemistry, specifically applied to compounds in which each manganese atom is regarded as quadrivalent. Also *manganic*. —*Manganic acid*, H_2MnO_4 , an acid which is not known in the free state. Manganates of the alkalis are formed when manganese dioxide is heated with an alkali carbonate or nitrate. They have a green color, and readily decompose, forming permanganate and manganese dioxide. The crude alkali manganate was formerly called *chamelleum mineral* from the property which its solution has of passing rapidly through several shades of color, occasioned by changes in its state of oxidation. Manganic acid, Mn_2O_3 , or manganese sesquioxide, is the mineral braunite.

manganiferous (mang-ga-nif'e-rus), *a* [*< NL* *manganium* + *L* *ferre* = *E* *bear*¹] Containing or carrying manganese as, a *manganiferous garnet*. Also *manganetic*.

These higher *manganiferous* iron ores show little or no magnetic action. C R Alder Wright, *Encyc Brit*, XIII 860.

manganite (mang'ga-nīt), *n* [*< mangan(ese) + -ite*²] A hydrated oxide of manganese occurring in orthorhombic crystals of a steel-gray or iron-black color and brilliant luster, also in masses having a columnar structure. It is often altered, by loss of water, to pyrolusite. Also called *gray manganese ore*.

manganium (mang-gā'nī-um), *n* [*NL*, short for *manganesium*] Same as *manganese*.

manganocalcite (mang'ga-nō-kal'sit), *n*. [*< mangan(ese) + calcite*] A variety of calcite containing manganese carbonate.

manganomagnetite (mang'ga-nō-mag'ne-tit), *n* [*< mangan(ese) + magnetite*] A variety of magnetite containing considerable manganese.

manganophyllite (mang'ga-nō-flīt), *n* [*< mangan(ese) + Gr* *φύλλον*, leaf, + *-ite*²] A mangiferous mica occurring in thin reddish scales at several localities in Sweden.

manganosiderite (mang'ga-nō-sid'e-rit), *n*. [*< mangan(ese) + siderite*] A carbonate of manganese and iron, intermediate between rhodochrosite and siderite.

manganosite (mang-ga-nō'sit), *n* [*< mangan(ese) + -ose* (f) + *-ite*².] Manganese protoxide, a mineral occurring in regular octahedrons of an emerald-green color, found at several localities in Sweden.

manganostibite (mang'ga-nō-stib'it), *n* [*< mangan(ese) + stib(um) + -ite*².] An antimoniate of manganese, occurring in black embedded grains at Nordmark in Sweden.

manganotantalite (mang'ga-nō-tan'ta-lit), *n*. [*< mangan(ese) + tantalite*.] A variety of tantalite in which the iron is largely replaced by manganese. The manganotantalite first known was from the Ural, and had the crystalline form of ordinary columbite. A massive manganian tantalite from Sweden is distinguished as *manganotantalite*.

manganous (mang'ga-nus), *a*. [*< mangan(ese) + -ous*] Containing manganese: in chemistry, specifically applied to compounds in which each manganese atom is regarded as having a

maximum quantivalence of two. Compare *mangame*.

By exposing the manganous oxide to a strong current of air, it takes up another atom of oxygen.

Mangifera (man-jif'e-rä), *n*. [NL. (Linnæus), < *mango* + L. *ferre* = E. *bear¹*.] A genus of dicotyledonous polypetalous plants of the natural order *Anacardiaceae*, the cashew family, and type of the tribe *Mangifereae*, having the ovule ascending above the base of the cell, and the sepals and petals not increasing after the flower has expanded. They are tropical trees with simple,

entire, coriaceous leaves, and polygamodioscous flowers, which are small, pinkish or yellowish, and grow in much branched panicles. The fruit is a fleshy drupe, fibrous within, and usually with more or less of a turpentine flavor. There are about 80 species, natives of tropical Asia.

Flowering branch of Mango-tree (*Mangifera indica*). a, a flower, b part of the inflorescence, c the pistil d the fruit, e the seed.

The mango, *M. indica*, grows abundantly in India, and is cultivated in many other tropical countries for its edible fruits, which are very highly esteemed. There are great many varieties, differing in the flavor, size, and shape of the fruit. The unripe fruits are much used in India in conserves and pickles, in which latter state they are frequently exported. The ripe fruits also, are much eaten. Various parts of the tree are used in medicine.

Mangifereae (man-jif'e-rä), *n. pl.* [NL. (Engler 1883), < *Mangifera* + *-ae*.] A tribe of plants of the natural order *Anacardiaceae*, the cashew family, embracing 7 genera, of which *Mangifera* is the type, and about 160 species, all natives of the tropics. The tribe is characterized by simple leaves, and by the ovule being suspended from a funiculus that rises from the base of the cell.

Mangilia (man-jil'i-a), *n*. [NL. (Lobén, 1846), orig. *Mangilia* (Risso, 1826), also *Mangilia* (Andouin, 1827), from the name of *Manqu*, an Italian naturalist.] The type of genus of *Mangilia*.

Mangilius (man-jil-i'us), *n. pl.* [NL. < *Mangilia* + *-ia*.] A subfamily of pleurometoid gastropods, typified by the genus *Mangilia*, and characterized by absence of an operculum.

mangily¹ (mäng'jil-i), *adv.* In a mangy or foul manner, meanly. [Rare.]

Oh, this sounds mangily,
Poorly, and so urvily in a soldier's mouth

Cf. *mangonel*, *mangonize*.] A machine for smoothing fabrics or household articles of linen or cotton, as sheets, table-cloths, napkins, and towels. As formerly made, it consisted of an oblong rectangular wooden chest which rested upon two cylinders. The chest was loaded with stones to make it press with sufficient force upon the cylinders, and was moved backward and forward by means of a wheel and pinion, the rollers being thus made to pass over and thoroughly press the articles spread on a polished table underneath. Mangles of this construction have, however, been generally superseded by mangles which act in the manner of a calender or a clothes wringer, the cloth to be smoothed being passed between one or more pairs of rollers.

mangrove (mang'grōv), *n* [Formerly also *mangroves* (1670), appear an altered form, simulating *E. grove*, of *mango*, or some similar form (cf. F. *manglier*, Sp. *mangle*, NL *mangle*, mangrove) of Malay *munggi-munggi*, mangrove.]

1 A tree of the genus *Rhizophora*, chiefly *R. mucronata* (*R. Mangle*), the common mangrove, abounding on tropical shores in both hemispheres. It is a low tree of most singular habit, remarkable for a copious development of adventitious roots, which arch out from the lower part of the trunk, and at length descend from the branches, it is peculiar also in that its seed germinates in the fruit, sending down its radicle into the mud, sometimes a distance of several feet, before detaching from the parent. By these means the mangrove spreads thickly over the tidal mud, forming impenetrable and highly malarial bogs hundreds of miles in length. The wood is valuable for fuel, for piles, etc., and is susceptible of a beautiful polish. The astringent bark is useful in medicine and for tanning. The fruit is of a dry and coriaceous texture. See cut in preceding column.

2 Another plant of similar habit, especially a plant of the genus *Sonneratia*. They are lit toral trees, widely diffused in the tropics, throwing out a tangled mass of arching roots above ground, and sending up abundant asparagus-like shoots from the underground roots. The seed also germinates as it ripens. *A. officinalis* (including *A. tomentosa*), called *white mangrove*, extends to Australia and New Zealand, the manawa of the Maoris, mistakenly reported to yield an aromatic gum. *A. nutans* of tropical America and Africa is the black or olive mangrove. See *blackwood*, § 3.

3 In *cool*, the mango-lish. — **Red mangrove**, a Guiana form or name of the common mangrove. **White mangrove**. See def. 2, also, the white buttonwood (which see). — **Zaragoza mangrove**, *Conocarpus erecta*. See *buttonwood*, 1.

mangrove-bark (mang'grōv-bark), *n*. The bark of the common mangrove, of *Amorcania officinalis*, and of several similar East Indian trees, valuable for tanning. Also *mangle-bark*.

mangrove-cuckoo (mang'grōv-kū'kō), *n*. An American tree-cuckoo, *Coccyzus versicolor* (C. minor), found in Florida and some of the West Indian islands, so called from frequenting mangroves. It resembles the common C. americanus and is of about the same size, but the under parts are pale orange-brown instead of white, and the dark ulars are dusky. See *Coccyzus*.

mangrove-hen (mang'grōv-hen), *n*. The common salt-water marsh-hen or clapper-tail, *Rallus longirostris* or *R. crepitans*. [West Indies.]

mangrove-snapper (mang'grōv-snap'p), *n*. The bastard snapper, *Lutjanus (Rhomboplites) amurensis*, a spurious fish of the West Indies and northward to South Carolina. It is about a foot long, and of a vermilion or rusty hue in different parts, with irregular yellow spots on the sides. This fish technically differs from other snappers of the same genus in having a diamond-shaped patch of vomaline teeth and feeble canines. See *snapper*.

Ser T. More, *Comfort against tribulation*.

2 Manhood, virility.

Thou mayst, syn thou hast wysdom and manhed
Assemblen all the folk of our kynred.
Chaucer, *Knight's Tale*, l. 427.

Sone, y schal thee schewe — now take hede —
And of such manners thee declare
Hi which thou schalt come to manhed,
To world worship, and to weelfare.
Babes Book (E. E. T. S.), p. 84.

manheim (man'him), *n*. A brass alloy resembling gold. See *Manheim gold*, under *gold*.

manhole (man'hōl), *n*. 1 A hole through which a man may enter a sewer, drain, cess-pool, or the like, for cleaning or repairing, in steam-boilers, hot-water tanks, keels, etc., a hole formed in the shell, through which a man may enter to the interior for cleaning inspection, or repairs. In the latter cases the hole is provided with a cover by which it may be stopped steam-tight or water-tight, the cover being usually fitted to the inside, and the hole made elliptical so that the cover can be easily inserted, the pressure of the steam or water assists in holding the cover to its seat.

2 In *coal-mining* (a) An excavation or refuge-hole made in the side of an underground engine-plane or horse-road. [Eng.] (b) A small and generally short passage used for the ingress and egress of the miners. [Pennsylvania anthracite region.] (c) A niche cut in the side of a railroad-tunnel as a refuge-hole.

manhood (man'hud), *n*. [*< ME manhode* (also *manhede* see *manhead*), < man + hood.] 1 The state of being man, or of belonging to the human race, as distinguished from higher or lower orders of existence.

Equal to the Father as touching his godhead and inferior to the Father as touching his manhood.
Athanasian Creed, [English] Book of Common Prayer.
Therefore thy humiliation shall exult
With thee thy manhood also to this throne.
Milton, P. I., iii, 314.

2 The state of being a man, as distinguished from a woman or a boy, virility.

To some shade,
And fit you to your manhood.
Shak, *ymbeline*, iii, 4, 195.

His starry helm unbuckled show'd him prime
In manhood where youth ended.
Milton, P. I., xi, 246.

3 The quality of being a man or manly, manliness, possession of masculine qualities, as courage, fortitude, resolution, honor, etc.

I am ashamed
That thou hast power to shake my manhood thus.
Shak, *1 ear*, i, 3, 319.

Peace hath higher test of manhood

In a mania in this strict sense there may be delusions, but they fall of the systematized character of those of paranoia. Delusions and hallucinations may also be present. The attack may last for days, or months, or years. The prognosis is not very unfavorable. The cases issue in recovery, in death by exhaustion and intercurrent disease, and a considerable proportion in permanent imbecility.

2 An eager, uncontrolled, or uncontrollable desire, as, a *mania* for drink, in colloquial use, a "rage" or craze for something, as, a *mania* for first editions.

In the end of the 12th or beginning of the 13th century, the *mania* for painted glass had seized on the French architects, and all architectural propriety was sacrificed to this mode of decoration. *J. Ferguson*, *Hist. Arch.*, i, 520.

Mania a potu, madness from drinking, delirium tremens. — **Mania gravis**. Same as *Bell's disease* (which see, under *disease*). — **Mania transitoria**, insanity coming on suddenly in individuals previously sane, and not the delirium of an epileptic attack, which it resembles. — **Syn.** 1. *Insanity, Lunacy*, etc. See *insanity*.

As dreadful as the Manichean god,
Adored through fear, strong only to destroy
Cowper, *Task*, v 444

II. *n* One of a religious body, adherents of Mani, Manes, or Manichæus, a native of Persia or some neighboring country, in the third century. Its doctrines and features were derived from Gnostic, Buddhist, Zoroastrian, and various other sources. These it attempted to combine with Christianity, and it is generally classed among Gnostic sects. Its theology was dualistic, representing the conflict between light and darkness, and including belief in the inherent evil of matter. Its morality was professedly ascetic, but profligacy of life and cruel or immoral ceremonial were generally attributed to it in both its earlier and its later forms. It had an organized priesthood, and recognized a distinction between its esoteric class (the "elect" or "perfect") and the "hearers." It originated in Persia, but soon extended into the Roman empire, and existed as late as the seventh century. The Paulicians, Albigenses, Catharists, etc., developed it into new forms, retaining many of its features, and hence were styled "New Manicheans." The title *Manichean* or *New Manichean*, was an epithet used opprobriously in the controversies of the middle ages

Manidae (man'i-de), *n* pl [*NL.*, *< Manis* + *-idae*] A family of squamate edentates, the sole representative of the suborder *Squamata* of the order *Bruta*, peculiar to tropical Asia and Africa, the pangolins or scaly ant-eaters. The form is elongate, without apparent distinction of neck and tail. The whole aspect resembles that of a lizard, an appearance heightened by the remarkable large, thin, horny overlapping scales which cover the upper parts in continuous series. The under parts are hairy, feet are wanting, the hind feet are plantigrade and five-toed and the fore feet are also pentadactyl, but the digits are so shaped that the animal walks on its knuckles. The placenta is diffuse and non deciduate. The family includes 6 or 8 species referable to 3 genera, *Manis*, *Pholidota* and *Smutsia*. See *ant* under *pangolin*. The first five words agree in representing the object as though viewed with the eye. What is *clear* can be seen without doubt, what is *plain* can be seen by any one at the first glance, without search or study. *Freely* suggests something more of a mental process, but no difficulty in seeing that the thing is true. *Manifest* is a degree stronger than *evident*, the mind getting the truth as by an intuition. *Obvious* by derivation applies to that which lies so directly in our way that we cannot help coming upon it and seeing it, that which is *obvious* needs no pointing out or explaining. We speak of a *clear* case of self-deception, a duty that is *plain*, an *evident* mistake, a *manifest* misunderstanding, an *obvious* inference, not needing to be actually put into words

Manihot (man'i-hot), *n*. [NL. (Adanson, 1763).] 1 A genus of euphorbiaceous plants of the tribe *Crotonæ* and the subtribe *Adrianæ*. The calyx of the staminate flowers has imbricated lobes and is often colored, the stamens are 10 in number and have anthers attached at the back, and the styles are spreading. They are tall herbs or shrubs, with alternate leaves which are undivided or often palmately 4 to 7 lobed or parted, and monoclous apetalous flowers, which are quite large and grow in terminal or axillary racemes. There are about 80 species, all natives of tropical and subtropical America, several of them, however, are largely cultivated elsewhere. The genus is of great importance for the food products derived from the roots of several species, especially *M. utilis*, the bitter cassava, and *M. 4 In the *Western Church*, one of the eucharistic vestments, consisting of a short, narrow strip, similar in material, width, and color to the stole. It is marked with a cross and generally embroidered and fringed. The maniple is worn by prelates, priests, deacons, and subdeacons, hanging from the left sleeve of the alb, fastened near the wrist, or attached by strings, pins, or a button. It is assumed by the celebrant after the alb and girdle, and before the stole. A bishop assumes it at the indulgentia. In Anglican Churches maniples are worn, as in the medieval Church, three or four feet in length, in the Roman Catholic Church they are now much shorter. The maniple seems to have first come into use in the eighth century, and was originally a piece of white linen used as a handkerchief. Till the twelfth century and later it continued to be held in the hand. There is no corresponding vestment in the Eastern Church, though some writers have confounded the *epimanikion* with it. Other names formerly given to the maniple were *fanon* or *phanon*, *manile*, *manutergium*, *manipula* or *mapa*, and *mandarum*.

The name is otherwise referred to Heb. *man*, a gift, Ar *mann*, favor.] 1 The food by which the children of Israel were sustained in the wilderness (Ex xvi 14-30, Num xi 6, 7). The circumstances attending the gift of manna show that it was believed to be miraculous. Modern commentators differ in opinion as to its probable nature: by some it is identified with an exudation of the tamarisk tree, and by others with a lichen which torn from its home and carried vast distances by the wind, still falls and is gathered for food in the Sinai peninsula (see *manna lichen*), and by others it is regarded as a special and miraculous creation

4 In *phar*, a sweet concrete juice obtained by incisions made in the stem of *Fraxinus Ornus*, a native of Sicily, Calabria, and other parts of the south of Europe, and from other species of ash. It is either naturally concreted or excreted and purified by art. At the present day the manna of commerce is collected exclusively in Sicily where the manna ash is cultivated for the purpose in regular plantations. The best manna is in oblong pieces or flakes of a whitish or pale yellow color, light friable, and somewhat transparent. It has a slight peculiar odor and a sweetish taste mixed with a slight degree of bitterness, and is employed as a gentle laxative for children or persons of weak habit. It is, however, generally used as an adjunct to other more active medicines. It consists principally of a crystallizable sweet substance named *saccharine* and certain other substances in smaller quantity. Sweetish excretions exuded by some other plants growing in warm and dry climates, as the *Eucalyptus viminalis*, the manna gumtree of Australia, and the *Tamarix Gallica* var. *mannifera*, of Arabia and Syria, are also considered to be kinds of manna. Small quantities of manna known as *Iranian manna*, are obtained from the common larch, *Larix Europaea*—*Jews'* or *Hebrew manna*, *manna of Sinai*. 2. In England, generally, a landed estate, especially one the tenure of which vests the proprietor with some particular rights of lordship; specifically, in *old law*, a lordship or barony held by a lord and subject to the jurisdiction of a court-baron held by him; in more ancient usage, an estate of a lord or thane with a village community, generally in serfdom, upon it. See *villainage* and *yard-land*.

In the ill yer of his reign in Septembre was bore to the kynge a sone cleped Richard, att Oxenford in his manor, wher is now the white frewe.

Job of Gloucester, p. 484, note

These manors (those with which England was covered about the time of the Domesday Survey) were in fact in their simplest form estates of manorial lords, each with its village community in villenage upon it. The land of the lord's demesne—the home farm belonging to the manor house—was cultivated directly by the services of the villata, i. e. of the village community or tenants in villenage. The land of this village community, i. e. the land in villenage, lay round the village in open fields. In the villages were the messuages or homesteads of the tenants in villenage, and their holdings were composed of bundles of scattered strips in the open fields, with rights of pasture over the latter for their cattle after the crops were gathered, as well as on the green (commons of the manor or township).

Schöbner, Eng. VII. Community, p. 76

On close inspection, all feudal society is seen to be a reproduction of a single typical form. This unit consists of a group of men settled on a definite space of land, and forming what we Englishmen call a *Manor*, and what in France was called a *fief*.

II n 1 A book, paper, or instrument written by hand with ink or other pigment, or with a pencil or the like, a writing of any kind, as distinguished from anything that is printed. Especially—2 Such a book, paper, or instrument so written before the introduction and general adoption of printing in the fifteenth century, or in a style in vogue before the invention of printing. The oldest surviving manuscripts are Egyptian, of which some are at least 3,500 years old. Ancient manuscripts are written on papyrus, parchment, or vellum, and are usually in the form of a long band which was rolled for convenience about a rod. Greek manuscripts are in uncial, cursive, or minuscule characters. The uncials are the oldest form, and resemble modern capitals. The cursive characters are derived from the uncials, though they came to differ much from these in shape and are used in manuscripts from the second century before Christ. The minuscule writing is that practiced with few or no exceptions since the ninth century. The forms of the earliest printed Greek closely resemble the Latin manuscripts in capital, uncial, cursive, or minuscule characters. The capitals are the earliest form, but their use was not entirely discontinued until the Carolingian epoch. The uncials of which the letters are characterized by their round shape, were developed very early, attained their highest perfection in the fourth century, and continued in use until the ninth century. The cursive writing was developed from the uncial. It appears in the graffiti found scratched on the walls of Pompeii, Rome, etc., and is the parent of many old systems of writing, as the Lombard and Merovingian. The minuscule style was developed in the eighth century, in the monastery of St Martin at Tours and reached its perfection in the twelfth century. In this style are written the splendid manuscripts of the middle ages, produced for the most part in monasteries and enriched with superbly illuminated initial letters and elaborately painted miniatures. Upon the introduction of printing, the minuscule writing supplied models to the earliest type-makers. *Palmprint manuscripts* are manuscripts written in antiquity or in the early middle ages upon papyrus or vellum from which earlier writing had been erased. Modern science has been successful in deciphering the imperfectly effaced characters of many such manuscripts and has recovered in this way some of our most valuable remnants of classic literature. The three most important Biblical manuscripts extant are the Alexandrian (codex, the Vatican codex, and the Sinaitic codex. See *codex*). These are of course all uncials. See *capital*, *cursive*, *majorcule*, *minuscule*, *uncial*. Often abbreviated. *MS*, plural *MSs*

result of careful topographical surveys, the relief of the surface is generally indicated with more or less accuracy. This is done either by contour lines or hachures, or by simple shading By the latter method, as ordinarily practiced, the indications of the relief of the surface are but rough in character. With sufficiently accurate data and a careful and artistic treatment, a close approach may, however, in this way be made to the effect obtained by photographing a model of the surface in question in an oblique light. From such a photograph the eye gets at once a very clear idea of the character of the surface.

Maranta (ma-ran'tā), *n*. [NL (Plummer, 1703), named after B. Maranta, a Venetian physician and botanist of the 16th century] 1 A genus of monocotyledonous plants of the natural order *Zingiberaceae*, type of the tribe *Marantae*. It is distinguished by the one celled ovary the slender branched inflorescence, and the narrow involute bracts, closely surrounding the branches. They are herbaceous plants with fleshy tubers, sheathing leaves, and a few flowered inflorescence, the flowers having a cylindrical corolla-tube, and a petaloid filament bearing a one celled anther. There are about 15 species indigenous to tropical America, but several species are widely cultivated for their fleshy tubers. The pure kind of starch known as *arrow-root* is obtained from the tubers of *M. arundinacea* and of several other species by maceration, washing, and drying (See *arrowroot*). Several species have highly ornamental foliage, as *M. (Calathea) zebrina*, the zebra plant, whose leaves are 2 feet long and 6 inches wide of a deep rich green, purple shaded and with a velvety appearance. See also *starch fiber*

Marattia (ma-rat'ī-ā), *n* [NL (Swartz, 1806), named after J. F. Maratti of Vallombrosa in Tuscany, a writer on ferns] A genus of ferns, typical of the order *Marattiaceae*. They are coarse habited plants, having large acylorhizomes and simple (two- or three-pinnate) fronds, with oblong pinnules, bearing the sori in lines near the margin. Many fossil ferns showing both fronds and fructification (closely resembling those of this genus occur, chiefly in Triassic (Rhotic) strata and were called *Marattiopsis* by Schimper, who united with that genus all the forms which had been called *Angiopteris* *dum*, since found very abundant in the Mesozoic beds of India, and quite recently in the Potomac formation of Virginia.

Marattiaceae (ma-rat'ī-ā'sē-ē), *n* pl [NL (Kaulfuss, 1824), < *Marattia* + *-aceae*] An order of eusporangiate ferns, typified by the genus *Marattia*. They are found in South America, the eastern Pacific Islands, South Africa, and southern Asia. They differ from the true ferns on the one hand by the absence of the jointed ring of the spore case, and from the *Ophioglossaceae* on the other by the circinate vernation. By some authors they are regarded as a distinct class, of equal rank with the true *Filices* and *Ophioglossaceae* (called *Danaeaceae* by Agardh).

Hence ult *marmer*, *marmoset*] *I. n* *1* Limestone in a more or less crystalline or crystalline-granular condition. Any limestone, however even if very compact or showing only traces of a crystalline structure, may be called *marble* if it is capable of taking a polish, or if it is suitable or desirable for ornamental and decorative purposes. The presence of magnesium carbonate associated with the calcium carbonate, forming dolomitic limestone or even pure dolomite does not in any way influence the nomenclature of the rock. Indeed such presence cannot usually be known except from chemical analysis. *Marble* is a material of great importance in architecture, not only for exterior use, but for interior decoration in large, costly monumental structures. Thirty-three varieties of ornamental stone are used in the interior of the Grand Opera House in Paris and a large proportion of these may be classed as marbles. The value and beauty of marble depend largely on its coloration. Perfectly pure carbonate of lime, dolomite limestone, and dolomite are all colorless, and white marbles — or at least such as are only slightly tinged with color — are very abundant. White marble such as is used for statuary (for which purpose it must be obtained in large blocks free from flaws or defects of any kind, and perfectly uniform in tint) is extremely rare. Among the finest statuary marbles are those used in the masterpieces of Greek sculpture of which that from the island of Paros is generally admitted to surpass all others, especially in the possession of a certain amount of translucence by which the artistic effect of the work is heightened. The Parian quarries seem however to have been practically exhausted. The Pentelican marble, obtained from quarries near Athens, stood next to the Parian in ancient times, and its quarries are still apparently inexhaustible. At the present time the artistic world is supplied with statuary marble from quarries in the Apennine mountains overlooking the Bay of Spezia, and in the vicinity of Carrara, Massa, and Sorrento. From this marble were carved the finest works of Michelangelo. These quarries, which have been extensively worked for 2,000 years, furnish in addition to the white, a large amount of variegated marble, especially of the variety known as *barba di*. The number and variety of colored and variegated marbles used for various artistic and architectural purposes is very great. In Italy black marble capable of taking a fine polish is rare — much more common are varieties irregularly shaded with gray, bluish gray, or dove-colored tints. Bright colors — red, yellow, green, and blue — are much rarer than the less brilliant shades, but they are seen in some marbles, and are occasionally so blended and intermingled as to produce extremely beautiful effects. These brilliant colorations are chiefly due to the presence of iron in various combinations — dark and grayish shades are generally caused by the presence of a greater or less amount of organic matter. In many varieties of marble the presence of organic remains (included in the rock adds greatly to its attractiveness. Joints and stems of encrustations as well as many other kinds of fossils, occur in this way, and by contrast of their color with that of the material in which they are included, as well as by the gracefulness of their forms, produce a very fine effect. Fragments of shells embedded in calcareous rocks sometimes exhibit a brilliant display of iridescent coloration, such marbles are known as *luna shells* or, sometimes, *fire marbles*. A beautiful effect is occasionally produced as the result of deposition of the calcareous material in stalagmitic form, so that when cut and polished the marble exhibits concentric zones of various tints, varieties having this structure are frequently called *onze marble*. The vicinity of the Mediterranean is the classic region of marbles. Italy, France, and Spain are rich in beautiful varieties, and these are seen in the greatest number and to the best advantage in the architectural works of ancient and modern Rome. For this reason many of the rarest and most attractive marbles are best known by Italian names, and these names are frequently applied to varieties occurring far away from the Mediterranean from either real or fancied similarity to the Italian marbles. Some of the best known and most highly prized classic variegated marbles are the following: *Africano* from the island of Chios, is a lunachelle, or shell marble, exhibiting a great variety and brilliancy of coloration, reddish and purplish tints predominating. *Barba di* is common in the Apennine quarries, of a grayish or bluish white color traversed by darker veins of the same *Broccat* and *broccatellone* are extremely variegated marbles, with numerous interlacing veins of yellow, violet, and crimson tints on a yellowish ground, marble bearing these designations has been and still is quarried in various places and especially near Tortosa in Spain. *Cypriano* is a marble with more or less of a concretionary structure, of many tints and much variety in their arrangement, with corresponding names, such as *capolino verde mandorlato* (having almond shaped patches of color), *rosso*, etc. A fine example of this marble may be seen in the columns of the Braccio Nuovo of the Vatican. *Pior di permo* is an exquisitely beautiful marble with a reddish and crimson shading on a white base called by the ancients *mermor Molossium*, because coming from the region inhabited by the Molossians, in what is now Albania, on the eastern coast of the Adriatic. *Giallo antico* or *Nubian marble* is an

extremely beautiful marble quarried in northern Africa, it was highly esteemed and extensively used by the Romans. The tints are variable, red and yellow predominating, the different varieties were designated by names indicating the prevailing tints. *Giallo di Siena* is a beautiful yellow marble of various depths of color, with darker veins, in which violet hues predominate, when these veins are very numerous the marble becomes a *broccat Pavonazzo* and *pavonazzo* are various red and purplish marbles and broccas, some of the latter being also true marbles, but having a more or less broccated character. The most beautiful pavonazzo is that called by the Romans *marmor Synadicon* or *Phrygian marble*, from the locality where it was obtained. It is characterized by a very irregular venation of dark-red with bluish and yellowish tints, ramifying through a translucent alabaster-like base, which is sometimes almost opaline in its play of colors. *Rosso antico* is a marble of very deep red color, sometimes of various shades, occasionally streaked or clouded with dark purple or whitish tints. The original locality of the classic *rosso antico* has not been discovered, but some modern red marbles closely resemble this variety. Some of the most highly prized French colored marbles bear names peculiar to France (See *griotte*, *portor*, *sarracén*). The Devonian and Carboniferous of England and Ireland furnish a considerable number of ornamental marbles. Devonshire and Derbyshire are the counties in which the best known English varieties are obtained. The finest Irish variegated marbles are quarried near Armagh, and at various localities in county Cork, also at Killarney and on the islands of the Kenmare river, and marble called *Sena* is obtained from several places in King's county and near Shannon Harbor in Galway. The most important quarries of white and grayish marble in the United States are those in the Lower Silurian of Vermont and western Massachusetts. There are very extensive marble works at Rutland in Vermont, at Lee in Massachusetts, and at many other points in the same geological formation. Some of the variegated marbles found on the islands and near the shores of Lake Champlain are very handsome, but they are not extensively worked. The most popular colored marble in the United States at the present time is the Tennessee, a light-grayish stone beautifully mottled with shades of pinkish red. This marble has been extensively employed in the capitals at Washington and Albany.

The most valuable object in this collection is the inscribed slab called the *Parian Chronicle*, from having been kept in the island of Paros. In its perfect state, the inscription contained a chronicle of the principal events in the history from the time of the mythical Cretan thearch, Diogenes (284 B.C.), but the part of it covering the last ninety years is now lost, and much of what remains is corroded and defaced. — *Elgin marbles*, a collection of ancient sculptures, for the most part of the school of Phidias and from the Parthenon at Athens, taken to England during the first years of the nineteenth century by the Earl of Elgin, and now preserved in the British Museum.

Specimen Slab of the Elgin Marbles — A central piece of the Parthenon frieze with figures of Athena and Hephaestus.

These sculptures are the finest surviving work of ancient artists, and comprise the greatest part now in existence of the sculptured decoration of the Parthenon, including the splendid fragments of the pediment statues, a great number of metopes, and an extended series of the blocks carved in low relief of the cilla frieze. The removal of the marbles, many of which were torn violently from their original positions upon the Parthenon, to the further damage of that monument, was in itself an act of vandalism, but their transportation to England at a time when Greece was accessible with difficulty opened the

eyes of the world to the preeminence of Greek work. It was one of the first steps toward securing an accurate knowledge of Hellenic ideals, and has thus influenced contemporary civilisation. — **Enochian marble**. marble-worker (már'bl-wér'kér), *n* One who works in marble, a workman who cuts, hews, or polishes marble, a **marbler** — **Marble-workers' file**. See *file*.

marbling (már'bling), *n* [Verbal *n* of *marble, v*] 1 The art or process of variegating in color, in imitation of marble, or with veins and cloudings of any sort — 2 Any marking resembling that of veined or variegated marble, hence, any mottling, veining, or clouding of a surface as, the **marbling** of flesh-meat caused by alternations of fat and lean — 3 The art or practice of staining paper or the end edges of a book with variegated colors, usually in some conventional imitation of marble. It is done in a trough of water covered by a layer of gum tragacanth mixed with a little ox gall. The fluid colors are sprinkled or spattered over this layer with a brush, either in the arrangement intended for use or in a manner which will admit of producing the desired figuration by drawing a brass comb over the surface. The dampened paper held by the ends is lightly passed in a curve over this surface, taking up the colors and finished by sizing and burnishing or calendering.

marbly (már'blí), *a* [*< marble + -y*] Resembling marble in structure or appearance.

Great smooth **marbly** limbs

marcasite (már'ka-sít), *n* [Formerly also *marcasite*, *marchaisite*, *marchesite*, *< F marcasita* = Sp. *marquesita* = It. *marcasita*, *marchesita*, with term *-ite*, said to be of An. origin (?)] 1 As used by the early mineralogists, the crystallized forms of iron pyrites, including more particularly the isometric species now called *pyrite*. This mineral was frequently used for personal decoration in the eighteenth century. It takes a good polish, and is cut in facets like rose diamonds. It was made into pins, watch cases, shoe and knee buckles and other ornaments.

Also great pieces of chrysolite and thymite gold in mine, and other metals and minerals. *Fryden, Min., June 21 1850*

Half the ladies of our acquaintance carry their jewels to town, and bring nothing, but paste and **marcasites** back. *Goldsmith, The Stoops to Conquer III*

2 In recent use, the orthorhombic iron pyrites, or non-disulphid, FeS₂. It has a lower specific gravity than ordinary pyrite, and on an untabulated surface a somewhat paler color, in consequence of which it is often called *white iron pyrites*. The crystallized varieties take various imitative forms called *cockscumb pyrites*, *spear pyrites*, etc. The massive kinds are often radiated, concretionary, etc. Marcasite is much more liable to alteration than ordinary pyrite, passing by oxidation into iron sulphate or copposite. The two kinds of iron pyrites often occur together, and the greater proportion of marcasite the more the liability to alteration. This has been shown (Tollon) to be an important element in the durability of building stones containing pyrites.

marcasitic (már-ka-sít'ik), *a* [*< marcasite + -ic*] Pertaining to marcasite, of the nature of marcasite.

marcasitical (már-ka-sít'ik-ál), *a* [Formerly also *marchaisical*, *< marcasite + -al*] Same as **marcasitic**.

The place that abounds with these **marcasitical** minerals. *Boyle, Works, III 381*

marcassin (mär'ka-sín), *n* [*< F marcassin*, a young wild boar, a grise] In *her*, the young wild boar, used as a bearing. This bearing is distinguished from the bear by having the tail hanging down and not curled round in a ring.

marcato (mär-ka'tō), *a* [*It*, pp. of *marcare*, mark see *marcando*] Same as **marcando**.

marceline (már'se-lín), *n* [*< F marceline*, so called from St. Marcel in Piedmont, where the original specimen was found] In *mineral*, an altered form of rhodonite, or silicate of manganese, in which the manganese protoxide has been converted into sesquioxide.

marceline (már'se-lín), *n* [Also *marcelline*, *< F marceline* (a trade-name?)] A thin silk fabric used for linings, etc., in women's costume.

Marcellian (már-sel'ian), *a* and *n* [*< Marcellus* (see *def*) + *-ian*] 1. Pertaining to Marcellus of Ancona in Asia Minor, or to his doctrines.

2 *n* One of the professed followers of Marcellus, Bishop of Ancona in the fourth century. The Marcellians held the doctrine nearly agreeing with that of the Sabellians, that the Holy Spirit and the Word or Logos, are merely impersonal agencies and qualities of God, and that the incarnation of the Logos is temporary only. It has been doubted by some whether Marcellus held the views ascribed to him.

marcelline, *n* See *marceline*.
Marcellinist (már-sel'in'ist), *n* [*< Marcellina* (see *def*) + *-ist*] An adherent of Marcellus, a female Gnostic of the second century, and a teacher of Gnosticism in Rome. Also *Marcellinian*.

Marcellus group [Named from the town of *Marcellus*, in New York] The lowest division of the Upper Devonian, according to the classification of the New York Geological Survey. It is a thin shaly rock, often containing carbonaceous matter.

marcescent (mär-ses'ent), *a* [= *F marcescent*, *< L marcescent* (*-tis*), pp. of *marcescere*, wither, pine, fade, decay, inceptive of *marcere*, wither, droop, shrivel, be feeble or languid, faint] Withering, fading, decaying. Specifically (*a*) In bot. withering, but not falling off (the part bearing it is perfected, as, a **marcescent** perianth. (*b*) In *zool.*, appearing shriveled or withered, as the spines on certain *Hemiptera*.

Marcgravia (már-grá'vi-á), *n* [Plumier (1703), named after Georg Marcgraf (17th century), who traveled in South America and wrote, with W. Piso, a work on the natural history of Brazil] A genus of dicotyledonous polypetalous plants of the natural order *Tenacostemataceae*, type of the tribe *Marcgraviae*. It is peculiar in having the petals stuck together in a hood like

mass, numerous stamens, and sac-shaped bracts at the apex of the usually umbelliform spikes.

Marchantiaceae (märk-grü-vi-ä-sö-ä), *n. pl.* [NL. (Jussieu, 1809), < *Marchantia* + *-acea*] A former order of plants, now made a tribe of the *Tenostemataceae* under the name *Marchantia*.

Marchantia (märk-grü-vi-ä-sö-ä), *n. pl.* [NL. (Choisy, 1824), < *Marchantia* + *-ae*] Originally, a suborder of plants of the *Marchantiaceae*, now, a tribe of the *Tenostemataceae*, typified by the genus *Marchantia*. It embraces 5 genera of tropical American plants with imbricate or coherent hood-shaped petals, anthers fixed by the base, and numerous stamens. They are climbing or epiphytic woody plants, with flowers in terminal racemes, frequently intermixed with peculiar shaped bracts.

march¹ (march), *n.* [ME *marche*, partly (a) < AS *marc* (gen. dat. *marce*), border, bound, mark, partly (b) < (OF *marche*, F *marche* (= P *Sp* *lg* *It* *marca*, ML *marca*), border, bound, frontier, the Rom. forms being from the OHG cognate with AS *marc* see further under *mark*¹, *n.*] A frontier or boundary of a territory, a border, hence, a borderland, a district or political division of a country continuous with the boundary-line of another country. In Scotland the term is commonly applied to the boundaries, or the marks which determine the boundaries of continuous estates or lands, whether large or small. The word is most familiar historically with reference to the boundaries between England and Wales and between England and Scotland. The latter was divided into two parts, the western and the middle marches, each of which had courts peculiar to itself, and a kind of president or governor, who was called *warden of the marches*. See *mark*¹, 13.

Gascoigne, Fruits of War

5 In music, a strongly rhythmical composition designed to accompany marching or to imitate a march-movement. The rhythm is usually duple, but it may be triply compound. Marches generally consist of two contrasted sections, the second of which (commonly called the *trio*) is softer and more flowing than the first, and is followed by a repetition of the first. Rapid marches are often called *quicksteps* or *military marches*. Slow marches are also called *processional marches*, and are further distinguished as *funeral* (or *dead*), *nuptial*, *triumphal*, etc.

F. H. Knight — 7 In the game of euchre, a taking of all five tricks by one side. — **Flank march**. See *flank*¹ — **Forced march**, a march vigorously pressed in certain emergencies in time of war, as to effect a rapid concentration of troops or a strategical combination. It is exhausting to even the best troops, and as a rule should not exceed thirty miles a day. Special care is supposed to be taken to avoid such exhaustion just before going into action. The troops are relieved by changing the gait, alternating the double with the quick time, and in the cavalry the horses are relieved for fifteen minutes every hour by the dismounting and marching of the men. Any distance over twenty miles a day is reckoned a *forced march*. — **March past**, the march of a body of soldiers in front of a reviewing officer or some high dignitary.

Between 2,000 and 3,000 troops mustered on the ground and their march past was an event of the highest political significance

Marcus*, a personal name] 1. *n* A follower of Marcion of Sinope, a Gnostic religious teacher of the second century, and the founder at Rome of the Marcionite sect, which lasted until the seventh century or later. Marcion taught that there were three primal forces: the good God, first revealed by Jesus Christ, the evil matter, ruled by the devil, and the Demiurge, the finite and imperfect God of the Jews. He rejected the Old Testament, denied the incarnation and resurrection, and admitted only a gospel akin to or altered from that of St. Luke and ten of St. Paul's epistles as inspired and authoritative, he repeated baptism thrice, excluded wine from the eucharist, inculcated an extreme asceticism, and allowed women to minister. See *Crémonan*.

II. *a* Pertaining to or characterized by the principles of Marcion as, the *Marcionite Church*

Marcionitic (mār'shon-it'ik), *a* [< *Marcionite* + *-ic*] Of or pertaining to the Marcionites or their doctrines

A pearl [Obsolete or poetical]

Rich orient pearl,
More bright of hue than were the *margarites*
That Caesar found in wealthy Albion
Greene, *Orlando Furioso*

2 A mineral of micaceous structure, separable into thin laminae which are rather brittle. It has a grayish or reddish color and a pearly luster on the cleavage-surface (hence called *pearl-mica*). In composition it is a silicate of aluminum and calcium. It is a common associate of corundum. It is one of the so-called *brittle micas*.

3 In *lithol*, an arrangement of the devitrification products (globulites) of a glassy material into forms resembling strings of beads, a term introduced by Vogelsang - 4 Same as *margarita*, 1

margaritic (mär-ga-rüt'ik), *a*. [*< margarite + -ic*¹] Pertaining to or resembling pearl or margarite. **Margaritic acid**, one of the fatty acids which result from the saponification of castor-oil

margaritiferous (mär'ga-rüt'if'e-rus), *a* [*< L. margaritifer*, pearl-bearing, *< margarita*, a pearl (see *margarite*), + *ferre* = *E. bear*] Pearl-bearing, producing pearls; margaritaceous

margaritite (mär'ga-rüt'it), *n* [*< NL Margaritites*, a generic name of such shells, *< L. margarita*, a pearl see *margarite*] A fossil pearl-oyster or some similar margaritiferous shell

Margarodes (mär-ga-ro'döz), *n* [NL, *< Gr. μαργαροδης*, pearl-like, *< μαργαρον*, a pearl (see *margarite*), + *odios*, form] 1 A genus of scale-insects of the family *Coccidae*. *M. formicarius* so named from its pearly appearance and from its living with ants, is known in the Bahamas as the ground pearl. Its scale covering has caused it to be mistaken for a mollusk. These insects are sometimes strung like beads in necklaces. The genus is probably the same as *Porphyrophora* of Brandt (1833), it was named the same year by Guldinger

2 A genus of pyralid moths, typical of the family *Margarodidae*, erected by Guenee in 1854, having the wings immaculate, neither fasciate nor marginate, and the body stout. They occur in most parts of the world, more abundantly in tropical countries. *M. quadratipennis* of the United States feeds in the larval state on the privet

Margarodidae (mär-ga-ro'dä-dä), *n pl* [NL, *< Margarodes + -idae*] A family of pyralid moths named from the genus *Margarodes*, having ample, entire, silky, semi-hyaline, nidescent or pearly wings, often bordered and seldom marked. The abdomen of the male has an apical tuft which is often hind. It is a large wide spread family of some 20 genera, as *Phacellura*, which contains the moths whose larvae are known in the United States as *melon caterpillars* and *pebble worms*

margarodite (mär'ga-rö-dit), *n* [*< Gr. μαργαροδης*, pearl-like (see *Margarodes*), + *-ite*²] A variety of muscovite, or common potash-mica, affording, upon ignition, a small percentage of water

margaron, **margarone** (mär'ga-rön, -rön), *n* [*= F. margaron*, as *margar* (*< F. marg*) + *-on*, -*one*] A solid white fatty matter which crystallizes in pearly scales, and is obtained by distilling margaric acid with excess of lime

margarize (mär'gar-i-zä), *v t*, pret and pp *margarized*, *pp* *margarizing* [*< Margary* (see def.) + *-ize*¹] In the antiseptic treatment of timber, to impregnate (the wood) with a solution of sulphate of copper. The word is derived from the name of the inventor of the process J. J. Lloyd Margary

margate-fish (mär'gät-fish), *n* A fish, *Hamulon gibbosum* or *album*, inhabiting the Caribbean Sea and Florida Keys. Its color is pearly white, somewhat olivaceous above, with obsolete spots on some of the scales, the mouth is orange within, and the lips and a faint blotch on each side of the snout are light yellow. It reaches a length of 2 feet or more, and is one of the most important food fishes of Havana and Key West. Also called *market fish*, *maggot-fish*, *margaret-ornament*

Margaux (mär-gö'), *n* [*F. see def*] Claret produced in the commune of Margaux, in the department of the Gironde in France. Its better grades closely resemble the Chateau Margaux. See *chateau*

margay (mär'gä), *n* [*= F. margay*, *< Braz. tigrina*, or *F. margay*, also, some related species. They are small spotted and striped cats resembling the ocelot, ranging from Mexico to Paraguay. The margay is about 2 feet long, the tail from 12 to 18 inches. It has been domesticated and made useful in destroying rats, like the common house-cat. Also *marjay*

marge (märj), *n*. [*< F. marge* = *Pr. marge* = *D. marge*, *< L. margo (margin-)*, border, margin: see *margin*.] Same as *margin* [Poetical]

margin (mär'jin), *n* [Also *marge* (*< F.*) formerly also *margin* (and *margent*, *q v*), *< ME. margin*, *margyne*, *< OF. margine* (usually *marge*, *F. marge*) = *Sp. margen* = *Pg. margem* = *It. margine*, a border, margin, = *Serv. margina*, a hill (as a boundary, an anti-hill, mole-hill), *< L. margo (margin-)*, edge, brink, border, margin see *mark*¹] 1 A bordering or bounding space, a border, a space between one edge or line and another, as that along a river between the edge of the water or of its bed and a real or imaginary outer line, or the like, or that between the edges of a leaf or sheet of paper and those of the printing or writing on it. In some plants the leaf (then called *marginale*) has a distinct margin or border of different formation or coloration from the main body. In the case of a book, *margin* alone usually means the clear space between the print and the outer edge of the leaf called distinctively the *front margin*, the *head* or *top margin* is at the top of the page, the *tail* or *bottom margin* at the foot, and the *back margin* on the inner side against the back. Parts of these margins, especially at the sides, may be occupied by marginal notes, remarks, or the like. An *opened margin* is one where the leaves have been opened or separated, as with a folder but not trimmed an *uncut margin* has not been cut anywhere, a *rough cut margin* has only the more protruding ragged edges cut off with scissors. In a *cropped margin* too much paper has been cut away, in a *bed margin* part of the print has been cut away.

We came into the road, where I saw an antient way
about eighteen feet broad, paved with large round stones,
having a *margin* on each side, partly of hewn stone.

Specifically — (a) In an engraving, the paper left blank outside the plate mark. (b) In *entom*, properly, the outer part of a surface or distinct portion of the integument, as distinguished from the central part or disk. In this sense *margin* is not to be confounded with *edge*, which is used to denote the extreme boundary of a part but where distinction is unnecessary, the two terms are often used synonymously. (c) In *conch*, the edge or entire outline of a bivalve shell. (d) In *bot* (1) The edge. (2) A distinct border, different from the body of the organ, as the membranous expansion surrounding some seeds or seed vessels, a narrow wing.

2 In *joinery*, the flat part of the stiles and rails of framed work. Doors which are made in two widths

or leaves are called *double-margined*, in consequence of the stiles being repeated in the center, and so are also those doors which are made to imitate two leaved doors.

3 Latitude, scope, or range, freedom from narrow restriction or limitation, room or provision for enlarged or extended action.

Their *margin* of effective operation is strictly limited, still, such a *margin* exists, and they [trades unions] have turned it to account. *Ras*, Contemporary Socialism, viii.

4 Allowance made, security given, or scope afforded for contingencies, as profit or loss in trade, error of calculation, change of circumstances, diversity of judgment or opinion, etc.

There is always *margin* enough in the statute for a liberal judge to read one way and a servile judge another. *Emerson*, Fugitive Slave Law.

5. In speculative dealings on the exchanges (a) The sum in money, or represented by securities, deposited by a speculator or trader with his broker as a provision against loss on transactions made on account. This margin is usually reckoned at 10 per cent of the par value of stocks or bonds, and 10 cents per bushel or barrel on grain or oil. If the price rises or falls to a satisfactory extent, a sale or purchase is made, and the gain is the customer's profit, less the broker's charges. If the price falls below or rises above the margin furnished and the purchase is to be protected in expectation of a future rise or fall, the customer is required to furnish ("put up") more margin to cover the difference.

The banks refused to loan upon any except first-class collateral, and commission houses regarded the market as in a somewhat dangerous condition for speculators on *margin*. *Appleton's Ann. Cyc.*, 1886, p. 342.

(b) A deposit made by each of two brokers, parties to a contract, when one is "called up" (as it is termed) by the other. This mutual deposit (usually of 5 per cent) is made in some bank or trust company agreed upon, and remains subject only to a joint check or draft during the continuance of the contract upon which it has been called. — *Cardinal*, *costal*, *dentate*, *dilated margin*. See the adjectives. — *Dislocated margin*. See *dislocate*. — *Double margin*, a margin in which there is a fine groove along the outer side, the margin being thus composed of two parallel edges or calines with the groove between them. — *Eroded margin*. See *erode*. — *Filate*, *incrassate*, *inferior*, *inner*, etc., *margin*. See the adjectives. — *Margin draft*. See *margin-draft*. — *Margin of a course*, in arch., that part of the upper side of a course of slates which is left uncovered by the next superior course. — *To make margin*, in printing, to determine the proper amount of margin to be given to printed pages by the selection of blanks or of low furniture of suitable sizes. — *Syn* 1. Confine, limit, skirt. See *rim*.

This right, which originated in the interest of the feudal superior to secure a fit tenant, grew to be a pecuniary resource, and was enforced by imposing on heirs and heiresses refusing to be thus disposed of, or marrying without royal consent, a forfeiture of double the value of the right of disposal thus denied.

A mark in this general sense is understood to be an incidental or a casual effect, without significance except with reference to means or results.

Ye shall not make any cuttings in your flesh for the dead, nor print any marks upon you *1 Cor* xix 28

Specifically — 2 An impression or attached sign, stamp, label, or ticket, a significant or distinguishing symbol or device, that which is impressed or stamped upon or fixed to something for information, identification, or verification as, a manufacturer's mark on his wares (see *trade-mark*), the mark made by an illiterate person opposite or between the parts of his name when written by another on his behalf, a merchant's private mark on his goods, to indicate their price or other particulars to his assistants, a mark branded on an animal by its owner, to give a student so many marks for proficiency See *hall-mark*. Innumerable marks are a cipher word, or other device put upon a piece of ware, usually on the bottom or the under side, as an indication of the pottery from which it comes, a signature of the painter who decorated it, or the like. Such marks are often impressed in the clay before the glaze is applied and often painted under the glaze, or otherwise permanently affixed. Very rarely they form a part of the decoration, as the Chinese characters painted in gold or red on the Japanese were known as *kaga* or *kutan*. On a nautical lead line a mark is one of the measured indications of depth consisting of a white, blue, or red rag, a bit of leather, or a knot of small line.

3 A distinguishing physical peculiarity, a spot, mole, nevus, special formation, or other singularity, a natural sign as, a birth-mark, the marks on sea-shells or wild animals. In farriery the mark is a deep median depression on the cutting surface of the incisor tooth of a horse, due to the flexion of a vertical fold of the tooth. It is seen of different characters according to the wear of the tooth, being thus to some extent an index of a horse's age. It disappears after the tooth is worn down beyond the extent of the fold. The dark color is due simply to the accumulation in the fold of food or dirt. See the quotation under *mark tooth*.

It that by good use and experience hath in his eye the right mark and very true lustre of the diamond rejecteth and will not look upon the counterfeit, be it ever so well handled, ever so craftily polished.

Sir T. More, Utopia (tr. by Robinson), Int., p. xc

For marks devised in men's nativity
Are nature's faults, not their own infamy.

Shak., Lear, i. 1. 538.

4 A significant note, character, sign, token, or indication, a determinative attestation. In logic, to say that a thing has a certain mark is to say that something in particular is true of it. Thus, according to a certain school of metaphysicians "incognizability is a mark of the infinite."

Bulfinch, Diary, Oct. 31, 1640

A mark is that in a thing which constitutes a part of the cognition of it, or, what comes to the same thing, a partial representation so far as it is considered as a ground of cognition of the whole representation. All our concepts are therefore marks, and all thinking is nothing but representing by marks.

It was generally equal to 8 ounces. In 1574 the Cologne mark was made the standard for gold and silver throughout the German Roman empire, and copies were distributed to all the principal cities. But owing to the carelessness with which these were made, preserved, and copied, the Cologne mark came to have different values in different places. The following table shows the values of some of the principal marks in English troy grains, either directly as given, or reduced from French grains, doll, or milligrams. The larger discrepancies are in most cases due to known changes of standards.

The word *marl*, however, is used so vaguely as to be often ambiguous, and in England some substances are thus designated in which there is no lime. Marl is a valuable fertilizing material for different kinds of soil, according to its composition. In New Jersey the mixtures of greensand with clay much used as fertilizers are commonly called *marls* or *greensand-marls*, and many varieties thus designated contain no more than one or two per cent. of carbonate of lime. Marls and marly soils are especially well developed in the Permian and Triassic of England and on the continent. 2 Now, specifically, a small squirrel-like South American monkey of the family *Hapidae*, or *Mididae* (which see for technical characters). There are numerous species referred to two leading genera *Hapale* and *Midas*, and known by many names, as *squirrel monkey*, *outlet*, *tamarine*, etc. They are the smallest of the monkey tribe, ranging from a few inches to a foot in length, with a long, bushy, non prehensile tail, and thick, soft silky or woolly fur, in some species lengthened into conspicuous ear tufts or a kind of mane. The coloration is extremely variable. The thumb of the hand is not opposable, but the inner toe of the hind foot serves as a thumb, and has a flat nail, all the other digits of both extremities being armed with sharp claws of great service in climbing. Marmosets are confined to tropical America, having their center of abundance in northern South America. They live in the woods, and feed chiefly upon insects. They are extremely sensitive to cold, but with proper care may be kept in confinement, and make amusing pets though their intelligence is low. Characteristic examples are the common black eared marmoset, *Hapale jacchus*, and the marakini or tamarin, *Midas rodalia*. See cut under *Hapale*.

There are several species of Europe Asia, and North America. They are the largest living representatives of the *Sciuridae* or squirrel family, of stout thick set form, with short bushy tail. They are terrestrial and fossorial, living in underground burrows, generally in open ground and often in communities and hibernates in winter. The species to which the name was originally given is *Arctomys marmotta* or *A. alpinus* inhabiting the Alps and Pyrenees. *A. bobac* is the Asiatic marmot, occurring also in

parts of Europe, especially in Russia. North America has at least three species the common woodchuck or ground-hog, *A. monax*, found abundantly in many parts of the United States and Canada, the yellow-bellied marmot of the Rocky Mountains, *A. flaviventris*, and the large hoary marmot or whistler of northwestern America, *A. flaviventris*. Besides the foregoing, some of the larger species of the related genera *Cynomys* and *Spermophilus*, which include the prairie-dogs and marmot-squirrels, are sometimes called *marmots*. Maronite (mar'ō-nit), *n* [= *F Maronite*, as *Maron* (see def) + *-it*] One of a body of Syrian Christians dwelling chiefly in the mountains of Lebanon and Anti-Lebanon. They are named from St. Maron, a Syrian monk (about A. D. 400), or less probably from John Maron, patriarch of the sect in the seventh century. The Maronites were originally Monothelites, but they entered into a partial union with the Roman Catholic Church in 1182, which after an interruption was made closer in 1445 and again in 1596. They still retain their own patriarchate of Antioch (now seated at Ka-nobin), their Syrian liturgy (although Arabic is now their vernacular tongue), the marriage of priests, their tradition of fast-days and the use of both elements in lay communion. The Maronites as a tribe were formerly under the same local government as the Druses, with whom they have had some bloody conflicts. In 1861, after a severe outbreak, they were put under a separate governor.

marriage (mar'āj), *n* [*< ME. marriage*, < *OF. (and F.) mariage* = *Fr. mariage*, *marriage* = *Sp. maridaje* = *It. maritaggio*, < *ML. maritaticum*, marriage, < *maritus*, a husband, *marita*, a wife see *marital*, *marry* 1] 1 The legal union of a man with a woman for life, the state or condition of being married, the legal relation of spouses to each other, wedlock. In this sense marriage is a status or condition which, though originating in a contract, is not capable of being terminated by the parties' rescission of the contract, because the interests of the state and of children require the affixing of certain permanent duties and obligations upon the parties.

2 The formal declaration or contract by which a man and a woman join in wedlock. In this sense marriage is a civil contract, implying the free and intelligent mutual consent of competent persons to take each other, as a present act, as husband and wife, and according to the modern and most prevalent view no formalities other than such as the law of the jurisdiction may expressly impose are necessary to prevent either from subsequently repudiating the other or denying the legitimacy of their issue. The formalities provided for by the law of some of the United States are optional, being intended chiefly to enable the parties to preserve authentic evidence of the contract. When a man and a woman live and cohabit together, and conduct themselves as man and wife in the society and neighborhood of which they are members, till the belief and reputation that they are married become general, their marriage is presumed, without other evidence, for purposes of enforcing rights and liabilities of third persons.

It varies greatly in different situations. Ordinary marrow of the shafts of adult bones, as the humerus and femur, is a soft yellow solid consisting of about 95 per cent of fat. The red marrow of various bones, vertebral, cranial, sternal, and costal is softer, and contains very few fat cells, but numerous marrow cells and cells resembling the nucleated red corpuscles of the embryo. The so-called spinal marrow, or medulla spinalis, is the spinal cord, the central axis of the nervous system, a tissue of an entirely different character, not found in the hollow of a bone, but in the cavity running through the chain of vertebrae.

Mars (marz), *n* [1. *Mars* (*Mai-*), (OL *Maion* (*Maion-*), also *Marmar*, Oscan *Mamers* (*Mamert-*), *Mars*] 1 A Latin deity, identified at an early period by the Romans with the Greek Ares, with whom he had originally no connection

He was principally worshiped as the god of war, and as such bore the epithet *Gradivus* but he was earlier regarded as a patron of agriculture, which procured him the title of *Silvanus*, and as the protector of the Roman state, in virtue of which he was called *Quirinus*. In works of art Mars is generally represented as of a youthful but powerful figure, armed with the helmet, shield, and spear, in other examples he is bearded and heavily armed. See *cut under Ares*

2 The planet next outside the earth in the solar system. Its diameter (about 4 200 miles) is only 0.63 that of the earth, its superficies 0.28 and its volume 0.147. Its mean density is 0.71 that of the earth, so that the density of its crust may very likely be about the same as the earth's, but the weight of a given mass at the surface of Mars is only three eighths of the weight of the same mass on the earth. The strength of materials is therefore relatively much greater there, and mountains, animals and buildings would naturally be much larger. The mean distance from the sun is 141,500 000 miles. The eccentricity of its orbit is very much greater than that of the earth, being 0.093 in place of 0.017. The inclination of its equator to its orbit is about the same. Its day is half an hour longer than ours. Its year is 687 of our days. The surface of Mars has been carefully mapped, and is characterized by the predominance of land and the great number of canals or straits. Its color is strikingly red. Its climate is, perhaps, not very different from that of the earth. It has two moons, discovered by Professor Asaph Hall in Washington in 1877 conformably to the prediction of Kepler, and realizing the fancies of Swift and of Voltaire. The inner of these, Phobos, revolves in less than 8 hours, so that to an observer on the planet it rises in the west and sets in the east. The outer, Deimos, revolves in 30 hours, so that it appears nearly stationary for a long time. The symbol of Mars is ♄, which seems to show the shield and spear of the god. A planetoid has recently been discovered whose orbit falls within that of Mars

They have discovered two lesser stars, or satellites, which revolve about Mars, whereof the innermost revolves in the space of ten hours, and the outermost in twenty one and a half

marsh-mallow (marsh'mal'ô), *n* [*ME* *marshmalwe*, < *AS* *mersmealewe* (-*mealewe*, -*mealewe*), < *merse*, marsh, + *mealewe*, mallow.]

1 A shrubby herb, *Althaea officinalis*, growing in marshy places, especially maritime, in the temperate regions of the Old World, and on the coast of New England and New York. The flowering stalks are two or three feet high, the leaves broadly oval, the moderate sized flowers pale rose color, chiefly in a terminal spike, but some petioled in the upper axils. The mucilaginous root is used as a demulcent, it also forms the basis of well known confections. The name has been locally applied to other plants, as *Malva sylvestris*. See *Althaea* and *althem*, and cut in preceding column

2 A paste or confection made from the root of this plant. [In this sense usually written *marshmallow*]

marsh-marigold (marsh'mar'i-göld), *n* A golden-flowered plant, *Callitha palustris* in the United States also called *cowslip*. See *Callitha* and *gowan*

marsh-miasma (marsh'mi-az'mä), *n* Miasma from marshes or boggy spots, the infectious vapors which arise from certain marshes and marshy soils, and produce intermittent and remittent fevers

marsh-nut (marsh'nut), *n* Same as *marking nut*

marsh-parsley (marsh'pars'li), *n* 1. A plant, *Apium graveolens*, varieties of which form the cultivated celery—2 A European umbelliferous plant, *Puccinellium (Selinum) palustre*. Its root has been used as an antispasmodic

marsh-peep (marsh'pëp), *n*. The least stint or Wilson's sandpiper, *Tringa (Actodromas) minutilla*, the smallest and one of the most abundant of its tribe in North America

marsh-pennywort (marsh'pen'i-wört), *n* A creeping umbelliferous plant of Europe, *Hydrocotyle vulgaris*. It is also called *white-rot*. See *fluke wort*, and cut under *Hydrocotyle*

marsh-pestle (marsh'pes'tl), *n* Same as *marsh-bettle*

marsh-plover (marsh'pluv'er), *n* The pectoral sandpiper, *Actodromas maculata* a gunner's misnomer [Plymouth Bay, Massachusetts]

marsh-pullet (marsh'pul'et), *n* The common American gallinule *Gallinula galeata*. See cut under *gallinule* [Washington, D C]

marsh-quail (marsh'kwäl), *n* The meadow-lark, *Sturnella magna* [Local, New Eng]

marsh-ringlet (marsh'ring'let), *n* A kind of butterfly, *Gnomophana darus*

marsh-robin (marsh'rob'in), *n* The chowink or towhee-bunting, *Pipilo erythrophthalmus* so called from its haunts, and the reddish color on the sides of the breast [Local, U S]

marsh-rosemary (marsh'rör'mä-ri), *n* 1 A plant, *Statice Limonium*, the root of which is a strong astringent, and is sometimes used in medicine [U S]—2 An occasional name of the wild rosemary. See *Ledum*

marsh-samphire (marsh'sam'fir), *n* A leafless, much-branched, jointed, succulent plant, *Salicornia herbacea*, found on muddy or moist sandy shores in both hemispheres. It is eaten by cattle and makes a good pickle. See *glasswort* and *Salicornia*

marsh-shrew (marsh'shrö), *n* An aquatic shrew of North America, *Neosorex palustris*, and other species of the same genus. The technical characters are similar to those of the water shrew of Europe, *Crossomys fodens*. They inhabit the northern United States and British America, ranging further south in alpine regions. See *Neosorex*

marsh-snip (marsh'snip), *n* The common American snipe, the meadow-snip [Maryland, U S]

marsh-tackey (marsh'tak'ei), *n* A small horse peculiar to the coast-line of the southern United States, a swamp-pony. *Sportsman's Gazette*

marsh-tea (marsh'të), *n* See *Ledum*

marsh-tern (marsh'tërn), *n* The gull-billed tern or sea-swallow, *Gelochelidon niotha* or *anglica*, of Europe, Asia, and America. See cut under *Gelochelidon*

marsh-tit (marsh'tit), *n* A European titmouse, *Parus palustris*, closely resembling the coal-tit

marsh-watercress (marsh'wä'tër-kres), *n* Same as *marsh-cress*

marshwort (marsh'wört), *n* 1 The cranberry, *Vaccinium Oxyococcus*—2 The umbelliferous plant *Helosciadium (Sium) nodiflorum* [Eng]

marsh-wren (marsh'ren), *n*. One of several different wrens which breed exclusively in marshes. Two are common in the United States, of which the best-known is the long-billed marsh-wren, *Ototothorus palustris*, found in suitable localities throughout most of North America. It is scarcely 5 inches long, above brown with a dorsal patch of black streaked with white, below white shaded on the sides, flanks, and crissum, the tail with fine blackish bars on a brown ground. This little bird is noted for its great globular nests with a hole in the side, affixed to the reeds and other rank herb-

age of the marshes it colonizes. It lays from 6 to 10 eggs of chocolate brown color, but many of the nests never have eggs in them, being apparently built and used by the males alone. A variety of this species found in California is known as the *tule wren*. The short-billed marsh wren, *C. stellaris* is quite different, being almost entirely streaked above with black and white, besides the distinction implied in the name. It nests differently, lays white eggs, is less abundant, and is chiefly observed in the United States east of the Mississippi. Other kinds of marsh wrens, mostly like the short-billed, inhabit Mexico, Central and South America, and the West Indies, but none of this genus are found in the Old World

marshy (mär'shi), *a* [*ME* *mershy*, *merschy*, < *marsh* + *-y*] 1. Partaking of the nature of a marsh, swampy, fenmy

Marsilea (mar-sil'ë-a), *n* [NL (Linnaeus, 1767), named after Aloysius Marsili, an early Italian naturalist] A genus of aquatic or subaquatic

Marsilea quadrifolia
a the sporocarp or conceptacle b a sporocarp with valves opened and emitting the mucilaginous cord which bears the sori

cryptogamous plants, typical of the order *Marsileaceae*. They have wide-creeping rootstocks, and leaves produced singly or in tufts from nodes of the rootstock, each consisting of a petiole and four sessile, equally spreading, deltoid cuneate or oblanceolate leaflets with flabellate anastomosing veins. The conceptacles or sporocarps are ovoid or bean shaped and two valved, and emit a mucilaginous cord upon which are borne numerous oblong cylindrical sori, each sorus containing numerous microsporangia and few macrosporangia. The genus is widely distributed, and embraces 40 species, of which 4 are North American. *N. Drummondii* is the Australian hardoo. Sometimes written *Marsilia*.

Marsileaceae (mär-sil-ē-ā'sē-ē), *n. pl.* [NL (A. P. de Candolle, 1830), < *Marsilea* + *-aceae*] An order of leptosporangiate heterosporous fern-like plants, in which the fructification consists of sporocarps either borne on peduncles which rise from the rootstock near the leaf-stalk or consolidated with it, and contains both macrospores and microspores

Marsilea (mär-sil-ē-ā'sē-ē), *n. pl.* [NL (Baker, 1887), < *Marsilea* + *-ae*] With some systematists, a suborder of plants of the order *Rhizocarpha*, or heterosporous *Filicinae* virtually the same as the order *Marsileacea*

fixed sacs within branchial apertures on each side, or more in number, the lower jaw defective, and the mouth round like a sucker, whence the alternative name *Cyclostomus*. In the earlier systems the *Marsipobranchii* were regarded as an order or a subclass of fishes; they are now designated as a class of *Vertebrata*, and divided into two primary groups, *Hyperoartia* and *Hyperotricha* the former comprising the lampreys, the latter the hags. Both are known as *myzonts*. *Marsipobranchia* is a synonym of *Cyclostomata*, 2. See out under *lamprey*

II. *n.* A member of the order *Marsupialia*, any implantal didelphian mammal. Also called *Marsupiate* — **Herbivorous Marsupialia**. See *herbivorous Marsupialia*

Marsupialia (mär-sū'pi-ā-lī-ā), *n. pl.* [NL, neut pl of *Marsupialis* see *Marsupial*] An order of the class *Mammalia*, coextensive with the subclass *Didelphia*, containing implantal mammals usually provided with a Marsupium or pouch for the reception and nourishment of

the young, the Marsupials or pouched animals. There being no developed placenta, the period of gestation is very brief, and the young are born extremely small, imperfect, and quite helpless. In this state they are immediately transferred to the pouch on the belly of the mother, where are the teats, to which the little creatures adhere firmly for a while, completing their development by sucking milk. As they grow larger and stronger they are able to let go and take hold of the teat again and even after leaving the pouch they may for a while resort to it or be carried about elsewhere on the mother's body. (See out under *Marsupium*) The uterus is double, and the vagina also is more or less completely divided into two separate passages (when the name *Didelphia*) the scrotum of the male is abdominal in position and pendulous in front of the penis. The corpus callosum is rudimentary but the central hemispheres are connected by a well developed anterior commissure. The angle of the mandible is normally inflected. There is a wide range of adaptive modification in the structural details of the Marsupials, the order in itself including representatives or analogues of nearly all the other orders of mammals, as the carnivorous, the insectivorous, the herbivorous, etc. At the present time the Marsupials are entirely characteristic of the Australian region, only the *Didelphidae* or opossums being found in America, but in former epochs the distribution of the Marsupials was general and some of the oldest known mammalian fossils of Mesozoic age are supposed to belong to this order. It has been variously subdivided. Owen in 1830 divided it into five tribes *Sarcophaga*, *Entomophaga*, *Carpophaga*, *Pachyaga*, and *Labiophaga*. A main division, based on the dentition is into *Diprotodontae* and *Polyprotodontae*. In 1872 Gill made the four suborders *Rhizopoda*, *Synactylidae*, *Thylacynidae*, and *Didelphidae*, with nine families, *Phalangeridae*, *Macropodidae*, *Tarsipedidae*, *Phalangeridae*, *Phalangeridae*, *Peramelidae*, *Dasyuridae*, *Martiniidae*, and *Didelphidae* for the living forms, and four fossil families, *Diprotodontidae*, *Thylacynidae*, *Plagiodontidae*, and *Dromatidae*.  subfamily *Mustelina*, and genus *Mustela* or *Mar-*
tes, of which there are several species, all in-
habiting the northern hemisphere. The name
was originally given to the common pine marten
**Mustela martes* or *Martes martes* of the northerly parts of Europe.*
This animal is about 18 inches long, with a full bushy tail
12 inches long and thus rather larger than a house cat,
but standing much lower, on account of the shortness of
the legs. The fur, consisting of three kinds of hairs, is
full and soft and of an extremely variable shade of brown,
usually paler on the head and under parts. A closely re-
*lated species is the stone or beech marten, *Mustela foina**
of Great Britain and many other parts of Europe. It is, on
the average smaller in size, with a whitish throat and infe-
*rior pelage. The American pine marten, *M. americana**
is similar, but specifically distinct, it inhabits the north-

American Sable or Pine marten (*Mustela americana*)

erly United States and the whole of British America, and
 is commonly called the *American sable*. The Siberian or
 true sable is *M. zibellina*, of blackish color and with an ex-

 nant's marten, *Mustela pennanti*, much larger than any of
 the foregoing and of a blackish color, is a very distinct
 species peculiar to northerly North America. See *sable*,

Ethiops martial! See *ethiops* — *Martial law*, law
 imposed by the military power, that military rule or au-
 thority which exists in time of war, and is conferred by the
 laws of war, in relation to persons and things under and
 within the scope of active military operations, and which ex-
 tinguishes or suspends, for the time being, civil rights and
 the remedies founded upon them, so far as this may be
 necessary in order to the full accomplishment of the pur-
 pose of the war. The person who exercises martial law is,
 however, liable in an action for any abuse of the authority
 thus conferred. It is the application of military govern-
 ment — the government of force — to persons and property
 within its scope, according to the laws and usages of war,
 to the exclusion of municipal government in all respects
 where the latter would impair the efficiency of military law
 or military action. Benet See *military law*, under *military*

salts, an old name of salts of iron = *Syn 2* and *3* *Mar-*
tial, *Warlike Military*. The opposite of *martial* is *civil*, of
warlike is *peaceful*, of *military* is *civil* or *naval*. *Warlike*
 applies most to the spirit or ingrained habits as the *war*
 like traits of the north, but it also applies to that which is
 like war or naturally goes with war as, *warlike* prepara-
 tions, *warlike* rumors. *Martial* applies to that which is
 connected with war in a general way, or with war as active,
 and especially as appealing to the eye or the ear as, *mar-*
tial music, *drum*, *parade*, *appearance*, *array*. *Military* applies
 most closely to things connected with the actual putting
 of soldiers into service. Thus, a court *martial* is composed
 of military officers and may therefore be called a *military*
 court. It applies *martial* law, its members appear in full
 military dress

 swallow of the family *Hirundinidae*, a *martin*-
not, a *martlet*. The name has no specific meaning, and
 is commonly used with a qualifying term. The house-
 martin (or house swallow), *Hirundo* or *Chelidon urtica* of
 Europe, is one of the best-known, so named because it
 nests under the eaves of houses (see *Chelidon*). The
 sand martin, *Cottia* or *Clivicola riparia*, common to Europe,

Masora, Massorah (mas'ō-rā), *n* [Heb., translation] 1 The tradition by which Jewish scholars endeavored to fix the correct text of the Old Testament, so as to preserve it from all corruption.—2 After the ninth century, the book, or the marginal notes to the Hebrew text, in which the results of such tradition are preserved, embodying the labor of several centuries. There is a twofold Masora, a Babylonian or Eastern and a Palestinian or Western, the former being the more important. The Masora not only takes account of various readings, but also contains notes of a grammatical and lexicographical character, including the system of Hebrew vowel-points first established by it. With much that is valuable, it contains also the material from which a critical revision of the Old Testament text can now be derived. Also written *Masorah* and *Massora*.

2 The office for the celebration of the eucharist, the liturgy. The component parts of the mass or liturgy are the ordinary of the mass (*ordo missae*) and the canon of the mass (*canon missae*), succeeded by the communion (sometimes counted part of the canon) and post-communion. Anciently and technically the part preceding the offertory is the mass or liturgy of the catechumens (*missa catechumenorum*), the remainder the mass or liturgy of the faithful (*missa fidelium*). In the Roman Catholic Church different classes of masses are *high mass*, *low mass*, *private mass*, *solemn mass*, etc. See the phrases below.

It needn't now to speak of the *meesse* in the service that they had that day, for it were but waste of time.

3 The sacrament of the eucharist or holy communion. The word *mass* in this and the preceding senses is popularly used of the eucharist as celebrated in the Roman Catholic Church, or of the teachings of that church with regard to the sacrament, as involving not only the doctrine of the real presence and the eucharistic sacrifice, held in some other churches also, but the doctrine of transubstantiation as defined by the Council of Trent. The use of the word *mass* (*missa*) in the Western Church is as old as the fourth century. The Greek Church has no term precisely corresponding to *mass*; the sacrament being generally called the *eucharist* or *body communion* and the office the *liturgy*. At the Reformation the first Prayer Book (1549) of the Church of England retained the name *mass*, which was omitted in the second book (1552) and fell into disuse, being popularly regarded as involving a Roman Catholic view of the sacrament. The use of the word has however been revived to some extent among Anglicans in the present century. Swedish and Danish Protestants use the corresponding word for their own communion office.

4 A musical setting of certain parts of the Roman Catholic liturgy, also of corresponding parts of the Anglican liturgy. It consists usually of the following sections each of which is sometimes divided into separate movements: Kyrie, Gloria (including the *Glorias agnus* and *Gloria tollis*), *Quoniam* (um *Sans* to *Spitus*) *Tredo* (including the *Et incarnatus* and *Et vivas*), *Et Resurrexit*, *Sancus* (including the *Hosanna*), *Benedictus* (including a repetition of the *Hosanna*) and the *Agnus Dei* (including the *Dona nobis*). To these an Offertorium (after the *Credo* and before the *Sancus*) is sometimes added. The Requiem *Mass* differs largely from the regular *mass*, and includes settings of several of the stanzas of the hymn "Dies Irae." The artistic form of musical masses varies widely from unaccompanied plain song to the most elaborate polyphony with orchestral accompaniments. Medieval masses were named usually from the melody which was taken as the subject for contrapuntal treatment, as *Josquin's mass*, "Thomine armé," modern masses are named from the key of the first movement, as Bach's "Mass in B minor."

The same name was also given to an office consisting of part of the

ordinary of the mass, and without either consecration, elevation, or communion said in some places in the middle ages for strangers who came too late for the celebration. The Typica of the Greek Church have been compared to such an office. 5 The quantity of any portion of matter as expressed in pounds or grams, and measured on an ordinary balance with the proper reduction for the buoyancy of the atmosphere, otherwise, the relative inertia, or power in reaction of a body. For example if two bodies at rest but free to move as a gun suspended in vacuo and a bullet in it, are suddenly separated by a force acting between them their respective velocities will be inversely as their *masses* and this phenomenon best defines *mass*. It is usually confounded with weight which is more properly the force with which a body is accelerated in the direction in which a plummet points, in consequence of the earth's attraction and rotation. Thus, if a piece of lead which is found to weigh a pound at the base of the Washington monument is transported to the top, it will be found to weigh a pound there for its *mass* is unchanged. But if only the piece of lead and the balance are carried to the top of the monument, while the weight against which it has been weighed is left at the base, and there attached to the balance at the top by means of a long string or wire (the weight of which is to be properly allowed for), the piece of lead would be found to have lost the weight of one third of a grain, the weight thus varying though the *mass* does not.

The destructive effects of a cannon ball are due entirely to its *mass* and to the relative speed with which it impinges on the target, and would be exactly the same (for the same relative speed) in regions so far from the earth or other attracting body that the ball had practically no weight at all. When we open a large iron gate properly hinged it is the *mass* with which we have to deal, if it were lying on the ground and we tried to lift it, we should have to deal mainly with its weight.

A mast is composed either of a single piece, or of several pieces united by iron bands. When it is of several pieces, it is called a *built mast* or a *made mast*. In all large vessels the masts are composed of several lengths called *lower mast*, *topmast*, and *topgallantmast*. The *royalmast* is now made in one piece with the *topgallantmast*. A mast consisting of a single length is called a *pole mast*. In a full rigged ship with three masts, each of three pieces, the masts are distinguished as the *foremast*, the *mainmast*, and the *mizzenmast*, and the pieces as the *foremast* (proper), *foretopmast*, *foretopgallantmast*, etc. In vessels with two masts they are called the *foremast* and *mizzenmast*. In vessels with four masts, the aftermast is called the *spanker mast* or *jigger mast*.

3 The main upright member of a derrick or crane, against which the boom abuts. (*Builder's Dict.*) — At the mast, on the spar deck at the mainmast the official place of interview between men of the United States navy and their officers when a request is to be made or an offense investigated. — Before or after the mast. See *before*. — Captain of the mast. See *dolphin*.
Hand-mast, a mast-makers name for a round spar at least 24 and not exceeding 72 inches in circumference. Such spars are measured by the hand of four inches there being a fixed proportion between the number of hands in the length of the mast and that contained in the circumference taken at one third of the length from the butt-end. (*Lindell* [Eng.]) — Military mast, a mast carried by a war ship for fighting purposes only, and not for sailing.

Naval ships of the most recent design are often provided with one military mast or more, carrying armor clods or platforms on which are mounted machine guns. Such masts are also used for signaling and to provide stations for lookouts, and, in time of action, for small arm men. When more than one top is placed on a military mast, the lower one carries the machine guns, and the upper the lookouts and small arm men. Such masts are also fitted with derricks for hoisting torpedo boats, etc. out and in. — Sliding-gunter mast, a small mast fitted for sliding upward on an other mast by means of hoops or rings. It is used principally for boats but formerly served as a sky-sail mast rigged above a royal mast. — Spencer-mast, a spar attached abaft the foremast or mainmast to receive the rings or hoops of a spencer. — To spend or expend a mast. See *spend*. — Trysail-mast, or spanker-mast, a small mast (similar to a spencer mast) abaft a lower mast for carrying the hoops to which a try-sail or spanker is bent.

Mast with Spencer mast attached

A mast is composed either of a single piece, or of several pieces united by iron bands. When it is of several pieces, it is called a *built mast* or a *made mast*. In all large vessels the masts are composed of several lengths called *lower mast*, *topmast*, and *topgallantmast*. The royal mast is now made in one piece with the topgallantmast. A mast consisting of a single length is called a *pole mast*. In a full rigged ship with three masts, each of three pieces, the masts are distinguished as the *foremast*, the *mainmast*, and the *mizzenmast*, and the pieces as the *foremast* (proper), *foretopmast*, *foretopgallantmast*, etc. In vessels with two masts, they are called the *foremast* and *mizzenmast*, in vessels with four masts, the aftermast is called the *spanker mast* or *jigger mast*.

See *before*.—Captain of the mast. See *mainmast*.—Dolphin of the mast. See *dolphin*.—Hand-mast, a mast-makers' name for a round spar at least 24 and not exceeding 72 inches in circumference. Such spars are measured by the hand of four inches, there being a fixed proportion between the number of hands in the length of the mast and that contained in the circumference taken at one third of the length from the butt end. *Laid* [Eng.]—Military mast, a mast carried by a war ship for fighting purposes only, and not for sailing. Naval ships of the most recent design are often provided with one military mast or more, carrying armored tops or platforms on which are mounted machine guns. Such masts are also used for signaling and to provide stations for lookouts, and, in time of action, for small arm men. Where more than one top is placed on a military mast, the lower one carries the machine-guns, and the upper the lookouts and small arm men. Such masts are also fitted with derricks for hoisting torpedo boats, etc., out and in.—Sliding-gunner mast, a small mast fitted for sliding upward on an other mast by means of hoops or rings. It is used principally for boats but formerly served as a skyward mast rigged above a royal mast.—Spencer-mast, a spar attached abaft the foremast or mainmast to receive the rings or hoops of a spencer.—To spend or expend a mast. See *spend*.—Trysail-mast, or spanker-mast, a small mast (similar to a spencer-mast) shaft a lower mast for carrying the hoops to which a try-sail or spanker is bent.

2. One who has another or others under his immediate control, a lord paramount or employer of slaves, vassals, domestic servants, workmen, or laborers, etc., in law, specifically, one who has in his own right and by virtue of contract a legal personal authority over the services of another, such other being called his servant. The important distinction between the relation of master and servant and that of principal and agent lies in the fact that a master is liable to third persons for the errors of his servant to a greater degree than principals generally are for the errors of agents or employees over whom such authority does not exist, and in the fact that a servant has not always the same remedy against his master for injuries suffered in the course of employment as one not a servant might have.

μαστιχῶν, chew: cf. *μαστός*, the mouth (see *mas-taz*, *mustache*), < *μαστόδον*, chew. Hence ult. *mas-ticoid*.] I. n. 1. A resinous substance obtained from the common mastic-tree, *Pistacia Lentiscus*, a small tree about 12 feet high, native in the countries around the Mediterranean. The commercial article is derived principally from the Levant, and especially from the island of Chios. The greater part is obtained from artificial incisions in the bark of the tree. It comes in yellow, brittle, transparent, rounded tears, which soften between the teeth with bitterish taste and aromatic smell. About 90 per cent of mastic is dissolved in alcohol, the residue constituting the substance masticin. Its solution in turpentine constitutes a varnish much used in painting in oil. In the East mastic is chewed by the women.

2. A similar resin yielded by some other plant. Algerian or Barbary mastic is afforded by *Pistacia Terebinthus* (P. *Atlantica*), a tree of the same region as P. *Lentiscus*. In India a mastic is obtained from P. *Khatyube* and P. *Cabuboa*. At the Cape of Good Hope a shrubby composite plant, *Euryops speciosissimus*, called *renu bush* yields a gum which serves as mastic. The Peruvian mastic tree is *Schinus molle*, the West Indian is *Bursera gummiifera*, a lofty tree from all parts of which a resinous gum exudes.

3 A mastic-tree

A line of sandy hills, covered with thickets of myrtle and mastic, shut off the view of the plain and meadows. B. Taylor, *Lands of the Saracen*, p. 43

4. A distilled liquor, most commonly obtained from grapes or grape-skins after the wine is pressed, flavored with the gum mastic and sometimes with anise or fennel, becoming opaline when mixed with water, much drunk in Turkey, Greece, and the islands. The best is made in Chios. — 5. A kind of mortar or cement used for plastering walls. It is composed of finely ground oolitic limestone mixed with sand and litharge, and is used with a considerable portion of linseed oil. It sets hard in a few days, and is much used in works where great expedition is required. — **Asphaltic mastic**. Same as asphalt. — **Bituminous mastic**. See *bituminous cement*, under *bituminous*.

II. a. Adhesive, as or with gum or mastic.

masticate (mas'ti-kāt), v. t.; pret and pp *masticated*, ppr *masticating*. [*L.L. masticatus*, pp of *masticare*, chew (> *It. masticare* = Sp. *masticar*, obs. *mastigar* = Pg. *mastigar* = OF. *mascher*, F. *macher*, chew), orig. chew mastic (not from the ancient and rare Gr. *μαστιχῶν*, gnash the teeth, which is, however, remotely related), < *masticho*, *mastice*, mastic. See *mastic*, n.] 1. To grind with the teeth, and prepare for swallowing and digestion, chew as, to *masticate* food.

Now I eat my meals with pain,
Averse to *masticate* the grain.

Cotton, *Fables*, vi.

2. To prepare for use by cutting or kneading, as with a masticator.

Mr Hancock had a cylinder made of masticated rubber, of a convenient size. Ure, *Diet*, I. 698

mastication (mas-ti-kā'shon), n. [= F. *mastication* = Sp. *masticación* = Pg. *masticação* = It. *masticazione*, < ML. *masticatio* (n.), < L.L. *masticare*, chew. See *masticate*.] 1. The act of chewing, the process of triturating food with the teeth, manducation. — 2. The process of tearing to pieces or kneading, as india-rubber, by means of the masticator. — **Muscles of mastication**, the muscles specially concerned in the act of chewing, being those by whose action the lower jaw is moved upward and sidewise. They constitute a special group of muscles, deriving their innervation from the motor filaments of the trigeminal nerve. In man these muscles are the temporalis, masseter, and external and internal pterygoid.

masticator (mas'ti-kā-tor), n. [= Sp. *masticador*, a horse's bit, = Pg. *masticador* = It. *masticatore*, masticator, < NL. *masticator*, < L.L. *masticare*, chew. See *masticate*.] One who or that which masticates or chews. Specifically — (a) A small kind of mincing machine for cutting up meat for aged persons or others unable to chew properly. (b) A machine used in purifying india-rubber or gutta percha, consisting of a shaft set with strong teeth and revolving in a case in which the material to be purified is placed. (c) In *entom.*, sometimes used for the organs of the mouth employed in mastication — the maxillae and mandibles. Kirby.

masticatory (mas'ti-kā-tō-rī), a. and n. [= F. *masticatoire* = Pr. *masticatori* = Sp. *It. masticatorio*, < NL. *masticatorius*, < L.L. *masticare*, chew: see *masticate*, *masticator*.] I. a. Relating or pertaining to mastication; used in or effected by chewing, as, the *masticatory apparatus* or process. — **Masticatory mouth**, in *entom.*, a mouth provided with well-developed mandibles and maxillae, as in *Coleoptera* and *Hymenoptera*. Also called *mandibulate mouth*. — **Masticatory sac** or *stomach*, a stomach which serves for the trituration and comminution of

food by a process analogous to chewing, as the muscular gizzard of a bird, with its dense, tough, and sometimes bony epithelial lining, or the highly chitinated stomach of a crustacean, with its elaborate set of tooth-like processes.

II. n., pl. *masticatories* (-rīz). A substance chewed to excite the secretion of saliva.

See *marl*.] For the form *mest*, ult. < L. *mest*, cf. *mastin*², *mastin*². This etym. is the only one that satisfactorily explains the various forms involved. Skeat, following Scheler and Diez, supposes *mastiff* to be lit. 'a house-dog', the ML type *mastinus* being in this view contracted (after Rom.) from **mastoninus*, ult. **mansionatus* (sc. *canis*), < *masnata*, ult. **mansionata* (OF. *meisnece*, *maivnee*, etc.), household, family (see *many*², *meny*). Minshew (1925) similarly explains it as 'a mason's tenant, a domum tenens, keeping the house'. A variety of dog of considerable antiquity. A true bred mastiff is of large size, and very stoutly built. The head is well developed and large, the lips deep and pendulous on each side of the mouth, and the whole aspect noble. This animal is capable of great attachment, and is valuable as a watch dog.

In old time was an usage to norryshe grots *mastyns* and rare bytynge dogges in the lytel houses upon the walls, that by them shulde be knowne the comynge of theyre enemyes. Caxton, *Fayt of Armes*, II. 158

mastiver, n. An obsolete form of *mastiff*. Minshew, *Colgrave*.

mastless¹ (mās'tles), a. [*mast*¹ + *-less*.] Having no mast as, a *mastless* vessel.

mastless² (mās'tles), a. [*mast*² + *-less*.] Bearing or producing no mast as a *mastless* beech.

A crown of *mastless* oak adorned his head.

Dryden, *tr. of Virgil's Georgics*, II.

mastlin¹, n. See *mastin*¹.

mastlin², n. See *mastin*².

mastman (mās'tman), n., pl. *mastmen* (-men).

A seaman stationed at a mast in a man-of-war to keep the ropes clear and in order. In the British service, formerly called *captain of the mast*.

mastoccipital (mas-tok-sip'i-tal), a. [*mas-toid* (a) + *occipital*.] Common to the mastoid and the occipital bone as, the *mastoccipital suture*. Also *masto-occipital*.

mastodon (mas'tō-don), n. [NL, so called with ref. to the mammillary processes on the molar teeth, < Gr. *μαστο*, breast (mammilla), + *ὄδων* (*ὄδων*) = E. *tooth*.] 1. An extinct proboscidean quadruped of the family *Elephantidae* and subfamily *Mastodontinae*. Several genera and rather numerous species have been discovered in Tertiary deposits of most parts of the world, in some cases associated with those of the mammoth. One of the largest and best known of these is the American *Mastodon giganteus*, which survived to a late Pleistocene period. A specimen nearly perfect was found in Missouri in 1840. It is now in the British Museum and its dimensions are — extreme length 20 feet 2 inches, height 9 feet 6 inches, cranium, length 9½ feet, width 2 feet 11 inches, tusk, extreme length 7 feet 2 inches, circumference at base 27 inches. See cut on following page.

2. [cap.] The typical genus of *Mastodontinae*, formerly held to include all the mastodons,

now restricted to those of the tetralophodont series, such as *M. avernensis* of Europe

mastodont (mas'tō-dont), *a* and *n* [*< mastodon(-t-)*] *I. a* Having teeth like a mastodon: tubercular, as a mastodont's tooth.

II. n A mastodon

mastodontic (mas-to-don'tik), *a* [*< mastodont + -ic*] Of or pertaining to a mastodon; resembling a mastodon, of mammoth size: as, *mastodontic dimensions* Everett

Mastodontinae (mas'tō-don-tī-nē), *n pl* [NL, *< Mastodon (-odont-) + -inae*] A subfamily of Elephantidae typified by the genus *Mastodon*, distinguished from *Elephantinae* by the character of the molar teeth, mastodonts. The ridges of the molars increase in number by one or more on the successive teeth, and have more or fewer mammilliform

tubercles, while the intervening valleys have little or no cement. Three genera are now recognized, called *Tridactylodon*, *Tetralophodon*, and *Pentalophodon* by Falconer, the second of these terms being a synonym of *Mastodon* proper, and the first being the same as *Tetradactylodon* of Godman

mastodontine (mas-to-don'tin), *a* Of or pertaining to the *Mastodontinae* distinguished from *Elephantinae* in a technical sense

mastodynia (mas-tō-din'i-ē), *n* [NL, *< Gr mastos, the breast, + dymia, pain*] In *pathol*, pain in the mammary gland

mastoid (mas'toid), *a* and *n* [*< (Gr mastoeidēs, like the breast, < mastos, the breast, + eidos, form)*] *I. a* Test-like, shaped like a nipple specifically applied in anatomy to a part or process of the temporal bone, from its shape in man See below **Mastoid artery**, a small branch of the posterior auricular artery, also, a small branch of the occipital artery which enters the mastoid foramen — **Mastoid cells**, a number of irregular spaces or cavities in the substance of the mastoid process of the temporal bone, communicating with one another and with the cavity of the tympanum — **Mastoid foramen** See *foramen* — **Mastoid muscle**, the sternocleidomastoid muscle. — **Mastoid process** of the temporal bone, the mastoid. See cuts 1 and 2 under *skull*

II. n 1 The mastoid part or process of the temporal bone in adult man, a conical nipple-like bony prominence below and behind the orifice of the ear, to which the sternocleidomastoid, trachelomastoid, digastric, and other muscles are attached, and which is grooved for the passage of the occipital artery. It is not a distinct element of the compound temporal bone having no independent center of ossification, but is merely an outgrowth of the petrous bone, forming with this the petromastoid. It is scarcely recognizable in infants. The interior is excavated by the numerous mastoid cells. 2 A distinct bone of the skull of some of the lower vertebrates, regarded by Owen as homologous with the mammalian mastoid

mastoidea, *n* Plural of *mastoideum*

mastoideal (mas-toi'dē-al), *a* [*< mastoideus + -al*] Same as *mastoid*

2 In general, anything that takes fire readily either from a spark or by friction, and is used for retaining, conveying, and communicating fire. Formerly hemp flax cotton, or tow dipped in sulphur coarse paper saturated with niter, a species of dry wood called touchwood, etc., were in common use as *match*es, and for military purposes a slow burning cord was used (See *match cord*, *match lock*, *match tub*). Early in the nineteenth century an improvement was introduced in the form of a thin slip of wood tipped with sulphur or other combustible matter, which ignited when brought into contact with phosphorus contained in a box or vial. All other domestic devices of the kind, however, were superseded by the friction *match*, which was introduced about 1830. See *lockjaw*, *lucifer*, *congreve*, *venetian*, *fuse*, and *vesta*.

Quoted in Capt. John Smith's Works, I 211

Chemical match, a sort of friction match, first manufactured at Vienna, tipped with sulphur and having the end covered with a compound of sugar and chlorate of potash, colored with vermilion and made adhesive with glue. For ignition it was dipped into a vial containing sulphuric acid. Also called *tip match*.

Inflammatory match. See *incendary* — **Quick-match**, a *match* made with threads of cotton or with cotton wick, steeped in gummed brandy or whiskey, then soaked in a paste of meal powder and gummed spirits, and afterward strewed with meal powder. It burns at the rate of a yard in 18 seconds, and is used to prime heavy mortars, etc. — **Safety-match**, a kind of *match* which will not ignite by friction unless rubbed on a specially prepared surface, as the side of a box, containing the phosphorus or other necessary part of the combustible composition. **Slow-match**, a *match* made to burn very slowly as at the rate of 4 or 5 inches an hour, and used for blasting purposes, artillery, etc., and formerly for firing the matchlock. — **To prime a match**, to render it easily ignitable by putting on the end of it some wet bruised powder made into a sort of paste.

I saw when at his word the formless mass,

This world's material mould, came to a heap

Milton, P. L., III, 709

The motion of the ether communicated to material substances throws them into motion. It is therefore itself a material substance. Tyndall, Light and Electricity, p. 124

2 Relating to or connected with matter, concerned with organic nature, affecting corporeal things or interests as, material existence or well-being

Even in that material civilization which utilitarianism delights to glorify, there is an element which the philosophy of mere enjoyment cannot explain

Locky, Europ. Morals, I, 89

Material circumstances will continue to rule political agglomerations. The Nation, XLII, 155

Hence - **3** Corporeal, sensuous, sensual, gross as, material delights

These temptations are crasse and material, and soon discernible

Spenser, F. Q., II, x, 74

He (the King of Spain) had done them some material good offices.

Howell, Letters, I, vi, 4

How we all came to disregard so material a point is in conceivable

Goldsmith, Vicar, xvi

A circumstance may be said to be material when it bears a visible relation in point of causality to the consequences, immaterial, when it bears no such visible relation

Bentham, Intro. to Morals and Legislation, vii, 23

She repeated to my friend the singular story she had before told him, without any material variation from the detail she had formerly given

Barham, Ingoldsby Legends, I, 203

5, Full of matter, or of solid sense and observation.

Touch. Honesty coupled to beauty is to have honey a sauce to sugar

Jaques, A material fool! [Aside]

Shak., As You Like It, III, 3, 32

Beware of being too material when there is any impediment or obstruction in men's wills, for pre-occupation of mind ever requirereth preface of speech

Bacon, Dispatch (ed 1887)

What thinks material Horace of his learning?

B. Jonson, Poetaster, v, 1

Natural and easy as well in her deportment as in her discourse, which was always material, not trifling

Keelyn, Diary, March 10, 1685

6. In *philos.*, consisting in or pertaining to matter in the Aristotelian sense, and not to form, arising from matter of positive fact, and not from logical implication; referring to the object as it exists, and not to distinctions originating in the mind, relating to a word as an object, and

not to its meaning. All these senses come down from the middle ages, and in them *material* is opposed to *formal*. In Cartesian and later writings, *material* often means pertaining to the outward world, as opposed to *spiritual* in the Kantian terminology, *material* means pertaining to or derived from matter in the Kantian sense of that term, namely, that which is contributed to cognition by sense. Examples of the many established phrases in which this word occurs are given below

7 In the law of evidence, of legal significance in the cause, having such a relation to the question in controversy that it may or ought to have some influence on the determination of the cause. See *immaterial issue*, under *issue* - **Material acceptance or supposition**, the taking of a spoken or written word as an object of thought - **Material being**. See *being* - **Material cause**. See *cause*, **1**

Material cognition. See *cognition* - **Material consequence**, a consequence, or premise with conclusion, which is valid - that is, of which the conclusion is true whenever the premise is true, but which is so by virtue of a matter of fact and not by virtue of the logical forms of the premise and conclusion. The use of this term originated with Scotus, who further distinguished between a necessary and a contingent material consequence, according as the premise needed to be supplied to render the consequence a logical syllogism is a necessary or a contingent proposition - **Material criterion of truth**. See *criterion* - **Material descent**, the passage from a genus to a species which comes under it as a matter of fact, but not by logical necessity - **Material distinction**, the distinction between different individuals of the same species. This is an example of a use of the word *material* common with Thomas Aquinas and his followers, which seems to imply that matter is the principle of individuation - **Material fallacy**, a fallacy in which the syllogism satisfies all the rules of formal logic, but where the deduction belongs to a class of falsifications of premises. Such, for example, are cases where "most" is aggregated into "all" where we argue *post hoc ergo propter hoc*, etc. - **Material form**, in *metaph.*, a form depending upon matter, and having no independent existence, which is supposed to be true of every form except the human soul - **Material heresy**. See *heresy*, **2** - **Material idea**. See *idea* - **Material knowledge**. Same as *material cognition* - **Material logic**. See *logic* - **Material matter of a proposition**, the subject and predicate opposed to the *formal matter*, which is the fact signified by the proposition - **Material mode**, a mode which affects the matter of a proposition opposed to *formal mode* which affects the form

The material modes affect the matter of the enunciation, viz. (either the subject or the predicate. For example, in this enunciation: A good shepherd lays down his life for his sheep, the word *bonus* or *good* is the mode of the subject. In this, A rhetorician speaks ornately and copiously, ornately and copiously are the modes of the predicate

Burgesdictus, II, by a Gentleman

Material multitude, the plurality of a number in which the distinctions which may separate the objects are left out of view. It is a Thomist expression - **Material object of a science**, the things of which that science takes cognizance regardless of the point of view from which it considers them. Thus chemistry and mechanics have the same material object - that is to say, the whole universe - **Material opposition**, the opposition between terms which are not opposed in form - **Material perfection of cognition**, a perfect acquaintance with the facts, as opposed to a logically distinct apprehension of them - **Material principle**, the Aristotelian matter. See *matter*, **2** (a) - **Material science**, a science which rests on outward observation, and not on introspection, a Cartesian distinction - **Material sign**, a sign which indicates its object, and shows its real existence, but does not represent it, or exhibit its form - a Thomist phrase - **Material substance**, matter in the ordinary sense - **Material supposition**. Same as *material acceptance* - **Material truth**, the correspondence of our judgments with their objects, opposed to *formal truth*, which is mere logical consistency - **Material unity**, that which belongs to an individual as such - a Thomist term - **Material virtue**, a power residing in material things. *Aquinas*

II, *n* **1** Component or contributory matter or substance, that of or with which any corporeal thing is or may be constituted, made, or done as, the materials of the soil or of disintegrated rocks - wool is the material of cloth, building- or writing-materials, war-material

The houses are all built, on the outside, of no better a material than either Sun burnt brick or Flemish Wall

Maundrell, Aleppo to Jerusalem, p. 124

The scenery though for ever changing, changes like the pattern of a kaleidoscope, the same materials used

justed in varying combinations. Proude, Sketches, p. 64

2 A constituent principle or element, that which composes or makes a part of anything.

as, the material of one's thoughts, the materials of a drama

Concerning the materials of seditions

Bacon, Seditions and Troubles

Let none fear that this age, or any coming one, will extirpate the material of poetry

Gladstone, Might of Right, p. 121

Raw material, unmanufactured material for fabrication in its natural state, or, with reference to some processes of manufacture, in the partially manufactured state to which it must be brought prior to treatment by those processes. Thus wool is the raw material of yarn, and yarn that of cloth. Iron ore is the raw material of pig iron, and pig iron that of cast iron

The currier and tanner find their whole occupation in converting raw material into what may be termed prepared material

J S Mill

Strength of materials, that power by which any substance as a rod, bar, beam, chain, or rope, resists any effort to destroy the cohesion of its parts, whether by pulling or stretching, crushing, or lateral or longitudinal pressure

material (mā-tē'ri-al), *v. t.* [*< material, n.*] To render material, materialize.

I believe that the whole frame of a beast doth perish and is left in the same state after death as before it was materialized into life. *Sir T. Browne, Religio Medici, § 87*

materialisation, materialise. See **materialization, materialize**.

materialism (mā-tē'ri-al-izm), *n.* [First used in E. = F. *matérialisme* = Sp. Pg. *It. materialismo*, as *material* + *-ism*] 1 The denial of the existence in man of an immaterial substance, which alone is conscious, distinct and separable from the body — 2 The metaphysical doctrine that matter is the only substance, and that matter and its motions constitute the universe. See *idealism*, 1

Philosophical *materialism* holds that matter and the motions of matter make up the sum total of existence, and that what we know as psychical phenomena in man and other animals are to be interpreted in an ultimate analysis as simply the peculiar aspect which is assumed by certain enormously complicated motions of matter. *J. Fiske, Evolutionist, p. 277*

3 The doctrine that all phenomena are to be accounted for by the fortuitous concourse of atoms, in connection with certain laws or tendencies toward laws, in nature, Epicureanism — 4 Any opinion or tendency that is based upon purely material interests, hence, any low view of life, devotion to material things or interests, neglect of spiritual for physical needs and considerations

Criticism is infected with a cant of *materialism*, which assumes that manual skill and activity is the first merit of all men, and disparages such as say and do not. *Emerson, The Poet*

There is a Lower Life, of which the animating principle is secularity, or — in the popular sense of the word — *materialism*. *J. H. Seeley, Nat. Religion, p. 225*

materialist (mā-tē'ri-al-ist), *n.* and *a.* [= F. *matérialiste* = Sp. Pg. *It. materialista*, as *material* + *-ist*] 1. *n.* 1 One who holds or advocates any form of metaphysical materialism

He who denies spirit in man or in the universe is a perfect *materialist*. *Fleming, Vocab. of Philos.*

2. One who is absorbed by material interests, one who takes a low, material view of life

Persons who worship nothing but worldly success, who care for nothing but wealth, or fashionable display, or personal celebrity, or sensual gratification, are thus loosely called *materialists*. *J. Fiske, Cosmic Philos., II 438*

II. a. Of or pertaining to materialism, materialistic

The *materialist* view is quite as imperfect as the spiritualist view. *G. H. Lewes, Hist. Philos., II 768*

materialistic (mā-tē'ri-al-ist'ik), *a.* [*< materialist* + *-ic*] Pertaining to, of the nature to, or characterized by materialism, in any sense of that word

But to me his very spiritualism seemed more *materialistic* than his physics. *Emerson*

materialistical (mā-tē'ri-al-ist'ikal), *a.* [*< materialist* + *-al*] Same as *materialistic*

materiality (mā-tē'ri-al'i-ti), *n.* [= F. *matérialité* = Sp. *materialidad* = Pg. *materialidade* = It. *materialità*, < NL. **materialitas* (-s), < LL. *materialis*, material see *material*] 1 The state or condition of being material, physical constitution or organization, corporeity as, the old belief in the *materiality* of heat

Nor had compacted earth, nor rock, nor stone,
Nor gross *materiality* been known
Byron, Lullaby to a Gentleman in the Temple

There has arisen the conception of a deity who at first human in all things, has been gradually losing human *materiality*. *H. Spencer, Univ. Prog., p. 70*

2 A material thing, material substance

Sufficient is it to remember for the present that the soul is a subtler and more refined *materiality*, which is thus endowed with more delicate and refined perceptions than the bodily organs. *W. Wallace, Epicureanism, p. 102*

3. Material character, coarseness, grossness
In polygamous families the children cannot avoid suffering from the general debasement and *materiality* of life. *S. Bowles, Our New West, p. 248*

4 The perception of material substance by the mind, that factor in cognition which is recognized as material

It is of more than psychological interest to remark how the primordial factor in *materiality* is thus due to the projection of a subjectively determined reaction to that action of a not self on which sense impressions depend as an action of the not self which, of course, is not known as such till this projection of the subjective reaction has taken place. *J. Ward, Encyc. Brit., XX 56*

5 The quality of being material, importance, essentiality as, the *materiality* of testimony

Now *materiality* is a relative term applied to the consequences of an act, it bore relation to pain and pleasure

applied to the circumstances, it bears relation to the consequences.

Bentham, Introd. to Morals and Legislation, vii 23.

materialization (mā-tē'ri-al-izā'shon), *n.* [*< materialize* + *-ation*] The act of materializing or of investing with or assuming a material form, change from a spiritual, ideal, or imaginary state to a state of matter; specifically, among spiritualists, the alleged assumption by a spirit of a material or bodily form. Also spelled *materialisation*

materialize (mā-tē'ri-al-iz), *v.*; pret. and pp. *materialized*, ppr. *materializing* [= F. *matérialiser* = It. *materializzare*, as *material* + *-ize*] **I. trans.** 1 To give a material form or bodily existence to, make physically perceptible, embody in any manner. See **II**

By this means [letters] we *materialize* our ideas, and make them as lasting as the ink and paper, their vehicles. *Guardian, No. 172*

With wonderful art and beauty [Virgil has] *materialized* (if I may so call it) a scheme of abstracted notions and clothed the most nice, refined conceptions of philosophy in sensible images and poetical representations. *Tatler, No. 115*

He regarded the suggestion that the letter he described as "*materialized*, or reintegrated in the ash" was an out come of any concealed apparatus as "grotesquely absurd." *R. H. Huxton, Proc. Soc. Psych. Research, III 262*

2 To give the character of metaphysical materialism to, render materialistic

The *materializing* tendencies of the former system. *Núman, Hist. Latin Christianity, viii 5*

3 To reduce to a material basis or standard, treat as pertaining only to matter, give a material character to, make material, low, coarse, sensual, etc. as, to *materialize* thought, morality, or mythology, to *materialize* one's ideas or enjoyments

II. intrans. 1 To become material, assume a material form, in recent spiritualistic use, to assume, as a spirit or immaterial entity, a form which is perceptible by the senses, or one that is visible, tangible, and (in the case of supposed spirits) capable of physical exertion

But, setting aside all chicanery, there is an overwhelming amount of evidence from people who are preeminently truthful to the effect that they have actually seen persons and things *materialize*, as the phrase goes, out of nothing. *N. A. Rev., CXLVII 704*

2 To take form or shape; come into perceptible existence, become real as, the project has not yet *materialized*. [Colloq.]

The hall of the intruders was regarded as a challenge by some fifteen or twenty hounds that suddenly *materialized* among the bee hives and the althea bushes. *M. N. Murfree, Prophet of the Great Smoky Mountains*

Also spelled *materialahs*

materially (mā-tē'ri-al-i), *adv.* 1 With, in, by, or with reference to matter or material things, from a material point of view, physically as, to be well provided *materially*, the state of the country *materially* considered — 2 As regards matter or substance, not formally, in itself considered

An ill intention is certainly sufficient to spoil and corrupt an act in itself *materially* good. *South*

3 In a material manner, to an important extent or degree, essentially

It conducted *materially* to the security of good order. *Hallam, Middle Ages, viii 2*

materialness (mā-tē'ri-al-nes), *n.* The state or quality of being material; importance; essentiality

materia medica (mā-tē'ri-ā med'i-kā) [ML. NL., medical material: *materia*, material, matter, *medica* fem. of *medicus*, medical see *medical*, *medicinal*] 1 Medicinal agencies collectively; the various remedial substances employed in medicine — 2 That branch of medical science which treats of the various substances, natural and artificial, which are employed in the practice of medicine, and embraces an explanation of their nature and modes of action

materialian (mā-tē'ri-ān), *n.* [*< LL. materialianus*, believing in the eternity of matter, < L. *materia*, matter see *matter* and *-arian*] A materialist. *Cudworth*

materialist (mā-tē'ri-āt), *a.* and *n.* [*< L. materialius*, taken, not as pp. of *materialare*, build of wood, but as a mere adj., made of matter, < *materia*, matter: see *material*, *matter*.] **I. a.** 1 Consisting of matter, material.

Gold, the most ponderous and *material* amongst metals. *Bacon, Nat. Hist., § 826*

2 In *metaph.*, united with matter, embodied in matter. said of an Aristotelian form.

II. n. A material substance; a thing formed of matter.

materialion (mā-tē'ri-ā'shon), *n.* [Of L. *materialio* (-n-), woodwork, < *materialare*, build of wood, *materialari*, procure wood: see *materialare*] 1 A selling of timber for building. *Bailey, 1731* — 2. In *metaph.*, a making real by embodying in matter or visible form

'Creation, that is, a production of all things out of nothing, a formation not only of matter but of form, and a *materialion* even of matter itself.

Sir T. Browne, Vulg. Err., v 1

materialure (mā-tē'ri-ā-tūr), *n.* [*< materialare* + *-ure*] Materialization, the production by the soul of the matter of the body. *J. H. Stirling*

matériel (mā-tē'ri-el'), *n.* [F. see *material*, *n.*] The assemblage or totality of things used or needed in carrying on any complex business or operation, in distinction from the personnel, or body of persons, employed in the same applied more especially to military supplies and equipments, as arms, ammunition, baggage, provisions, horses, wagons, etc.

materies (mā-tē'ri-ēz), *n.* [L. see *matter*] In some technical uses, material a material; a matter or substance composing or peculiar to anything, or considered as an operative or causative agency as, *materius morbi* (something regarded as the immediate cause of disease)

matériau (mā-tē'ri-us), *a.* [*< LL. materiosus*, full of matter (wood?), < L. *materia*, matter, wood see *matter*] Same as *material*. *Milton*

maternal (mā-tēr-nal), *a.* [= F. *maternel* = Pr. Sp. Pg. *maternal* = It. *maternale*, < L. *maternus*, of a mother, < *mater*, mother: see *mater*, *mother*] 1 Pertaining to a mother or to motherhood; proper to a mother, motherly as, *maternal* love or authority, *maternal* pains or cares

Ah, that *maternal* smile!
Cousin, On the Receipt of my Mother's Picture
We smile to see our little ones at play
So grave, so thoughtful, with *maternal* care
Nursing the welps of rags they call their babes.
O. W. Holmes, Idols

2 Relating to or consisting of mothers; concerning the state of motherhood as, a *maternal* association, a *maternal* hospital — 3 Coming from or through a mother, imparted by or connected with one's mother as, a *maternal* inheritance, a *maternal* uncle or cousin, *maternal* ancestry or lineage

That part alone of gross *maternal* frame
Fire shall devour. *Gay, Apotheosis of Hercules*
'Tlive is driven over the downs to Brighton, to his *maternal* aunt there. *Thackeray, Newcomes, v*

I. a Same as *mathematical* [Rare.]
Sir, not only a *mathematic* point, which is the most in divisible and unique thing which art can present, flows into every line which is derived from the centre, but our soul, which is but one, hath swallowed up a negative and feeling soul.
Donne, *Letters*, xxi

Solving problems *mathematic*.

Byron, *Granta*.

II n Same as *mathematics* [Rare.]

All pure *mathematic* is thus a science of pure intuition
Hickok, *Mental Philos*, p. 125

mathematical (math-ē-mat'ik-al), *a* and *n.* [*< mathematic + -al*] **I. a** 1 Of, pertaining to, or relating to mathematics, having to do with pure quantity, quantitative as, *mathematical* knowledge, *mathematical* instruments, a *mathematical* theory.

That Egyptian and Chaldean wisdom *mathematical* wherewith Moses and Daniel were furnished
Hooker, *Eccles. Polity*, iii. 8.

The greater or less accuracy attainable in a *mathematical* science is a matter of accident
Jeans, *Phil. Econ*, p. 7

The first or *mathematical* class of categories, the categories of quantity or quality.

E. Caird, *Philos. of Kant*, p. 316

2 According to the principles of mathematics, theoretically precise, absolutely accurate, strict, rigid, demonstrable as, *mathematical* exactness, *mathematical* certainty.

Every single argument should be managed as a *mathematical* demonstration.

Locke, *Conduct of the Understanding*, § 7

3† Geometrical, as opposed to *arithmetical* and *algebraical*—an incorrect use, formerly current.

Arithmetical, *mathematical*, algebraical, and paradoxical questions
R. Cartes (1794), title of book

4† Astrological, magical.

Though I do by the authority of God's laws and man's laws damn this damnable art *mathematical*, I do not damn such other arts and sciences as be associated and annexed with this unlawful astrology
Sp. Hooper, *Works*, I. 380

5 Produced by mathematics, as pure figures and number.

A marvellous newtrality have these things *mathematical*, and also a strange participation between things supernatural, immortal, intellectual—simple and indivisible, and things natural, mortal, sensible, compounded and divisible.
Dr J. Dea, Preface to *Euclid* (1670)

Mathematical abstraction. See *abstraction*.—**Mathematical body**, a volume of pure space, without inertia and the other properties of natural bodies. See *body*.—**Mathematical certainty or evidence**, that sort of certainty which results from mathematical demonstration, based on a diagram or the like.—**Mathematical chronology**. See *chronology*.—**Mathematical conception**, a conception which is applicable immediately to space and time, and not to existence or causation, a conception that is not dynamical.—**Mathematical induction**. See *induction*.—**Mathematical infinity**, that sort of infinity which is considered in mathematics. mathematics (math-ē-mat'iks), *n.* [*Pl. of mathematic + -ics* Cf. *mathematic*, *n.*] The science of quantity, the study of ideal constructions (often applicable to real problems), and the discovery thereby of relations between the parts of these constructions, before unknown. The observations being upon objects of imagination merely, the discoveries of mathematics are susceptible of being rendered quite certain. The first considerable advances in mathematics were made by the Greeks, whose greatest geometers, Euclid, Archimedes, and Apollonius flourished in or about the third century B. C. After their time not very much progress was made until the seventeenth century, but since then the progress of discovery has been continuous. See *absolute*, *algebra*, *arithmetic*, *equation*, *function*, *geometry*, *group*, *infinite*, *infinitesimal*, *number*, *problem*, *quantity*, *space*, *theorem*, etc.

To the pure *mathematics* are those sciences belonging which handle quantity determinate.

Baron, *Advancement of Learning*, II. 171

I have mentioned *mathematics* as a way to settle in the mind an habit of reasoning closely and in train.

Locke, *Conduct of the Understanding*, § 7

Mathematics is the science which draws necessary conclusions.
B. Peirce, *Linear Associative Algebra* (1870), § 1

Now this establishment of correspondence between two aggregates and investigation of the properties that are carried over by the correspondence may be called the central idea of modern *mathematics*.

W. K. Clifford, *Philos. Pure Sciences*, p. 334

Applied mathematics, the mathematical study of a series of problems the connection of which is objectively opposed to *pure mathematics*, which studies systems of relation; the connection lying in the analogy of the relationship. Examples of applied mathematics are rigid dynamics, hydrodynamics, the theory of probabilities, the kinetical theory of gases, etc.—**Higher mathematics**, all the scientifically treated branches of mathematics—that is, all except practical arithmetic, elementary geometry, trigonometry, and a part of algebra.

mathemeg (math-ē-meg), *n.* [Said to be Cree Indian, meaning 'ugly'] A fish of the Saskatchewan basin, believed to be the silurid *Amuriscus nigricans*, a kind of catfish.

mathesis (ma-thē'sis), *n.* [LL, learning, mathematics, *< Gr. μάθησις*, learning, knowledge, science, *< μαθηματιν, μαθητιν*, learn see *mathematics*] 1 Mental discipline, learning or science in general, especially mathematics [Obsolete or archaic.]

Mad *Mathesis* alone was unconfined,
Too mad for mere material chains to bind,
Now to pure space lifts her ecstatic stare,
Now, running round the circle, finds its square.
Pope, *Dunciad*, iv. 81

2 [cap.] In *entom.*, a genus of clerid beetles, erected by Waterhouse in 1877, having a long antennal club and the third tarsal joint not bilobed. The type is *M. guttigera* of New Zealand resembling the longicorn *Zorion guttigera*, with which it is associated, and upon which it is probably parasitic.

mathesy†, *n.* [*< LL. mathesis*, learning see *mathesis*] 1 *Mathesis*, mathematics.

Anon after he set up a great school at Canterbury of al manner of sciences, as rhetoric logic, philosophy, *mathesy*, astrology, geometry, arithmeticke, and musike.
Rp. Bale, *English Votaries*, I.

mathook† (mat'huk), *n.* In *hydraulic* engine, a long pole with an iron hook at the end, used in making and handling mats for jetty-work.

Eyes and libels served as spades and *mathooks* to work with.
Roger North, *Examen*, p. 502

mathook†, *n.* A falsified form of *matlock*.

Mathurin (math'ū-rin), *n.* [So called as occupying the church of St. Mathurin in Paris.] A member of the order of Trinitarians. See *Trinitarian*, 2.

mati (mā'tē), *n.* [Chin., *< ma*, horse, + *tē*, foot.] A sedge, *Eleocharis tuberosa*, growing in China, with wholesome edible tubers.

matias bark. Same as *malambo bark* (which see, under *bark*.)

maticin, maticine (mat'is-in), *n.* [*< maticol + -ine*, *-m2*] A bitter principle obtained from the plant *maticeo*.

matico† (ma-tē'kō), *n.* [Sp.] A plant, *Piper angustifolium* (*A. latifolia elongata*), natural order Piperaceae. In Peru it has long enjoyed a high reputation for styptic and aphrodisiac properties. It is an aromatic tonic and stimulant and acts like cubeba on the urinary passages. A species of *Rapatorium* (*E. glutinosum*) has the same name.

matico† (mat'is-kō), *n.* Same as *maticeo*.

matie (ma'ti), *n.* [Origin uncertain.] A fresh herring in which the liver or roe is perfectly but not largely developed. This is the state in which the fish are in the best condition for food being most delicious as well as most nutritive. Although they are not so bulky in appearance as full herring, they are in reality much fatter. See *full herring*, under *herring*.

matin (ma'tin), *n.* and *a.* [*< ME. matin* (in pl. *matyns*), *< OF. and F. matin* (= *It. mattino*), morning (*matins*, morning prayers), *< L. matutinum*, the morning, neut. of *matutinus*, of the morning, *< Matuta*, the goddess of dawn, as if fem. of an adj. **matutus*, early, timely (?), akin to *maturos*, mature see *mature* (cf. *matutine*.)]

I n 1† Morning.

The glow worm shows the *matin* to be near,
And glows to pale his uneffective fire.
Shak., *Hamlet*, I. 5. 80

2 pl One of the canonical hours appointed in the early church, and still observed in the Roman Catholic Church, especially in monastic orders. It properly begins at midnight, and is occupied by two services, nocturns and lauds. The name is also applied to the service itself which includes the Lord's Prayer, the Angelic Salutation, the Creed, and several psalms.

The vigils are celebrated before them, and the nocturn and *matins*, for the saints whose the relics are.

Stillingfleet

3 Morning worship, as sung, hence, any morning song—usually in the plural.

He ne hurde masse & *matyns* and curson & eche tyde
Rob. of Gloucester, p. 309

And crop full out of doors he flings,
Kre the first cock his *matin* tinge.
Milton, *I. Allegro*, I. 114

4 pl A musical setting of any part of the office of *matins*.

II a Pertaining to the morning, used in the morning [Poetical.]

Up rose the victor angels, and to arms
The *matin* trumpet sang.
Milton, *P. L.*, vi. 520.

Each morn my sleep was broken thro
By some wild skylark's *matin* song.
Tennyson, *Miller's Daughter*

matinal (mat'inal), *a.* [*< F. matinal*, *< LL. matutinalis*, of the morning, *< L. matutinus*, of the morning see *matin* (cf. *matutinal*)]

1 Relating to the morning, or to *matins*—2, [cap.] Appellative of the second of Professor H. D. Rogers's fifteen subdivisions of the Paleozoic strata in the Appalachian chain, the names of which suggest metaphorically the different natural periods of the day. It represents Nos. II and III of the numerical divisions of the Paleozoic series according to the previous nomenclature of the Pennsylvania Survey, viz. the Matinal limestone and the Matinal shales and slates, the equivalent of the groups included between the Potsdam sandstone and the Oneida conglomerate according to the nomenclature of the New York Survey.

matinée (ma-tē'nā'), *n.* [*F.*, *< matin*, morning see *matin*] 1 An entertainment (especially a theatrical performance) or a reception held in the daytime, usually in the afternoon. [The general dinner hour of early times having been at the close of the forenoon, the French *matinée*, like the English morning is often considered as extending to the common modern dinner hour in the evening especially in cities.]

2 A woman's dress for home wear in the forenoon, or up to the time when she dresses as for dinner or for going out. Its form and material change according to fashion.

A becoming *matinee* is of larret flannel. Many pretty *matinees* are made of sarah.
Philadelphia Times, March 14, 1880

mating (mā'ting), *n.* [Verbal *n.* of *mate*, 1, *v.*] 1 The act of taking a mate, or pairing, as by birds—2 See the quotation.

Sometimes two or more crews belonging to different vessels unite in the capture, and if successful an equitable division of the oil is afterward made. This is called *matiny*.
Fisheries of U. S., v. II. 259

mating-time (mā'ting-tim), *n.* The breeding season, when any animal mates or pairs, pairing-time.

matire, *n* A Middle English form of *matter*.
matlockite (mat'lok-it), *n* [*< Matlock* (see *def.*) + *-ite*²] A native oxychloride of lead, occurring near Matlock in Derbyshire, England, in tetragonal crystals of a yellowish color and adamantine luster.

matpole (mat'pōl), *n* In *hydraul. engin.*, a pole, usually about 20 feet long and 3 inches thick, smoothed and pointed with iron, used in placing mats for shore-protection, etc.

matral (mā'trāl), *n* [*< L. matralis*, pertaining to a mother, *< mater*, mother see *mater*², *mother*¹] In *anat.*, pertaining to one of the membranes enveloping the brain, as the dura mater or pia mater in composition.

Between the pia *matral* and the arachnoid sheath

H. Gray, Anat. (ed 1887), p. 805

Matralia (mā-tra'h-ā), *n pl* [*L.*, neut. pl. of *matralis*, pertaining to a mother see *matral*] In ancient Rome, an annual festival celebrated on the eleventh of June, by the citizen matrons only, in honor of the goddess Mater Matuta. The festival inculcated the principle that mothers should care not only for their own but for their sister children.

matrast, *n* [*OF* see *matras*] A cross-bow-bolt. Compare *evancum*, *quarrel*, *bol*.

matrass (mat'ras), *n* [*< F. matras*, a chemical vessel so called from its long straight narrow neck, *< OF. matras* = *Pr. matral*, an arrow, a javelin, *< L. matra*, *matras*, *mater*, *madaris*, a Celtic javelin, a pike a word of Celtic origin] 1 A chemical vessel with a round or oval body and a long neck open at the top, serving the purposes of digestion, evaporation, etc., a cucurbit. Also called *bolthead* — 2†, In *hort.*, a flask-like glass employed to shelter plants or flowers from the weather or from extremes of cold and heat.

Protect from violent storms and the too parching darts of the sun, your pennant bell tulips and ranunculuses, covering them with *matrasses*. *Evelyn, Calendarium Hortense*

matres, *n* Plural of *mater*².

matress, *n*. An obsolete form of *matress*.

matrarch (mā'trārk), *n* [*< L. mater*, *< Gr. μήτηρ*, mother, + *αρχή*, a leader, ruler, *< ἀρχή*, rule] 1 The wife of a patriarch. [Rare]

Dr. Southey has classed this injured *Matrarch* (Job's wife) in a triad with Xanthippe and Mrs. Wenley. *Southey, The Doctor, cxvii (Dames)*

2 A woman who holds (to some extent or in some respect) in a family or tribe a position analogous to that of a patriarch. See *matrarchy*.

matrarchal (mā'trārk'al), *a* [*< matrarch* + *-al*] Of or pertaining to a matrarch or to matrarchy, relating to the superior importance of mothers (in certain respects, as the reckoning of descent) in a family, clan, or tribe, characterized by matrarchy.

The Indian tribes farther south are largely *matrarchal*, reckoning descent not on the father but the mother's side. *E. B. Tylor, Pop. Sci. Mo., XXVI*

Here the *matrarchal* system is still in existence -- the eldest daughter inherits all. *Fortnightly Rev., N. S., XI, 214*

matrarchalism (mā'trārk'al-izm), *n* [*< matrarchal* + *-ism*] The character of being matrarchal, matrarchal customs or practices, matrarchy.

This immense district represents an area of lower culture, where *matrarchalism* has only in places yielded to the patriarchal system. *E. B. Tylor, Pop. Sci. Mo., XXVI, 162*

matrarchate (mā'trārk'at), *n* [*< matrarch* + *-ate*³] The position or power of a matrarch.

Women were at first considered like other properties, and in the communist stage they used to belong to each and all, when property was divided, women were assimilated to landed proprietors or estates, and the children took the name of their mother as in feudal countries they took that of their estate. This is really the origin of the so-called *matrarchate*, in which the mother had, in fact, no power, but gave her name to her child. *Jour. Anthrop. Inst., XVIII, 271*

matrarchy (mā'trārk-ē), *n* [*< L. mater*, *< Gr. μήτηρ*, mother, + *αρχή*, rule see *matrarch*] Government by a mother or by mothers, specifically, an order of society, as in certain primitive tribes in which the mother in certain important respects, especially in line of descent and inheritance, takes precedence of the father, descent or inheritance in the female line.

The ancient Slavonians had no prejudice against *matrarchy*. *Quarterly Rev., CLXII, 190*

Matricaria (mat-ri-kā'ri-ā), *n* [*NL* (Tournefort, 1700), so called with ref. to the supposed medicinal value of some of the species, *< L. matric-* (*matric-*), womb see *matr*] A

genus of plants of the natural order *Compositae* and the tribe *Anthemideae*. It is characterized by radiate heads, with an involucre of rather broad bracts, by achenia with from 8 to 5 ribs on the inner face and none on the back, and by a receptacle which is often conical or oblong. They are herbs, with alternate leaves, which are two or three times pinnatifid, with linear or thread-like divisions, and small or medium sized heads, which are usually solitary at the tips of the branches, and have white ray flowers and yellow disk flowers. There are about 23 species, found in Europe, North America, the northern part of Asia, and northern and southern Africa. *M. chamomilla* called *wild* or *German chamomile*, is a common annual of Europe, in appearance strongly resembling the common mayweed *M. snodgrassii*, also European, is a scintless species, which, like the former, is sparingly naturalized in the United States. *M. discolor*, with rays as heads is spreading from western America eastward, and is naturalized in northern Europe. *M. glaberrima*, of South Africa, affords a good substitute for *chamomile*.

Flowering Plant of *Matricaria inodora*
a ray flower, *b* disk flower, *c* achenium

matricet (mā'tris), *n* [*< F. matrice* = *Sp. Pg. matriz* = *It. matrice*, *< L. matrica*, the womb see *matr*] Same as *matr*.

matrices, *n* Plural of *matr*.

matricidal (mat'ri-sī-dl), *a* [*< matricide* + *-al*] Of or pertaining to matricide, or a person guilty of matricide.

As when one fair land
 Saw, North and South, her bright armed myriads stand,
 Saw herself rent in twain by *matricidal* hand.
Palgrave, N. A. Rev., CXX, 440

matricide¹ (mat'ri-sīd), *n* [= *F. matricide* = *Sp. Pg. It. matricida*, *< L. matricida*, the killer of his mother, *< mater*, mother, + *-cida*, *< cadere*, kill] One who kills his or her mother.

matricide² (mat'ri-sīd), *n* [= *F. matricide*, *< L. matricidium*, the killing of one's mother, *< mater*, mother, + *-cidium*, *< cadere*, kill] The killing or murder of one's mother.

Thy *Matricide* all pardon must extend.
J. Beaumont, Psycho, v. 17

matricula (ma-trik'ū-lā), *n*, pl *matricula* (-lō) [= *F. matricula* = *Sp. matricula* = *Pg. matricula* = *It. matricula*, *< L. matricula*, dim. of *matr* (*matr*-), a public register see *matr*] A roll or register. Specifically - (a) The register or roll of a university.

His name or ours not in the *matricula*.
Wood, Athenae Oxon.

(b) In the *Rom. Cath. Ch.*, the roll containing the names of the clergy permanently attached to a cathedral, a collegiate, or a parish church.

matriculant (mā-trik'ū-lant), *n* [*< ML. matriculan(t)-s*, pp. of *matriculare*, register see *matriculate*] A candidate for matriculation, one who applies for enrolment among the members of a body, as a student in a college or university, an entrant.

They are ready to favor the demand upon *matriculants* for a preliminary qualification. *The American, V, 390*

matriculate (ma-trik'ū-lāt), *t*, *v*, pret and pp *matriculated*, ppr *matriculating* [*< ML. matriculatus*, pp. of *matriculare* (*> It. matricolare* = *Sp. Pg. matricular*), register, enroll, *< LL. matricula*, a public register, roll, list, dim. of *matr*, a public register see *matricula*, *matr*.] *I trans.* To enter in a register; register, enroll, especially, to enter or admit to membership in a body or society, particularly in a college or university, by enrolling one's name in a register.

It was their obstinacy to incorporate their errors into their creeds, and to *matriculate* their abuses among their sacred rites.
Abp. Bramhall, Works, II, 206, quoted in Wordsworth's Church of Ireland, II, 221

Frederick was, accordingly, at the proper age, *matriculated* at Oxford. *Barham, Ingoldsby Legends, I, 170*

II. intrans. To become a member of any body or society, especially a college or university, by having one's name entered in a register.

The Browns have become illustrious by the pen of Thackeray and the pencil of Doyle, within the memory of the young gentlemen who are now *matriculating* at the universities. *T. Hughes, Tom Brown at Rugby, I, 1*

matriculate (mā-trik'ū-lāt), *a* and *n* [*< ML. matriculatus*, pp. see the verb] *I. a* Matriculated, admitted, enrolled.

To be *matriculate* with ladies of estate.
Shelton, Garland of Laurell.

II. n. One who has been admitted to membership of a body, as a college or university, by enrolment in its register.

Suffer me in the name of the *matriculates* of that famous university to ask them some plain questions. *Arbutnot.*

matriculation (mā-trik'ū-lā'shon), *n*. [= *Sp. matriculación*, *< ML. *matriculatio(n)-*, *< matriculare*, register see *matriculate*.] The act of matriculating, or of admitting to membership by enrolment, the state of being matriculated.

A scholar absent from the university for five years is struck out of the *matriculation* book. *Ayliffe, Paragon.*

matriculator (mā-trik'ū-lā-tor), *n* [*< ML. *matriculator*, *< matriculare*, register see *matriculate*] One who matriculates.

At Oxford the *matriculators* subscribed the Thirty nine Articles, and also swore to observe three articles of the 28th Canon. *Quarterly Rev., CXLVI, 209*

matrilineal (mat-ri-her'ī-tāl), *n* [*< L. mater* (*matr-*), mother, + *E. heritage*] Inheritance in the female line of descent.

The two systems of *matrilineal* and *polyandry*.
Pop. Sci. Mo., XXX, 141

matrilineal (mat-ri-her'ī-tāl), *a* [*< L. mater* (*matr-*), mother, + *hereditary* + *-al*] Of or pertaining to matrilineal, or inheritance in the female line.

An excellent specimen of the matrilineal or *matrilineal* system fully carried out under recognized and well defined law among a civilized people. *Pop. Sci. Mo., XXX, 141*

matrimoine, *n* A Middle English form of *matrimony*. *Chaucer*

matrimonial (mat-ri-mō'ni-al), *a* [= *F. matrimonial* = *Sp. Pg. matrimonial* = *It. matrimoniale*, *< L. matrimonialis*, pertaining to marriage, *< L. matrimonium*, marriage see *matrimony*] 1 Of or pertaining to matrimony, connubial, nuptial as, *matrimonial* rights or duties.

(herish thy hasten'd widowhood with the gold
 Of *matrimonial* treason! *Milton, S. A., I, 950*

The main article in *matrimonial* alliances.
Paley, Moral Philos., III, 8.

2 Derived from marriage.

If he (Henry VII) relied upon that title he could be but a king at courtesy, and have rather a *matrimonial* than a regal power. *Bacon, Hist. Hen. VII*

Crown matrimonial, in *Scot. hist.*, the right to a share in the sovereignty conferred on the husband of a reigning queen. The extent of this concession appears never to have been precisely defined, but the common belief is that it implied a complete partnership in the crown, with remainder to the survivor and his or her heirs. It was granted with important reservations, on the occasion of the first marriage of Mary Queen of Scots, and was explicitly refused to her second husband. **Matrimonial cause**, in *law*, a suit for the redress of injuries respecting the rights of marriage, as an action for divorce or the like. In England such causes were formerly a branch of the ecclesiastical jurisdiction. **Matrimonial Causes Act**, a series of English statutes relating to causes arising from the matrimonial relation. (a) A statute of 1857 (20 and 21 Vict., c. 85) which established the Court for Divorce and Matrimonial Causes, having exclusive jurisdiction over divorce and matrimonial matters, and settled the law relating thereto. (b) A statute of 1873 (41 and 42 Vict., c. 19) relating to divorce and judicial separation. (c) A statute of 1881 (44 and 45 Vict., c. 68) which substitutes for the restitution of conjugal rights formerly enforced periodical payments of money by the husband, authorizes the court to order a settlement of a wife's property for the benefit of the husband and children, and relates to desertion and custody of children = *Syn.* 1 *Matrimonial*, *Connubial*, *Nuptial*, *Conjugal*, *Hymeneal*, *Marital*. *Matrimonial*, *connubial*, and *conjugal*, like *matrimony*, relate to the married state. *Nuptial* and *hymeneal* are more suggestive of the act of marriage or that which is in close connection with it. *Connubial* suggests the fact that marriage is the union of persons of opposite sexes. *Conjugal* primarily means belonging to a spouse, and secondarily belonging to the state of spouses -- that is, matrimony as, *conjugal* fidelity, responsibility, obligations, rights. *Marital* means, specifically, belonging to a husband, but is also used with reference to the married state in general.

matrimonially (mat-ri-mō'ni-al-ē), *adv* As regards matrimony; in matrimony, according to the manner or laws of marriage.

He is so *matrimonially* wedded unto his church that he cannot quit the same. *Ayliffe, Paragon*

matrimonious (mat-ri-mō'ni-us), *a*. [*< matrimony* + *-ous*.] Relating to matrimony, matrimonial.

Foreseeing the miserable work that man's ignorance and pusillanimity would make in this *matrimonious* business. *Milton, Tetrachordon*

matrimony (mat'ri-mō-ni), *n* [*< ME. matrimonye*, also *matrimoyne*, *matrimoyne*, *< OF. matrimoine*, *matrimoine* = *Pr. matrimonium* = *Sp. Pg. It. matrimonio*, *< L. matrimonium*, marriage, wedlock, in pl. wives, *< mater* (*matr-*), mother (see *mater*², *mother*¹), + term *-monium* see *-mony*] 1 The relation of husband and wife, with especial reference to what concerns the

latter; the state of marriage or wedlock; nuptial union, conjugal partnership.

He that joyneth his virgin in *matrimony* doth wel
Wych, 1 Cor vii 38.

2 The act of marriage, entrance upon the married state by a formal ceremony or procedure as, the solemnization of *matrimony* by a clergyman. In the Roman Catholic Church *matrimony* is regarded as one of the sacraments.

Exhorting the married men to temperance, and the bachelors to *matrimony* Goldsmith, Vicar, ii.

3 Wife [A Latinism. Compare *wedlock* in the same sense.]

Restore my *matrimony* undefil'd,
Wrong not my niece, and, for our gold or silver
If I pursue you, hang me!
Beau and Fl, Little French Lawyer, iv 6.

4 A game with cards = *Syn.* 1 and 2 *Wedlock*, *Wedding*, etc. See *marriage*.

matrimony-vine (mat'ri-mō-ni-vin), *n*. A garden-plant, *Lycium vulgare*, also, the closely allied *L. barbarum*. The latter is said to be used in medicine in Japan.

matrimonyet, *n*. A Middle English form of *matrimony*.

matrix (mā'triks or mat'riks), *n*, *pl* *matrices* (mat'ri-sēz, *L* māt'ri-sēz) [*L* *matrix* (*matric-*), a breeding animal, the parent stem (of plants), *L* the womb, a source, origin, cause, a public register or roll, *<* *mater* (= *G* *μήτηρ*), mother. See *mater*², *mother*¹.] 1 The womb, the uterus.

All that openeth the *matrix* is mine Ex xxxiv 19.

Hence—2 That which incloses anything, or gives origin to anything, like a womb. (a) A mold which gives form to material forced into it in a solid condition, or poured into it in a fluid state and allowed to harden before removal. (b) In *coinage*, the intaglio formed in steel by engraving, or by driving into the metal a tool called a *hub*, upon which the design of the coin has been produced in relief. The steel matrix is subsequently hardened and tempered. From this matrix punches for making dies are obtained by driving into it pieces of soft steel, which, after taking form from the matrix, are in their turn hardened and tempered. The instruments used in coining thus alternately take the design in cameo and intaglio, and in order as follows: (1) cameo, the hub, (2) intaglio, the matrix, (3) cameo, the punch, (4) intaglio, the die. Lastly the coin is struck in cameo by the die. (c) The bottom die in any stamping or drop press. (d) In *type founding*, an attachment to the mold in which the face of a type is cast; the mold proper making the body for that face. Every letter or character has its special matrix, but all the matrices of the same font are fitted to one mold. The matrix is a small flat bar of copper that has received the deeply sunken impress of the punch, or model letter cut on a rod of steel. As left by the punch it is known as a *drive*, or *strike* or *unjustified* *matrix*. When finished and fitted to the mold it is a *justified matrix*. Matrices are also made by the electrotyping process. (e) In *stereotyping* the mold of plaster, paper, maché, or other composition which is taken from types as arranged in the form, and into which the molten alloy called *stereotype metal* is poured in casting stereotype plates. (f) In *mineral and rock*, the rock in which any accidental crystal, mineral, or fossil is embedded. (g) In *mining*, same as *gangue*, 1 [Rare and incorrect.] (h) In *odontol.*, the formative part of a mammalian tooth, consisting of a pulp and capsule. The former is converted into dentine, the latter into cement. (i) In *anat.*, the intercellular substance as, the *matrix* of cartilage, containing corpuscles, the animal *matrix* of bone, impregnated with mineral salts, etc. (j) In *bot.* (1) that upon which a plant is fixed or from which it grows as, lichens which grow upon a *matrix* of rock. (2) Intercellular substance as, the filaments of nodule in a gelatinous *matrix*.

3 In *math.*, a rectangular array of quantities, usually square so called because considered as a mold or set of compartments into which a certain number of quantities can be put, the leaving of one of the spaces unoccupied being in effect to put zero there. The matrix is consequently a multiple quantity having as many dimensions as it has spaces. The numbers in the spaces are called the *constituents of the matrix*. The following definitions relate to square matrices. The vertical lines of numbers are called the *columns*, the horizontal ones the *rows*. The diagonal running from the upper left hand to the lower right hand corner is called the *principal diagonal*. Constituents symmetrically situated with reference to the principal diagonal are said to be *conjugate*. A matrix in which every constituent is equal to its conjugate is said to be *symmetrical*, if all the constituents along each diagonal band transverse to the principal diagonal are equal, the matrix is said to be *perysymmetrical*. The addition of matrices is so understood that the sum of two like matrices is a matrix every constituent of which is equal to the sum of the corresponding constituents of the parts. The multiplication of two like square matrices is so understood that the product is a matrix whose construction is of the kind shown in the following example:

$$\begin{Bmatrix} a & b \\ c & d \end{Bmatrix} \times \begin{Bmatrix} A & B \\ C & D \end{Bmatrix} = \begin{Bmatrix} aA + bC & aB + bD \\ cA + dC & cB + dD \end{Bmatrix}$$

Inverse matrix to a given matrix, the matrix of transformation from the set of variables to which the direct matrix transforms to the set from which it transforms. Also called *reciprocal matrix*. — **Invertebrate matrix**, a square matrix whose principal diagonal contains zeros. — **Latent roots of a matrix**. See *latent*. **Matrix of the type** $q \times p$, a matrix with p columns and q rows.

The types of two matrices are said to be complementary when $p = q$ or $q = p$. — **Matrix-rolling machine**, in stereotyping by the paper process, a machine sometimes used, in place of the beating table and brush, to force the type into the prepared paper. — **Nuclear matrix**. See *karyoplasm*. — **Reciprocal matrix**. See *inverse matrix*. **matron** (mā'tron or mat'ron), *n*. [*<* *F* *matrone* = *Sp* *Pg* *It* *matrona*, *<* *L* *matrona*, a married woman, wife, matron, *<* *mater*, mother. See *matr*², *mother*¹.] 1. A married woman, especially an elderly married woman, or a woman old enough to be the mother of a family, whether actually so or not; a woman possessing the gravity suitable to a mother.

Yet did that ancient matrons all she might
To cherish her with all things choice and rare
Spenser, F. Q., VI. xli. 14.

For thee the soldier bleeds, the matron mourns
Pope, *Iliad*, vi. 412.

Cf. *L* *mater*, mother, *manus*, hand, usually referred to the same root. See *mother*¹, *man*³.] 1 Sensible substance, that which offers resistance to touch or muscular effort, that which can be moved, strained, broken, comminuted, or otherwise modified, but which cannot be destroyed or produced, that which reacts against forces, is permanent, and preserves its identity under all changes. Matter has three states of aggregation, the solid, the liquid, and the gaseous. See *solid*, *liquid*, *gas*, and *ether*¹.

One and the same quantity of *matter* remains invariable in nature, without addition or diminution. Bacon, *Physical Fables*, I. 1, Expl.

Matter being a divisible substance, consisting always of separable, nay of actually separate and distinct parts, 'tis plain that, unless it were essentially conscious, in which case every particle of *matter* must consist of innumerable, separate, and distinct consciousnesses, no system of it in any possible composition or division can be any individual conscious being. Clarke, To Mr. Dodwell.

According to the definition I have proposed, *Matter*, and the changes of *Matter*, mean the felt, and the changes of the felt, and all our knowledge of *Matter* is in feeling, and the changes of feeling.

G. H. Lewis, *Probs. of Life and Mind*, II. iv. § 88.

All that we know about *matter* is that it is the hypothetical substance of physical phenomena.

Huxley, *Sensation and Sensiferous Organs*.

2 In *philos.* (a) That which is in itself nothing definite, but is the subject of change and development, and by receiving a form becomes a substance, that out of which anything is made. See *form*. *Matter* in this sense (a translation of Aristotle's word *ὕλη* originally wood) is termed by the scholastic *matter ex qua* (out of which), to distinguish it from *matter circum quam* (concerning which), or the object of any action or power, as well as from *matter in qua* (in which), or the subject of any attribute.

Generally *matter* is divided into that out of which, in which, and about which, that out of which is that which is properly so called, in which the subject, about which the object. *Burgesdictus*, tr. by a Gentleman.

Matter uniform and void. Milton, *P. L.*, vii. 283.

(b) Extended substance. 3 The ceremony of washing the feet of poor
persons or inferiors, performed as a religious
rite on Maundy Thursday in commemoration of
Christ's washing the disciples' feet at the last
supper. It consists in the washing of the feet of a num-
ber of men, generally twelve (in the Western Church usu-
ally paupers or poor priests), by a priest, prelate, or sov-
ereign. The custom, of very early origin, is obsolete in
the Anglican Church, but is still observed in the Greek Church
and in the Roman Catholic Church. See *lampetum pe-
diluviu*

My wife had been to day at White Hall to the *Maundy*
by being Maundy Thursday, but the King did not wash
the poor people's feet himself, but the Bishop of London
did it for him *Pepys*, *Diary*, III 160

ing the ceremony of foot-washing — **Maundy
dish**, a dish in which the maundy money was contained
when presented to the sovereign for distribution —
Maundy money, **maundy coins**, money distributed by
the almoner of the English sovereign to certain poor
men and women who on Maundy Thursday attend a ser-
vice in the Chapel Royal at Whitehall. The maundy money
is to the amount of a penny for each year of the sovereign's
age. From 1602 to the present time small silver coins of
the value of fourpence, threepence, twopenner, and one
penny have been specially struck for this distribution.
They are legally (though with the exception of the three-
penny pieces, not practically) current coins of the realm

money distributed by the king or queen — **Maundy
Thursday**, the Thursday of Holy Week, commemorating
Christ's last supper, and also both in the Greek and the
Western Church his washing of the disciples' feet upon that
day (See def. 3.) It has been the custom in both the
Greek and the Western Church since the fifth or sixth cen-
tury to consecrate the chrism and holy oils on Maundy
Thursday. In England the day is observed, in addition to
its other special religious services, by a distribution from
the sovereign of clothing and money among the poor (See
maundy money). In the Greek Church Maundy Thursday
is called the *Great Thursday* or the *Great and Holy Thurs-
day*. Also called *Mandate Thursday*, *Chase Thursday*,
Sheer Thursday, *Cena Domini*, and, improperly, *Holy
Thursday*. See *Tenebrae*

Maurandia (mā-ran'di-ā), *n* [NL. (Ortega,
1800), named after Dr *Maurandy*, professor of
botany at Cartagena in Spain.] A genus of
plants of the natural order *Scrophulariaceae* and
tribe *Antirrhinea*. It is characterized by a large corol-
la which is partially gibbous at the base and open at the
throat, and by the cells of the anther at length becoming
confluent. The plants are climbing herbs, supporting
themselves by their twisted petioles and flower-stalks.
They have hastate leaves, either angularly lobed or coarsely
dentate, and showy violet, purple, or rose-colored axil-
lary flowers. There are 6 species, found in Mexico and
Texas, very ornamental and frequently cultivated. The spe-
cies *M. erubescens* and *M. scandens* were formerly classed
as *Lophospermum* while the old *M. antirrhiniflora* is now
referred to *Antirrhinum*.

Maurice of Nassau.] A genus of South Ameri-
can palms belonging to the tribe *Lepidocarpeae*
and the subtribe *Mauritia*, characterized by
flowers in catkins borne on the branches of the
spikes, and by fourfold seeds. They often attain
the height of 100 or 150 feet, and bear a crown of enormous
fan-shaped leaves. There are 9 species, found in Brazil,
Guiana, and the West Indies. *M. majera*, the Brazilian
wine palm or bariti and *M. flexuosa*, the molochi or flap-
palm, are of great importance to the natives of the regions
where they grow. See *Buriti* and *vin palm*.

fishes, typified by the genus *Mauroleus*. They
have a compressed claviform body, no scales, but rows of
phosphorescent spots along the sides of the abdomen and
scattered spots on the head, a deeply cleft mouth and the
margin of the upper jaw formed laterally by the supra-
maxillaries which are denticulate. The species are in-
habitants of the high and deep seas. By some authors
they are referred to the family *Sternorhynchidae* as a sub-
family *Coccone* or *Cocconinae*.

When long and blade-like, forming the apex of the organ, it is called the *lacinia*. It may be divided into two parts — the inner and outer or the internal and external lobes. The outer lobe is sometimes transformed into a two-jointed palp, in addition to the true maxillary palpus. — **Maxillary palp.** In *entom.*, appendages, each composed of from one to six joints, attached to the outer sides of the maxillae. See *palpus*. — **Maxillary segment.** the elementary second post-oral segment of an insect's head, which bears the maxillae. It is perhaps represented by parts of the genae and the occiput. This is generally called the *first maxillary* to distinguish it from the *second maxillary*, or labial segment. See *postoral*. — **Maxillary sinus.** the great cavity or hollow of the supramaxillary bone of man and some other mammals, communicating with the middle meatus of the nose commonly called the *antrum Highmoreanum* or *antrum of Highmore*. See *antrum*. — **Maxillary teeth.** teeth implanted in the supramaxillary bone. In mammals they are distinguished from the incisors, which are implanted in the premaxillary. Such maxillary teeth as the canines, premolars, and molars. In the lower vertebrates as fishes they are distinguished from the vomerine, palatal, pharyngeal, etc., teeth. — **Superior maxillary nerve.** the second main division of the fifth or trigeminal nerve, extending from the Gasserian ganglion, and mainly distributed to the upper jaw.

Inferior Maxillary or Lower Jaw bone of Man

A, symphysis menti B, angle of jaw, C, levity or horizontal ramus, D, coronoid process, E, ascending ramus, F, condyle, the teeth inserted along the alveolar border. The concave line between D and F is the condyloid notch.

II. n., pl. maxillaries (-rīz). A jaw-bone, a maxillary bone, or maxilla. In vertebrates at least three maxillaries are commonly distinguished by qualifying terms. These are (a) the superior maxillary, or supramaxillary, (b) the premaxillary, or intermaxillary, and (c) the inferior maxillary, or inframaxillary. The last of these is the lower jaw bone, the other two belong to the upper jaw. All these are paired but each may fuse with its fellow, and the two maxillaries of each half of the upper jaw often coalesce. When used absolutely, the term means the supramaxillary.

maxilliferous (mak-sil'fēr-us), *a.* [*L. maxilla*, jaw, + *ferre* = *E. bear*] Provided with maxillae as, the *maxilliferous* mouth of a crustacean or beetle.

maxilliform (mak-sil'fōrm), *a.* [*L. maxilla*, jaw, + *forma*, form] Having the form or morphological character of a maxilla. as, a *maxilliform* limb.

maxillomandibular (mak-sil'ō-man-dib'ū-lār), *a.* [*L. maxilla* + *mandibula* + *-ar*] Pertaining to both jaws — that is, to the maxilla and to the mandible.

maxillopalatine (mak-sil'ō-pal'ā-tin), *a.* and *n.* [*L. maxilla* + *palato* + *-ine*] **I. a.** In *anat.*, of or pertaining to the supramaxillary and palatine bones.

II. n. In *ornith.*, a part of the superior maxillary bone which projects inward, forming a palatal process, which may or may not meet its fellow in the midline of the bony palate. Its character and connections are various, and much used in the classification of birds. See cuts under *Aglyptognathous*, *dermogathous*, and *dromogathous*.

maxillopharyngeal (mak-sil'ō-fā-rin'jē-al), *a.* [*L. maxilla* + *pharynx* (pharyng-) + *-eal*] Pertaining to the lower jaw-bone or inframaxillary and to the pharynx. — **Maxillopharyngeal space.** In *surgical anat.*, a triangular area between the side of the pharynx and the ramus of the lower jaw bone, containing important vessels and nerves, as the internal carotid artery, the internal jugular vein, and the glossopharyngeal, pneumogastric, spinal accessory, and hypoglossal nerves.

maxillopremaxillary (mak-sil'ō-prē-mak-sil'ārī), *a.* and *n.* [*L. maxilla* + *premaxilla* + *-ary*] **I. a.** Common to the maxilla and to the premaxilla as, "the *maxillopremaxillary* part of the skull," *Huxley*.

II. n. The supramaxillary and premaxillary bones taken together, when, as in many of the higher vertebrates, they fuse into a single bone.

maxilloturbinal (mak-sil'ō-tēr'bi-nāl), *a.* and *n.* [*L. maxilla* + *turbine* + *-al*] **I. a.** Whorled or scrolled, and articulated with the supramaxillary bone, as is the inferior turbinated bone.

II. n. The inferior turbinated bone. In man it is a light spongy bone curved upon itself, articulating with the supramaxillary, palatal lacrymal, and ethmoid bones, and projecting into the nasal fossae, serving to separate the middle from the lower of these fossae. The name is correlated with *ethmoturbinal* and *sphenoturbinal*. See cuts under *nasal* and *craniofacial*.

maxim (mak'sim), *n.* [*L. F. maxime* = *Sp. maximo* = *Pg. maximo* = *It. massima*, *ML. maxi-*ma, a maxim, abbr. of *LL. maxima propositio*, premise, the greatest or chief premise (applied by Boethius to the rules of the commonplaces which are more than ordinary major premises), fem. of *L. maximus*, greatest, superl. of *magis*, great see *maximum*] **1.** A proposition serving as a rule or guide, a summary statement of an established or accepted principle, a pithy expression of a general rule of conduct or action, whether true or false. as, the *maxims* of religion or of law, the *maxims* of worldly wisdom or of avarice, ethical *maxims*.

To have power, have ability, be able, can. In the absolute original use, 'can,' now rare (being superseded by *can*) except where a degree of contingency is involved, when the use passes insensibly into the later use. The uses of *may* are much involved, the notions of power, ability, opportunity, permission, contingency, etc.,

passing into each other, and *may* in many constructions being purposely or inevitably used with more or less indefiniteness. The principal uses are as follows: (a) To indicate subjective ability, or abstract possibility rarely used absolutely (as in the first quotation), but usually with an infinitive (not, however, as a mere auxiliary) See also *might*.

For and thou ouer me myttel, as y ouer thee may,
Weel bittill thou woldist me hynde
Political Poems, etc. (ed Furnivall), p 167

The last of April or the first of May
Tennyson, The Brook
The young may die, but the old must!

Longfellow, Golden Legend, IV

In this sense, when a negative clause was followed by a
contingent clause with *if*, *may* in the latter clause was
formerly used elliptically, *if I may* meaning 'if I can con-
trol it' or 'prevent it'

My body, at the locate way,
Ther shal no wight defoulon, *if I may*
Chaucer, Franklin's Tale, I 690

"Hey boldly that wille," quod he,
"I nyl be wroth, *if that I may*,
For nought that thou shalt to me say."
Rom. of the Rose, I 3099

Sometimes *may* is used merely to avoid a certain bluntness
in putting a question, or to suggest doubt as to whether
the person to whom the question is addressed will be able
to answer it definitely

How old may Phillis be, you ask,
Whose beauty thus all hearts engages?
Prior, Phillis's Age

The preterit *might* is similarly used, with some slight ad-
dition of contempt

Who might be your mother,
That you insult, exult, and all at once,
Over the wretched!
Shak, As you Like It, III 5 35

(c) To indicate opportunity, moral power, or the absolute
power residing in another agent

As I shalle devyne you asche as thei ben, and the names
how thei clepen hem to suchie entent, that see mouse
knowe the difference of hem and of othere

(d) To indicate permission the most common use.

Thou mayest be no longer steward
Luke xvi 2
An I may hide my face, let me play Thisby too
Shak, M N D, I 2 58.

I might not be admitted
Shak, T N, I 1 25

In this sense *may* is scarcely used now in negative
clauses, as permission refused amounts to an absolute
prohibition, and accordingly removes all doubt or contin-
gency (e) To indicate desire, as in prayer, aspiration,
imprecation, benediction, and the like. In this sense
might is often used for a wish contrary to what can or
must be as, (i) that I might recall him from the grave!

May you live happily and long for the service of your
country
Dryden, Iliad of Æneid

Certain as this, O! might my days endure,
From age inglorious and black death secure
Pope, Iliad, VIII 667

That which I have done,
May He within himself make pure!
Tennyson, Passing of Arthur

(f) In law, *may* in a statute is usually interpreted to mean
must, when used not to confer a favor, but to impose a duty
in the exercise of which the statute shows that the public
or private persons are to be regarded as having an interest.

B. As an auxiliary. In this use notionally
identical with *may* in the contingent uses
above, in A (b), but serving to form the so-

called compound tenses of the subjunctive or
potential mode, expressing contingency in con-
nection with purpose, concession, etc. *May* is so
used—(1) In substantive clauses, or clauses that take the
place of or are in apposition with the subject or object or
predicate of a sentence introduced by *that*.

It was my secret wish that he might be prevailed on to
accompany me
Byron

They apprehended that he might have been carried off

Southey

I heard from an old officer that when in the West Indies
he was told by a lady, at whose house he was dining, that
he might not like the soup, as it was made from snakes.
N and Q, 7th ser, II 885

(2) In conditional clauses [Rare except in clauses where
permission is distinctly expressed]

Land, goods, horse, armour, anything I have
Is his to use, so Somerset may die.
Shak, 2 Hen VI, v 1 53

(3) In concessive clauses

Whatever the stars may have betokened, this August,
1749, was a momentous month to Germany
G H Lewes

A great soul may inspire a sick body with strength, but
if the body were well, it would obey yet more promptly
and effectually
J F Clarke, Self Culture, p 65

(4) In clauses expressing a purpose

Was it not enough for thee to bear the contradiction of
sinners upon Earth, but thou must still suffer so much at
the hands of those whom thou didst for, that thou might
est bring them to Heaven?

May-pole (mā'pōl), *n.* 1. A pole around which the people dance in May-day festivities. It was usually, at and set up afresh on May day morning, drawn by a long procession of oxen, decorated, as were also the pole itself and the wagon, with flowers and ribbons, but in some cases a pole once set up was left from year to year, as notably the famous pole of the parish of St. Andrew Undershaft in London, which was cut down in the reign of Edward VI. At the restoration of Charles II a May pole 14 feet high was set up in the Strand. A few May poles still remain in England, although the celebration is almost obsolete.

Their chiefest jewel they bring from thence is the *May pole* which they bring home with great veneration, as thus - they have twentie or fourtie yokes of oxen every ox having a sweete nosegate of flowers tied to the tip of his hornes, and these oxen drawe home the *May pole*. *Stubbes*, quoted in *Strutt's Sports and Pastimes*, p. 465

mazer-tree (mā'sér-trē), *n.* The common maple of Great Britain, *Acer campestre*. Also *mazer-tree*.

mazer-wood (mā'sér-wūd), *n.* 1. Same as *mazer*, 1.—2. Gutta-percha. See the quotation.

In the Museum Tradescantianum the following entry occurs: "The playable mazer wood, being warmed, will work to any form." This museum became the nucleus of the Ashmolean Museum at Oxford. The word "mazer," variously spelt, often occurs in early English poetry, and is especially mentioned in old catalogues and wills. It is by no means impossible that mazer cups may have been made of gutta-percha, as its lightness, strength, and non-liability to fracture would recommend it, and curiously enough one of the vernacular names of the tree yielding gutta-percha is "mazer wood tree." *Encyc. Brit.*, XI 388.

maizly (mā'zi-li), *adv.* In a mazy manner, by winding and turning; with confusion or perplexity.

ognized formative -dr. But possibly the root **mād-*, **mād-* (the formative being -w), may be cognate with L. *mātere*, reap, mow, which may contain an extended form of the root of *mow* see *mow*¹] 1. A low, level tract of land under grass, and generally mown annually or oftener for hay, also, a piece of grass-land in general, whether used for the raising of hay or as pasture-land. Meadows are often on the banks of a river or lake but so far above the surface as to be dry enough to produce grass and herbage of a superior quality. In some parts of the United States, as New England land so situated is called *meadow* or *meadow-land* without reference to its use, and in other parts, especially in the West, *bottom* or *bottom land*.

The first tidings of Vicary (who was probably born between 1490 and 1500) are, that he was "a meane practiser (had a moderate practice) at Maldstone, and was not a trained surgeon." Quoted in *N. and Q.*, 7th ser., VI 42.

3 Coming between two events or points of time, intervening; intermediate only in the phrase in the mean time or while.

In the meane while late vageroure kyn and ourefrendes and sowerdes out of alle londes, and late vs yove hem ba telle as soone as we may be assembled.

Morris (R. E. T. S.), II. 174.

In the mean while his disciples prayed him, saying, Master, eat.

John iv. 31.

4 Intermediate in a number of greater and less values, quantities, or amounts, forming an average between two or more terms of any kind, average, specifically, in *math.*, having a value which is a symmetrical function of other values of the same sort, such that, were all those other values to be equal, the value of the function would be equal to them all (compare II, 4), as, the mean breadth of a country, the mean distance of the earth from the sun.

Those constitutions which can bear in open day the rough dealing of the world must be of that mean and average stature — such as iron and salt, atmospheric air and water.

Emerson, *Society and Solitude*.

Center of mean distances. See *center*! — **Focus of mean motion.** See *focus*. — **Mean anomaly.** See *anomaly*, 2. — **Mean apogee.** See *apogee*, 1. — **Mean cleft.** In *musical notation*, the cleft, because once specially used for the mean or middle voices. — **Mean distance, ecliptic, effort.** See the nouns. — **Mean error.** See *error*, 5. — **Mean line.** In *crystal*, a bisectrix; the first mean line is the acute, the second mean line the obtuse bisectrix. — **Mean longitude** of the sun, moon, or a planet, in *astron.*, the celestial longitude which the body would have at any moment if starting from perihelion, it moved in its orbit with a uniform angular velocity, completing its revolution in the same time it actually employs in making the circuit. The mean and true longitudes agree therefore at perihelion and aphelion. — **Mean moon**, an imaginary moon, supposed to move with an equable motion in the ecliptic, and in the same period as that which the real moon takes to perform a revolution with an unequal motion. — **Mean noon**, the moment when the mean sun passes the meridian. — **Mean place**, in *logic*, a place which partly agrees with the nature of the things to be proved, and partly differs from the same. The mean places are conjugates, cases, and divisions. — **Mean position**, in *geology*, a position of the wrist midway between pronation and supination, with the thumb above the fingers. — **Mean ratio** (old *horology*) — **Mean proportional**, the second of any three quantities in continued proportion. — **Mean solar day.** See *day*, 3. — **Mean space**, meanwhile.

Mean space entreats our friends not to be too hussie in answering matters before they know them.

Cushman, quoted in Bradford's *Plymouth Plantation*, p. 55. — **Mean sun**, in *astron.*, an imaginary or fictitious sun, moving uniformly in the celestial equator, and having its right ascension always equal to the sun's mean longitude. Its hour angle at any moment defines the mean time or clock time, just as the hour angle of the actual sun defines the apparent or sun dial time. The use of the mean sun in time reckoning is necessitated by the fact that, owing to the eccentricity of the earth's orbit and the inclination of the equator to the ecliptic, the sun's real motion in right ascension is seasonally variable, and the days, hours, etc., of apparent solar time have, therefore, no fixed length. See *day*, 3. — **Mean term**, in *logic*, same as *middle term* (which see, under *middle*). — **Mean time**, a system of reckoning time, such that all the days and their like subdivisions are of equal length, its day being the mean interval between the two successive passages of the sun over the meridian of any place. The mean time at any moment may be defined as the hour angle of the mean sun at that moment. (See *mean sun*.) Mean time is the time usually employed for civil and scientific purposes and is the time indicated by an ordinary clock or watch, properly regulated. Apparent time is that indicated by a correctly adjusted sun dial, the difference between the mean and the apparent time at any moment is called the *equation of time* and sometimes slightly exceeds a quarter of an hour. — **Mean voice**, in *music*, a voice or voice part intermediate between the highest and the lowest, as a tenor or an alto. — **Mean way**, mean time.

In the meane way they [Lerius and his fellows] passed by the Tapeinry Parable Outcastes, all which, howsoever they exercise hostilities and mutual disagreements, yet agree in like barbarous and rightlesse Rites.

(b) The second of a set of viols, an alto.

Their chiefe instruments are Rattles made of small gouds, or Pumpions shels. Of these they haue Base, Tenor, Countertenor, Meane and Treble.

Capt. John Smith, *Works*, I. 136.

(c) Either the second or the third string of a viol, the former being the *small mean*, and the latter the *great mean*. — **4** A quantity having a value intermediate between the values of other quantities, specifically, in *math.*, the average, or *arithmetical mean*, obtained by adding several quantities together and dividing the sum by their number. In general a mean is a quantity which depends upon certain other quantities according to any law which conforms to these two conditions: first, that if the quantities which determine the mean should all be equal the mean would be equal to any one of them; and second, that no transposition of the values of the determining quantities among themselves can alter the value of the mean. (See *geometrical mean*, below.) The ancients recognized ten kinds of mean (*arithmetic, geometric, harmonic, logarithmic, subduplicate, triplicate, quadruplicate, quintuplicate, sextuplicate*), distinguished by ordinal numbers, to which Jordanus Nemorarius added an eleventh. Only the first four, the arithmetical, geometrical, harmonic, and contraharmonical, are true means.

5 In *logic*, the middle term in a syllogism. — **6** A mediator, an intermediary, an agent, a broker, a go-between.

Plough that our hertes sterne ben and stoute, Thow to thy Rone canst be swich a meane That alle our gyltes he forgyveth cleane.

Chaucer, *Mother of God*, l. 88.

Chaucer, *Troilus*, III. 264.

7 A subsidiary agency or instrumentality, that which confers ability or opportunity to attain an end now rare in the singular, the plural form being used with both singular and plural meanings, as, *means* of travel or of subsistence, by this *means* you will succeed.

Be that meane the cite for to wyne.

Geoffrey Chaucer, *F. Q.*, I. 952.

Let me have open means to come to them.

Shak., *Rich. III.*, iv. 2. 77.

An outward and visible sign [a sacrament] of an inward and spiritual grace given unto us, ordained as a means whereby we receive the same, and a pledge to assure us thereof.

Book of Common Prayer, (Catechism).

What person trusted chiefly with your guard, You think is aptest for me to corrupt. In making him a mean for our safe meeting.

Chapman, *Gentleman Usher*, II. 1.

The end must justify the means. — *Prior*, Hans Carvel.

8 Causative agency or instrumentality, contributory aid or assistance; help, support only in the plural form, in the phrase *by means of*, or *by* (or *through*) . . . means, as, we live by means of food, it came about through their means.

Webbe, *Travels*, p. 28 (ed. Arber).

After she had been in prison three or four days, she made means to the governor, and submitted herself, and acknowledged her fault in disturbing the church.

Winthrop, *Hist. New England*, I. 339.

=Syn. 1. Mean, Medium, Average, Medocrity. Mean and medium represent the middle point or degree. Mean is much used in mathematics. (See *arithmetical mean*, *geometrical mean*, etc., above.) Mean is also much used in morals, as, in conduct we are to observe the golden mean, Aristotle held that each virtue was a mean between vice of defect and a vice of excess. Medium has this latter sense, but is used chiefly in matters of practical life, as, goods that are a medium between the best and the poorest, a color that is a medium between two others. In this sense medium is much used as an adjective, as, a medium grade, color, price. Means is the form of mean that corresponds to medium when it stands for that which by being between others, is the agency for communication, etc. As mean and medium generally imply simply two extremes, but may imply several quantities of different amounts or degrees, so average may imply simply two extremes, but generally implies several quantities of different amounts or degrees, as, the average of 3, 5, 7, and 9 is 6. The latter word has similar figurative uses, as, the man's education was better than the average. Medocrity is now used only in an unfavorable sense, implying blame or contempt, as, talents not above medocrity — that is, very moderate. — **7.** Instrument, method, mode, way, expedient, resource, appliance.

mean⁴ (mēn), *v.* [*ME. meuen, < AS. mēnan*, lament, moan. See *moan*, the present E form. The AS. is often identified with *mēnan*, mean, but the difference of meaning makes it necessary to treat it as a distinct word.] **I. intrans.** To moan, lament, mourn, complain.

The word *measles*, ME *measles*, *masalus*, is entirely distinct from ME *mevel*, a leper, whence *mevelly*, leprosy, but has been more or less confused with it, as in MD *masel-sucht*, MLG *masel-massel*, *meisel-sucht*, *suker*, defined as "the measles-sickness" (Hexam), or measles, but prop. the 'leper-sickness,' or leprosy. The words *meisel*, *mevelly* became nearly obsolete before the 17th century, in ME the words were pronounced differently. Hence the equiv *measlings*, q v. The singular *measle* (def 1, above) appears to have been developed from the plural (which is now used as singular), in the sense 'a spot like those of measles,' and not in the orig. lit. sense (in MD, etc.) of 'a little spot.' 1 A contagious disease of man, with an incubation period of about nine or ten days, and a period of invasion of about three or four days, in which there are pyrexia and rapid pulse, inflammation of the mucous membrane of the eyes and upper air-passages, and bronchitis, followed by an eruption of small rose-colored papules, which arrange themselves in curvilinear forms. The period of eruption usually lasts about four days. The eruption is succeeded by a bran like desquamation. The poison is conveyed directly from the patient through the air and by fomites. It is given off in the period of invasion as well as in later periods. Also called *rubeola* and *morbilli*.

6. A definite quantity measured off or meted out as, a measure of wine or meal. In some places, as applied to certain things, a measure is a known quantity, the word being used specifically. Thus in England a measure of corn is a Winchester bushel, in Connecticut, a measure of oysters is five quarts.

Or fortune given me measure of revenge.
Shak, *3 Hen VI*, II. 2. 32

8 Quantity, amount, extent, or any dimension, as measured or meted out; the result of any mensural determination or rule, as, the measure of or for the beams is 10 feet 4 inches; full or short measure. In many technical uses *measure* has specific applications, according to the particular case involved. Thus in printing, the measure of a line, page, or column is its width stated in ems

11 In *pros* (a) Determination of rhythm by division into times or groups of times, rhythm, as so determined, meter. In ancient prosody the unit of measure is the primary time or mora. See *mora*. (b) A group of times or syllables used to determine the length of a

colon, period, or meter. In ancient prosody the measure was sometimes a single foot (monopody), and sometimes a pair of feet (dipody). Iambic, trochaic, and anapaestic rhythms were as a rule measured by dipodies, other meters by monopodies. The measure was marked as such by beating time, the secondary locus of a dipody not relieving the beat. According to the number of measures contained in it, a meter was designated as *monometer*, *dimeter*, *trimeter*, etc., and these terms are still in use for modern poetry, some writers, however, counting every foot a measure

Meeter and measure is all one, for what the Greeks call *μετρον*, the Latins call *Mensura* and is but the quantity of a verse, either long or short.

Pattenham, *Arts of Eng Poets*, p 55

(c) A rhythmical period or meter, especially as determined by division into such groups, a rhythm, line, or verse

Long, stately, and swelling measures, whose graver movement accords with a serious and elevated purpose. *R C Steadman*, *Vict. Poets*, p. 98

12 In music (a) One of the groups of tones or of accents included between any two primary or heavy accents or beats. A measure always begins with such a primary accent, and includes one or two (or even more) secondary accents with various possible lesser accents. Most rhythms may be reduced to measures having either one primary and one secondary accent or one primary and two secondary accents, the former rhythm being called *duple* and the latter *triple*. Measures are indicated in printed music by bars, one of which is placed before each primary accent. All the notes between two bars are said to belong to the same measure or bar. The essential structure of the measures in a given piece of music is indicated at the beginning by the rhythmical signature. See *signature*. (b) Same as *tempo*. [Rare] — 13 Any regulated or graceful motion, especially, motion adjusted to musical time.

15. A determinate action or procedure, intended as means to an end; anything devised or done with a view to the accomplishment of a purpose; specifically, in later use, any course of action proposed or adopted by a government, or a bill introduced into a legislature as, measures (that is, a bill or bills) for the relief of the poor; a wise measure, rash measures.

Absolute measure. See *absolute*—**Angular measure**, the system of units employed for measuring angles. It is based on the measurement of the circumference of a circle described with the vertex of the angle as its center. The circumference is regarded as divided into 360 equal parts called *degrees*, a right angle is thus the angle subtended at the center by the fourth part of the circumference, or is 90 degrees. The table is

	1	= 16	= 128	= 7680
		1	= 8	= 480
			1	= 60

The capacity of the gallon is 231 cubic inches. The pint of the British Pharmacop. (i.e. being the eighth part of the gallon of 277.274 cubic inches) is divided into 20 fluidounces, with the fluidrachm and minim constituting the same subdivisions of the fluidounce as in the above table. The cubic capacity of the gallon can, however, be stated only approximately. The standards are made to contain a certain weight of water at a certain temperature. See *gallon*.

To measure a length a standard of length is employed. This is laid down so that its beginning coincides with the beginning of the length to be measured, and its other end is marked, it is then laid down again in the same way, with its first end where its last end previously came, and so on, counting the number of times it is laid down. Finally, if there remains a length less than that of the standard, this is measured by subdividing the length of the standard into a sufficient number of equal parts, and using one of these as a secondary standard. Measurements are also effected by reference to units of area or of capacity, as well as by means of weighing, etc.

measuring-line (mez'h'ür-ing-līn), *n.* A line used for measuring lengths.

measuring-machine (mez'h'ür-ing-ma-shēn'), *n.* A device for the exact determination of length or end-measurement. Such instruments usually consist of a metallic bed piece with a head stock at each end, of sliding bars which in shape are true rectangular parallelepipeds, and of a combination of two or more accurate micrometer screws, attached to the head-stocks, and driven by graduated wheels so as to advance or retract the bars, which slide in a groove between the head stocks.

measuring-pump (mez'h'ür-ing-pump), *n.* A pump used for measuring liquids. Each stroke delivers the same volume, and the strokes are counted, or the pump rod is connected with registering mechanism adjusted to indicate the number of strokes or the total volume discharged.

measuring-tape (mez'h'ür-ing-tāp), *n.* A tape-measure or tape-line.

measuring-wheel (mez'h'ür-ing-hwēl), *n.* A small wheel of known circumference, fitted by its axis to a handle, used to measure the circumference of round bodies, as that of a carriage-wheel when the tire is to be fitted, a circumference or tire-measurer.

measuring-worm (mez'h'ür-ing-wērm), *n.* The larva of any geometrid moth, a looper, so called from its mode of progression, same as *geometer*, 3. See cut under *Cidaria*.

Palladius, *Husbandrie* (E. E. T. S.), p. 163.

I have fed you with milk, and not with *meat*, for hitherto ye were not able to bear it. 1 Cor. III 2.

Shall I not take care of all that I think,
Yea, ev'n of wretched *meat* and drink?
Tennyson, *Maud*, xv.

3 The flesh of warm-blooded animals ordinarily killed for food, butchered-meat; flesh-meat, as, to abstain from *meat* but eat fish on Friday, in a narrower sense, the flesh of mammals used for food, as, to prefer *meat* to fowl or fish, bear-meat, deer-meat.

I smell the smell of roasting *meat*,
I hear the hissing fry. *O. W. Holmes*.

4 The edible part of something, as, the *meat* of an egg, of a nut, or of a shell-fish, sometimes with a plural, as, the *meats* of nuts or of oysters.

After I have cut the egg I the middle, and eat up the *meat*. *Shak*, *Lear*, I 4 174.

5 The taking of food or a meal, the act of eating meat, in the original sense of the word, as, grace before *meat*.

Till it come to the *meat* tyme that the kyng made the Duke of Tintagel to be set before hym self.

Morley (E. E. T. S.), I 64.

He 's within at *meat*, sir

The knave is hungry. *Fletcher*, *Pilgrim*, II 2.

The ingenious English tourists who visit the United States from time to time find us silent over our *meat*.

Houelle, *Venetian Life*, vi.

6 Dinner.

So chaunged he his *mete* and his soper.
Chaucer, *Gen. Prolog* to C. T., I 348.

The kyng Arthur hym asked when that was don, and he seide, "Seth yesterday after *mete*."

Morley (E. E. T. S.), III 622.

7. An animal or animals collectively, as used or hunted for food, as, to kill *meat* for an exploring party. [Local.] — *A* *meal's* *meat*. See *meal*². — *Broken meat*. See *broken*. — *Butcher's meat*. See *butcher*. — *Dark meat*, that part of the flesh of some fowls which when cooked is not white or light, particularly the thighs and legs of turkeys. — *Light meat*, the flesh of the breast and wings of various fowls which when cooked is of a whitish color. Fowls which have light meat are the varieties of the domestic hen, the turkey, various grouse, as the ruffed, many partridges, as the bobwhite, etc. It is perhaps confined to the gallinaceous order of birds. Also called *white meat*. — *Red meat*, meat which is ordinarily served underdone, or preferred to be eaten rare, as beef mutton, venison, canvasback, etc. — To be *meat* for one's master, to be too good for one.

Away, you mouldy rogue, away! I am *meat* for your master. *Shak*, 2 Hen IV, II 4 136.

To hang up *meat*. See *hang*. — *Whitemeat* (a) Same as *light meat*. (b) Meat which must be well cooked, leaving no trace of bloodiness, as veal.

*meat*¹ (mēt), *v. t.* [*i* Goth. *matjan*, eat, devour, from the noun, see *meat*¹, *n.*] To supply with food, feed. [Old Eng. and Scotch.]

Strong oxen and horses, wel shod and wel clad,
Wel *meated* and used. *Tusser*, *September's Husbandry*.

Haste then, and *meate* your men though I must still say
My command would lead them fasting forth. *Chapman*, *Illad*, xix. 196.

*meat*², *v.* An obsolete spelling of *meat*¹.

meatal (mē-ā'tal), *a*. [*ME* *meatus* + *-al*] Of or pertaining to a *meatus*, having the character of a *meatus*.

In the hare the *meatal* part of the tympanic is long, and ascends obliquely backward from the frame of the drum membrane. *Owen*, *Anat.*

meat-chopper (mēt'chop'ēr), *n.* Any device for chopping or mincing meats.

meat-earth (mēt'ērth), *n.* Soil. [Prov. Eng.]

The upper part of this [overburden] consists of soil or *meat earth*. *Spence*, *Enquiry*, *Manus*, I 688.

meated (mē'tēd), *a*. Having meat or a fleshy part (of a specified kind) used in composition, as, a sweet-*meated* nut, light-*meated* or dark-*meated* towels.

meat-fly (mēt'fī), *n.* A flesh-fly or blow-fly, a dipterous insect which lays its eggs on meat, on which the larvae feed, applied to various species, especially *Calliphora vomitoria* and *Sarcophaga carnaria*. See cut under *flesh-fly*. — *meat-form*¹, *n.* [*ME* *meto-forme*, < *meat*¹ + *form*] A form or long seat on which to sit at table.

And whenn he swerde brokene was,
A *meto forme* he gatt percas,
And therewith he ganne hym were.
MS. Lincoln A 1 17, f 105 (*Hallwell*).

*meath*¹ (meth), *n.* Same as *meat*¹.

meat-hunter (mēt'hun'tēr), *n.* Same as *pothunter*, 1.

The *meat hunters* are still devoting their attention to the killing of larger game, but, as it decreases, the deer's turn will surely come. *Harper's Mag*, LXXVIII 878.

meatiness (mē'ti-nēs), *n.* The state or quality of being meaty, in any sense, fleshiness, pithiness; as, the *meatiness* of an ox, or of a discourse.

meatless (mē'tles), *a*. [*ME* *meteles*, < *AS* *meteleas* (= *Ice* *metlauss*), without food, < *mete*, food, + *-less*, E. *-less* see *meat*¹ and *-less*] Destitute of meat, without food.

Three dawes and three nygt *meteles* hil wunsto hem so,
That hil nuste hou on take, no wat vor hunger do.
Rob. of Gloucester, p. 170.

Growling over his unenvied virtue as a cur growls over a *meatless* bone. *G. H. Lewes*, *Hist. Philos.*, I 194.

meat-maggot (mēt'ma'got), *n.* The larva of the flesh-fly, *Calliphora vomitoria*, found in meat.

meat-offering (mēt'of'ēr-ing), *n.* A Jewish sacrificial offering, constituting a part of the daily service of the altar or of special services, consisting of fine flour either raw or baked without leaven but with salt, or of dried or parched and pounded corn of the first-fruits, etc., with fine oil and frankincense. See *Lev* I and vi 14-23, etc. In the revised version rendered *meal-offering*.

meatometer (mē-ā-tom'e-tēr), *n.* [*L.* *meatus* (see *meatus*) + *Gr.* *metron*, a measure.] An instrument for measuring the *meatus urinarius*.

meat-pie (mēt'pī), *n.* 1 A pie made of meat or flesh. — 2 A mince-pie. [Local, New Eng.]

meatlife (mēt'rif), *a*. [*meat*¹ + *life*] Abounding with food, plentifully supplied with food. [Scotch.]

The mill it is a *meatly* place.
Robin Hood and the Begger (Child's Ballads, V. 202).

meat-safe (mēt'sāf), *n.* A cupboard or chest in which to keep meat, made with walls of wire gauze or perforated zinc.

meat-saw (mēt'sā), *n.* A saw used by butchers, having a thin, narrow blade fastened in an iron frame or bow, which gives it rigidity.

meat-tea (mēt'tē), *n.* A tea at which flesh-meat is furnished, a high tea (which see, under *high*) [Vulgar.]

A good hearty *meat tea* being the usual premier pas in amatory matters. *G. A. Sala*, *Baddington Peorage*, I 130.

meatus (mē-ā'tus), *n.*, pl. *meatus*, sometimes, as English, *meatuses*. [*L.* *meatus*, a passage, < *meare*, go. Cf. *conge*¹, *permeate*.] In *anat.*, a passage: applied to various ducts of the body. — *Inferior meatus* (of the nose), the passage in the nose between the inferior turbinate bone and the floor of the nasal cavity. Also called *meatus ventralis*. — *Meatus acusticus*. See *meatus auditorius*. — *Meatus auditorius externus*, the external opening of the ear, closed at the bottom by the membrana tympani. Also called *meatus acusticus externus*. — *Meatus auditorius internus*, the passage in the petrous bone by which the auditory and facial nerves leave the cranial cavity. Also called *meatus acusticus internus*. — *Meatus cysticus*, the gall-duct. — *Meatus urinarius*, the external orifice of the urethra. — *Meatus venosus*, the short trunk formed by the union of the right and left vitelline or omphalomesenteric veins in the fetus. — *Meatus ventralis*, the inferior nasal meatus. — *Middle meatus* (of the nose), the passage in the nose between the inferior turbinate part of the ethmoid bone and the inferior turbinate bone. — *Nasal meatus* (pl.), the nasal passages between and below the turbinated parts of the ethmoid and the inferior turbinate bones. — *Superior meatus* (of the nose), the passage in the nose between the turbinated parts (superior and inferior) of the ethmoid bone.

meaty (mē'tī), *a*. [*meat*¹ + *-y*¹] 1 Abounding in meat; fleshy, as, *meaty* cattle. — 2. Resembling meat, or characteristic of it, as, a *meaty* flavor. — 3. Figuratively, pithy, full of meaning or significance, condensed, as, a treatise giving much information in small compass.

I think any discussion of it [practice and theory in esthetics] would be likely to be rather more *meaty* than the inane speculations about the nature of the Beautiful and Sublime which fill so many pages of text books on esthetics. *G. S. Hall*, *German Culture*, p. 105.

meawt. An obsolete spelling of *meat*¹, *meat*².

meazel, *n.* See *measle*.

meazlet, *v.* See *mistle*, *mizzle*¹.

mebbe (mēb'ē), *adv.* A dialectal form of *maybe*.

meblet, *a* and *n.* See *mobile*¹.

mebate (mē-kā'tē), *n.* [Mex.] 1, A Mexican square measure, equal to about one tenth of an acre. — 2 A rope made of hair or of the fiber of the maguay. [Southwestern U. S.]

Mecca balsam. Same as *balm of Gilead*.

Meccan (mek'an), *a* and *n.* [*ME* *Mecca* (see *def*) + *-an*] 1. A Pertaining or relating to Mecca, a city of Arabia, the birthplace of Mohammed, and the chief holy city and pilgrim resort of the Mohammedan world.

Only about one third of the *Meccan* pilgrims proceed thither [to the tomb of Mohammed at Medina]. *Encyc. Brit.*, XIX 88.

II. *n.* A native or an inhabitant of Mecca.

mech. An abbreviation of *mechanics* and *mechanical*.

*mechal*¹ (mē'kal), *a*. [Early mod. E. *mechall*, *mechall*, < *L.* *machus*, < *Gr.* *μαίχός*, an adulterer.] Wicked; adulterous.

That done straight murder

One of thy basest Groomes, and lay you both

Grasp'd arme in arme on thy adulterate bed,

Then call in witness of that *mechal* sinne.

T. Heywood, *Rape of Lucrece*.

mecha-meck (mēch'h-mek), *n.* The wild potato-vine. See *Ipomœa*.

mechanic (mē-kan'ik), *a* and *n.* [*ME* *mechanike*, *mechanic art*, < *OF* *mechanique*, *F* *mécanique* = *Pr.* *mechanic* = *Sp.* *mecánico* = *Pg.* *mechanico* = *It.* *meccanico* (cf. *D. See *machine*. *Mechanic* is thus ult. the adj. to *machine*, but the words came into E. at different times and under different circumstances.] I. *a.* 1. Same as *mechanical*. now used chiefly in the phrase *the mechanic arts*.

Thrust some *mechanic* cause into his [God's] place,

Or blind in matter, or diffuse in space.

Pope, *Dunciad*, iv. 471.

But he [Pope] (his musical sense was such,
So nice his ear, so delicate his touch)
Made poetry a mere mechanic art.

Cowper, Table-Talk, I, 684.

Must sleepy bards the flattering dream prolong,
Mechanic echoes of the Mantuan song?

Crabbe, Works, I, 4

2† Belonging to or characteristic of the class
of mechanics; common; vulgar; mean

The poor mechanic porters crowding in
Their heavy burdens at his narrow gate
Shak, Hen V, I, 2, 200

3 Supporting the atomistic philosophy

These mechanic philosophers being no way able to give
an account thereof [of the formation and organization of
the bodies of animals] from the necessary motion of mat-
ter
Ray, Works of Creation, I

II. n 1†. Mechanic art; mechanics

Of him that ben artificers,
Whiche vseu crafts and misters,
Whose arte is cleped mechanic
Gower, Conf Amant, vii

2† Mechanism, structure

The fault being in the very frame and mechanic of the
part.
Bacon, Advancement of Learning, II, 194.

3 A maker of machines or machinery, hence,
any skilled worker with tools; one who has
learned a trade, a workman whose occupation
consists in the systematic manipulation and
constructive shaping or application of mate-
rials, an artificer, artisan, or craftsman. To
many persons whose business is partly mechanical the
term *mechanic* is inapplicable, as farmers, surgeons, and
artists. It implies special training, and is therefore in
applicable to unskilled laborers, though they may be en-
gaged in constructive work.

An art quite lost with our *mechanicks*, a work not to be
made out, but like the walls of Thebes, and such an artifi-
cer as Amphion
Sir T. Browne, Vulg Err, vii, 18.

Some plain mechanic, who, without pretence
To birth or wit, nor gives nor takes offence
Cowper, Retirement, I, 449

4. One who works mechanically, one who fol-
lows routine or rule in an occupation requir-
ing careful thought or study used opprobri-
ously as, a mere literary *mechanic*, the picture
shows the artist to be only a *mechanic* — *Mechanics*
institute, an institution for the instruction and recre-
ation of artisans and others of similar grade, by means of
lectures, a library museum, courses of lessons, etc. —
Mechanics' Men. See *Men*.

mechanical (mek-kān'ī-kal), *a* and *n* [*mechane*
+ *-al*] 1. *a* 1† Pertaining to or exhibiting con-
structive power, or of pertaining to mechanism
or machinery, also, dependent upon the use of
mechanism, of the nature or character of a
machine or machinery as, *mechanical* inven-
tions or contrivances, to do something by *me-
chanical* means

Arts *mechanical* contract brotherhoods in commonal
ties.
Bacon, Advancement of Learning, II, 116.

2 Machine-like, acting or actuated by or as
if by machinery, or by fixed routine, lacking
spontaneity, spirit, individuality, etc., as ap-
plied to actions, automatic, instinctive, uncon-
scious, etc. as, the *mechanical* action of the
heart, a *mechanical* musician

Any man with eyes and hands may be taught to take a
likeness. The process, up to a certain point, is merely
mechanical
Macaulay, History

I call that part of mental and bodily life *mechanical*
which is independent of our volition
O W Holmes, Old Vol of Life, p 261

Human action is either *mechanical* or intelligent, either
conventional or rational
J R Seeley, Nat. Religion, p 166.

3 Having the characteristics of that which is
produced by machinery or is artificially con-
trived, artificial, not spontaneous, not genu-
ine or of natural growth, lacking life or spirit,
humdrum.

None of these men of *mechanical* courage have ever
made any great figure in the profession of arms
Steele, Spectator, No 152.

Lalways thought fit to keep up some *mechanical* forms
of good breeding, without which freedom ever destroys
friendship
Goldsmith, Vicar, iv

It is the limitation to rigid instruments already pre-
pared, and to an external connection between them, that
gives *mechanical* work that uncanny appearance which
causes us to feel most repugnance to a comparison of it
with life
Lotze, Microcosmus (trans.), I, 72.

He would not tolerate a *mechanical* lesson, and took de-
light in puzzling his pupils and breaking up all routine
business by startling and unexpected questions and asser-
tions.
H B Store, Oldtown, p 425

4 Of or pertaining to the material forces of
nature acting on inanimate bodies or masses;
specifically, pertaining to the principles or laws
of mechanics as, the *mechanical* effects of frost;
the *mechanical* powers

The tumult in the parts of solid bodies when they are
compressed, which is the cause of all flight of bodies
through the air, and of other *mechanical* motions, is
not seen at all
Bacon, Nat. Hist., § 98.

5 Effected by material force or forces; con-
sisting in the play of material forces as, *me-
chanical* pressure.

I doubt, however, if a view which recognizes only a *me-
chanical* course of Nature can logically do anything with
such ideas as those of reverence, and so forth, but reckon
them among the morbid productions of imagination to
which nothing real corresponds, and of which it has al-
ready learnt to reject so many
Lotze, Microcosmus (trans.), II, 109

6 Exalting the material forces of the universe
above the spiritual; subordinating the spiri-
tual to the material, materialistic as, the *me-
chanical* philosophy (specifically, atomism), a
mechanical view of life.—7. Belonging to or
characteristic of mechanics or artisans, or their
class, *mechanic*-like; having the character or
status of an artisan, hence (chiefly in old writ-
ings), mean, low, or vulgar

Hang him, *mechanical* salt butter rogue
Shak, M W of W, II, 2, 280.

The lower part [containeth] the houses of artificers and
mechanical men that keepe their shops there
Coryat, Crudities, I, 217

8 Engaged in operating machines or machin-
ery, or in superintending their operation as, a
mechanical engineer.—9. Exhibiting or indi-
cating skill in contrivance, invention, or the
use of tools and machines as, a *mechanical*
genius, a *mechanical* turn of mind.—10. Ef-
fected or controlled by physical forces that are
not chemical as, a *mechanical* mixture (that
is, one in which the several ingredients still re-
tain their identity, and are held together by
no special force whether of cohesion or chemi-
cal attraction), *mechanical* decomposition —

Mechanical construction of a curve, a construction
performed by means of a *mechanical* contrivance — **Me-
chanical curve** See *curve* — **Mechanical drawing**

Same as *geometrical drawing* (which see, under *drawing*)

nouns. — **Mechanical equivalent of heat**. See *equiva-*

lent — **Mechanical imperfector**, *involution*, *leech*.
See the nouns. — **Mechanical lamp** Same as *arc lamp*

— **Mechanical line** See *line* — **Mechanical manov-**

ers (*mist*), the mounting, dismounting, and transpor-
tation of cannon and gun carriages — **Mechanical mix-**

ture. See *chemical combination* under *chemical* — **Me-
chanical philosophy**, physics considered as affording a
basis for philosophy or the explanation of the universe —

Mechanical pigeon See *pigeon* — **Mechanical pow-**

ers, the simple machines. See *machine*, 2 — **Mechanical**

solution of a problem, a solution by any art or
contrivance not strictly geometrical, as by means of the
ruler and compasses or other instruments — **Mechanical**

stage, in *micro* See *microscope* — **Mechanical tele-**

graph, an automatic telegraph in which a message rep-
resented by a series or succession of dots on a paper ribbon
is passed under a key or stylus, the circuit being made or
broken by the simple mechanical passing through of the
ribbon — **Mechanical theory in mind**, an ancient theory

that all diseases were principally caused by lentor, or mor-
bid viscosity of the blood — **Mechanical work**, work con-
sisting in the moving of a body through space, generally in
opposition to gravity — **Rocks of mechanical origin**, in
geol. rocks composed of sand, pebbles, fragments, and the
like — a term used by some (not aptly) as the equivalent of
clastic or *fragmental* — **Syn. Mechanical, Physical, Chemi-**

cal. These epithets are thus distinguished. Those changes
endured by bodies which concern their masses without
altering their constitution, i. e. losing their identity —

such as changes of place, of figure, etc., are *mechanical*,
those which concern the position of the molecules — i. e.
which change the molecular state of bodies, as when
iron is melted — are *physical*, those which concern the
number or arrangement of atoms within the molecule
and cause a change of constitution are *chemical*, as when
iron rusts — i. e. oxidizes — or gunpowder explodes

matically, not spontaneously as, to play on
an instrument *mechanically*

Guards, *mechanically* formed in ranks
Cowper, Table-Talk, I, 136

4 Without loss of the constitution or identity
of elements, in a manner involving change of
place or figure without change of structure or
constitution, without the aid of chemical at-
traction: as, elements *mechanically* united in
air; a body *mechanically* decomposed

mechanicalness (mek-kān'ī-kal-ness), *n*. The

mechanics (mek-kān'īks), *n* [Pl of *mechane*
see *-ics*] 1 The theory of machines. This is
the old meaning of the word especially before the devel-
opment of the modern doctrine of force

I do not here take the term *Mechanics* in that stricter
and more proper sense wherein it is wont to be taken
when it is used only to signify the doctrine about the
moving powers (as the beam, the lever, the screws, and the
wedge), and of framing engines to multiply force, but I
here understand the word *Mechanics* in a larger sense,
for those disciplines that consist of the applications of
the pure mathematics to produce or modify motion in
inferior bodies
Boyle, Works, III, 436

2 The mathematical doctrine of the motions
and tendencies to motion of particles and sys-
tems under the influence of forces and con-
straints, in a narrower sense, this doctrine as
applied to systems of rigid bodies. *Mechanics*
is now commonly divided into *kinematics* and *dynamics*,
and the latter into *statics* and *kinetics*. *Mechanics* treated
by means of the infinitesimal calculus is called *analytical*
mechanics. The fundamental principles of *mechanics*
are stated under *energy* and *force*, but the science is char-
acterized by the great number of derived principles made
use of. See *principle*

Newton defined the laws, rules, or observed order of the
phenomena of motion which come under our daily obser-
vation with greater precision than had been before at-
tained, and, by following out with marvellous power and
subtlety the mathematical consequences of these rules,
he almost created the modern science of pure *mechanics*.

matists the *Roman medallions* are generally struck in copper, though sometimes in the precious metals, and bear a general resemblance to the sestertii or large bronze coins of the earlier Roman emperors, but they are often of finer workmanship than the coins and are not inscribed with the letters S C (for *senatus consulto*). These medallions (the ancient name of which is not known) did not circulate as money but were given by the emperors as presents to state officials and others. Their types are of a more or less commemorative character.

Medallions [were] in respect of the other coins, the same as modern medals in respect of modern money. They were exempted from all commerce, and had no other value but what was set upon them by the fancy of the owner. They are supposed to have been struck by emperors for presents to their friends, foreign princes, or ambassadors. *Addison*, *Ancient Medals*, III 2 Anything resembling the classical medallion (a) A circular or oval disk decorated with figures as a portrait with legends and cast in metal. Medallions of this sort were common at the epoch of the Renaissance and are among the most interesting specimens of the sculptures of that time. (b) In *arch*, a tablet, circular, oval, square, or of any other form, bearing on it objects represented in relief, as figures, heads, animals, flowers, etc., and applied to an exterior or interior wall, a frieze, or other architectural member, a cartouche. mediatization (mē'di-ā-ti-zā'shon), *n* [*< mediatize + -ation*] The act of mediatizing, or the state of being mediatized. *See mediatize.*

mediatize (mē'di-ā-tiz), *v. t.*; pret and pp *mediatized* ppr *mediatizing* [*< mediate + -ize*] 1. To make mediate; reduce from an immediate or direct to a mediate or indirect relation through the interposition of a secondary superior or controlling agency. Applied specifically to the process of converting one of the minor German states or princely families of the old empire from the semi-independent condition of having a direct share in the imperial government, and responsibility to it to that of subordination to an intervening power by being annexed to it while retaining all local possessory and governmental rights.

By this process, especially under the Westphalian treaties of 1648, and the changes leading to the dissolution of the old empire and the formation of the Confederation of the Rhine in 1806, the number of mediatized states and princely families became very large.

The same peace [that of Unéville] declared that all the secular princes who had lost territory by this cession were to be indemnified by the Empire. This was done at Regensburg in 1803. The indemnifying material was obtained by *mediatizing* all the free cities but six, and all the spiritual estates but two. *Loew, Bismarck, Int. p. vi.*

Hallam, Middle Ages
Medieval architecture, the most important branch of medieval art, including a great number of varied styles. This architecture embodies a union of the Greek system

about A. D. 300, in the palace of the Emperor Diocletian at Spalato, in which arcades were introduced supported on free-standing shafts instead of the Roman piers with engaged columns, and in which the profile of the architrave was continued around the archivolt, which had usurped the architrave's function, and now sprang directly from the capital, abandoning the meaningless Roman interposition between archivolt and column of a small section of a mock entablature. Despite local differences, medieval architecture represents a continuous development from the classical Roman to the modifications wrought by the Renaissance. At its origin, copying Roman models, it was poor and rude, owing to the lack of skill and of resources in its builders. Every succeeding generation sought to perfect the system of vaulted ceilings to which the characteristic forms of this architecture are due. The application of the Roman groin vault was extended and brought into new combinations, the pointed arch and vault were evolved, as possessing more stability and elasticity than the old round arched forms, and finally the use of ribs to strengthen and support the vault was elaborated. By about 1225 medieval architecture could solve with the utmost economy and artistic excellence any problem that could be presented to masonry construction. From about 1250 architects, embarrassed no longer by inherent difficulties, began to lose the simple beauty of their style in unnecessary elaboration of details as in complicated window-traceries and in distorted profiles of moldings, and architecture progressively declined, so that the simplification of external forms effected by the Renaissance was a gain. But the sound and scientific medieval methods of construction remained in great part beneath the Renaissance exterior, and indeed are not yet wholly abandoned, especially in France. Many fanciful theories have been formed as to the origin of medieval architecture, especially that deriving its groin vaulting from an imitation of the lines of interlacing branches in an avenue of trees. It was, however, in fact a thoroughly logical growth from classical models, and the result of consistent efforts to adapt means to the ends sought. Thus, the problem in a great church or hall was to cover in securely a large space with as few interruptions as possible to sight and sound, hence the tendency to widen the arches and to reduce the thickness of the pillars. The great height of such buildings was not induced by a desire to "soar heavenward," but by the necessity to secure light for the nave by windows pierced above the roofs of the aisles. The typical decoration of this architecture is of the highest beauty and fitness, ornamenting but not masking the construction, and, while based chiefly on natural forms, it always, until the decline of the style, conventionalized these appropriately to their architectural function. This architecture attained its best development in France. See *Byzantine, Romanesque, Pointed, etc.* — **Medieval art**, the art of the entire middle ages in Europe beginning in the gradual transformation of classical forms and ideals, and extending to the Renaissance, or, roughly, to the year 1500, though in Italy it actually became merged earlier in the new current of modern art, and in the north, as in England and Germany, it continued later. It embraces a countless number of regional and local styles and schools, yet all animated by a kindred spirit. It is second in importance in art-history only to the art of Greece, and, while in many ways it fell far short of Greek art, the course of its development from rude beginnings was very similar, and, like the Greek, presents a consecutive and sincere effort on the part of succeeding craftsmen and artists constantly to do better. Its ideal of beauty was less high than that of the Greeks, it was more of a didactic art, seeking, in its illuminations and painting and sculpture, to illustrate and enforce the teachings of the Bible and the inherent imperfection of man. Yet the general similarity of methods of observation and work was so close that in France especially, after the close of the archaic period in the thirteenth century, much figure sculpture was produced, as that in the portals of the cathedral of Rheims and on the north transept of that of Rouen, which is in spirit thoroughly Greek, and is equal to all but the best Greek draped work. In decoration medieval art was predominant. Like Greek art, it was understood and appreciated not by a small cultivated class, but by the whole people. It consistently sought to give to the commonest tools and utensils beautiful forms and characteristic ornament, while the architectural sculpture and decorative combinations of forms have never been surpassed in their variety, in their beauty of execution, and in their fitness to the ends which it was sought to attain. To the general artistic sentiment, religious fervor, and emulative spirit of the period most of the great cathedrals, embodying, like a Greek temple, the best architecture and sculpture and the best decoration of the day, owe their origin. — **Medieval history**, Latin, etc. See the nouns.

Medinilla (mē-di-nil-lā), *n* [*NL (Gaudichaud, 1826), named after D J de Medinilla y Pineda, governor of the Marianne Islands*] A genus of plants of the natural order *Melastomaceae*, type of the tribe *Medinilleae*. It is characterized by eight, ten, or twelve nearly equal stamens, the connective of the anthers two lobed or spurred in front and with two lobes or one spur at the back, and a calyx tube scarcely longer than the ovary. About 75 species are known, natives of the East Indies, the Malay archipelago, Madagascar, and the islands off the west coast of Africa. They are erect or climbing shrubs generally quite smooth, with opposite or whorled entire fleshy leaves, and clusters of white or rose colored flowers. Several of the species are very ornamental. The most common greenhouse species is perhaps *M. magnifica*, a beautiful plant with pink flowers.

Medinilleae (mē-di-nil-lē-ē), *n*, pl. [*NL (Benthams and Hooker, 1867), < Medinilla + -ae*] A tribe of plants of the natural order *Melastomaceae*, typified by the genus *Medinilla*. It is distinguished by a berry like or coriaceous fruit, which breaks open irregularly, by having the stamens usually equal and recurved with a connective lobed or spurred both at the back and in front, or only posteriorly, and by leaves which are not stipulate between the primary nerves. The tribe includes 12 genera and about 145 species, all natives of the Old World

Specifically — (a) In *painting*, any liquid vehicle, as linseed-oil, poppy-oil, varnish, or water, with which dry pigments are ground, or with which pigments are mixed by the painter while at work in order to give them greater fluidity. (b) In *acoustics*, a ponderable elastic substance, as air or other gas, water, etc., which transmits the energy of the sound in waves of condensation and rarefaction to the ear. (c) In *heat* and *light*, that which transmits the energy of the heated or luminous body to a distance in undulatory waves, the ether. (d) In *biology*, the nutritive substance, either a liquid or a solid, in which or upon which the various forms of microscopical life are grown for study. The liquid media employed are infusions of yeast, extract of beer yeast, and broth of various kinds of meat. The solid media most used are eggs, slices of potatoes and carrots, agar-agar, and especially gelatin and the gelatinized serum of the blood of oxen. After being thoroughly sterilized by heat, they are usually placed in test-tubes, and inoculated with the form that it is desired to study, the cultures may then be observed through the glass.

3. A person through whom, or through whose agency, another acts; specifically, one who is supposed to be controlled in speech and action by the will of another person or a disembodied being, as in animal magnetism and spiritualism; an instrument for the manifestation of another personality. Many of the so-called spiritual mediums claim the power of acting upon and through matter, by means of the spirits controlling them, in a manner independent of ordinary material conditions and limitations. In this sense the plural *mediums* is preferred.

Although particular persons adopted the profession of *media* between men and Elohim there was no limitation of the power, in the view of ancient Israel, to any special class of the population
Buxley, in Nineteenth Century, XIX 384

medulla (mē-dul'ā), *n* [= *F médulle* = *Sp medula* = *Pg medulla* = *It medolla*, *medolla*, **<** *L medulla*, marrow, pith, kernel, **<** *medius*, middle see *medium*.] 1 In anat and zool (*a*) Marrow. [Little used] (*b*) The so-called spinal marrow, the spinal cord, or central axis of the nervous system, the myelon more fully called *medulla spinalis* (*c*) The hindmost segment of the brain, continuous with the spinal cord, the afterbrain or metencephalon; the oblongata, more fully called *medulla oblongata* (*d*) The ventral ganglionic chain of the nervous system of some invertebrates, as *Vermes*, supposed to be analogous to the spinal cord of vertebrates (*e*) The pith of a hair (*f*) The myelin, or white and fatty covering of the axis-cylinder of a nerve—2 In bot, the pith of plants

(*a*) In exogens, the central column of parenchymatous tissue about which the wood is formed (*b*) In heteromorous lichens, the innermost stratum of colorless tissue composing the thallus. It exhibits three well marked forms (1) the woody composed of simple or branched entangled filaments (2) the crustaceous, which is tartareous in appearance (3) the cellulose, which consists of angular, rounded, or oblong cellulose—Columns of the *medulla oblongata*. See *column*.—*Medulla oblongata*. See def 1 (*c*), see also *brain*. *Medulla spinalis*. See def 1 (*b*).

medullar (mē-dul'ār), *a* [= *F médullaire* = *Sp medular* = *Pg medullar* = *It medollare*, **<** *L medullaris*, situated in the marrow, **<** *L medulla*, marrow see *medulla*] Same as *medullary* [Rare]

These little emissaries united together at the cortical part of the brain make the medullar part, being a bundle of very small, thin delicate channels of fibres

G Chene, Philosophical Principles

medullary (med'n-lā-rī), *a* [As *medullar*]

1 In anat and zool, pertaining to marrow or medulla, or resembling it in form or position; myelonal as, medullary substance, a medullary cavity, medullary cancer, a medullary foramen—2 In bot, composing or pertaining to the medulla or pith of plants See phrases below.

—**Medullary axis**, in lichens, same as medullary layer—**Medullary cancer** Same as *encephaloid cancer* (which see, under *encephaloid*)—**Medullary cavity**, in embryo (*a*) The hollow of the primitively tubular spinal cord

The primitive medullary cavity which persists as the central canal, remains open in the lumbar swelling of birds
Gegenbaur Comp Anat, p. 512

(*b*) The hollow of a bone which contains marrow **Medullary foramen** See *foramen* **Medullary furrow or groove**, in embryo the primitive trace of furrow of a vertebrate embryo, or a corresponding formation in an invertebrate so called from being the site of a future medulla

As the medullary groove deepens its edges become more sharply defined, and its inner border comes close down to the endoderm, thus forming around the two halves of the medulla
Buch's Handbook of Med Sciences, III 174

Medullary layer, in lichens See *medulla*, 2 (*b*) **Medullary plate**, in embryo one of the lips of the medullary groove—**Medullary rays** the radiating vertical bands or plates of parenchymatous tissue in the stems of exogenous plants popularly called the *silver grain*

Longitudinal and radial section through the wood of a branch of maple one year old. 1 Pith. 2 Bark. 3 Longitudinal and radial section of the same wood showing the ends of the medullary rays

There are two kinds—the primary, which extend from the pith (medulla) to the cortex, and the secondary, which are shorter than the primary. The rays may be simple, consisting of a single cell or a single layer of isodiametric cells as in many conifers, or compound, consisting of more than one layer of superimposed cells, as in most dicotyledons. **Medullary sheath**, in bot a narrow zone made up of the innermost layer of woody tissue immediately surrounding the pith in plants. **Medullary tube**, the spinal cord in the primitive tubular stage

medullated (med'n-lā-ted), *a* [**<** *L medulla*, marrow, + *-ate* + *-ed*] Having a medulla

The [spinal] cord will be seen to be mainly made up of medullated nerve fibres
Martin Human Body, p. 177

medullin (mē-dul'in), *n* [**<** *L medulla*, pith, + *-in*] A name given by Brucenot to the cellulose obtained from the pith or medulla of certain plants, as the sunflower and hick

medullispinal (mē-dul-i-spī'nal), *a* [**<** *L medulla*, marrow, pith, + *spina*, spine see *spinal*] Pertaining to the medulla spinalis, spinal marrow, or spinal cord

The medullispinal or proper veins of the spinal cord lie within the dura mater
Holden, Anat (1865), p. 794

medullitis (med-u-lī'tis), *n* [**NL**, **<** *medulla*, marrow, + *-itis*] In pathology same as *myelitis*.

medullose (med'u-lōs), *a* [= *F médulleux* = *Sp meduloso* = *Pg meduloso* = *It medoloso*, **<** *L medullinosus*, full of marrow, **<** *medulla*, marrow, pith see *medulla*] Having the texture of pith *Maunder*

Medusa (mē-dū'sā), *n* [*L Medusa*, **<** (*h*) *Mēdon-aa*, a fem name, orig fem of *mēdon*, a ruler, ppr of *mēdon*, rule] 1 In *Gr myth*, one of the three Gorgons, the only one of them who was mortal. She was slain by Perseus, with the aid of Athena and her serpent-entwined head was so awful that its sight turned all beholders to stone. It was after ward borne by Athena on her aegis or on her shield. The later artists beautified the grinning head of Medusa, retaining only the writhing serpents of the legend. See *Gorgon* and *capit*

2. Pl. medusa (-s) In *soil*: (a) [*l. c.*] A jelly-fish, sea-jelly, or sea-nettle; an aculeph, in a strict sense; a discophoran or discophorous hydrosolan; any member of the family *Medusidae* or order or subclass *Discophora*. A term very loosely used, and now chiefly as an English word. See *medusoid*, *n* (b) [*cap*] [*NL*] An old genus of jelly-fishes, used with great and varying latitude, more or less nearly equivalent to the order *Discophora* or family *Medusidae*, now greatly restricted or entirely discarded. In the latter case *Aurelia* is used instead. See cut under *aculeph*. [In this sense there is no plural.] (c) [*l. c.*] Some hydrosolan resembling or supposed to be one of the foregoing, a medusoid as, the naked-eyed medusa of Forbes, which are the reproductive zooids or gonophores of gymnoblastic hydroids.

medusa-bell (mē-dū'st-bel), *n*. The swimming-bell, gelatinous disk, or umbrella of a medusa.

medusa-bud (mē-dū'st-bud), *n*. A budding medusa, a rudimentary medusa, or one not detached from its stock, forming a generative bud or gonophore.

Medusae (mē-dū'sē), *n pl* [*NL*, pl. of *Medusa*] Jelly-fishes, aculephs proper, or discophorans, as a family or higher group of the *Hydrozoa*, equivalent to *Medusidae* or *Discophora*, 1.

medusal (mē-dū'sal), *a* [*NL* *Medusa* + *-al*] Same as *medusan*. *Nature*, XXXVIII 356

medusan (mē-dū'san), *a* and *n* [*NL* *Medusa* + *-an*] 1. *a* Of, pertaining to, or resembling a member of the family *Medusidae*.

II. n A hydrosolan of the family *Medusidae*.

Medusa's-head (mē-dū'skz-hed), *n* 1. A basket-fish, basket-urchin, or sea-basket; a euryalean ophiurian or branching sandstar of the family *Astrophytida*. Also *medusa-head* and *medusa-headstar*. See cut under *basket-fish*.

2. An extant erinoid of the genus *Pentacrinus*, *P. caput-medusae*—3 In bot, the plant *Euphorbia Caput-Medusae*—**Medusa's-head orchid**. See *orchid*.

medusian (mē-dū'si-an), *a* and *n* [*NL* *Medusa* + *-ian*] Same as *medusan*.

Medusidae (mē-dū'si-dē), *n pl* [*NL*, < *Medusa* + *-ida*] The medusae, aculephs, discophorans, or jelly-fishes, as a family of *Hydrozoa*, typified by the genus *Medusa* proper. The hydrosome is free and oceanic, consisting of a single nectocalyx or swimming bell, from the roof of which one or several polypites are suspended. The nectocalyx is furnished with a system of canals, and a number of tentacles depend from its margin. The reproductive organs appear as processes either of the sides of the polypite or of the nectocalyxine canals. The family as thus defined is coextensive with the order or subclass *Discophora*, and equivalent to *Medusae* 2 (b), but the term is often used in a much more restricted sense, as synonymous with *Aureliidae*.

medusidan (mē-dū'si-dan), *a* and *n* 1. *a* Of or pertaining to the *Medusidae*.

II. n One of the *Medusidae*.

medusiform (mē-dū'si-fōrm), *a* [*NL* *Medusa* + *L form*, form] Resembling a medusa in form; medusoid, in the form of a bell; campanulate. —**Medusiform bud**, a budding medusoid contained in the gonophore of some hydrosolans.

medusite (mē-dū'sit), *n* [*NL* *Medusa* + *-ite*, *E* -ite²] A fossil medusa or aculeph. Notwithstanding the softness of jelly fishes, fossil traces of some have been found in the lithographic slate of Solenhofen in Bavaria.

Medusites (med-ū-si'tēz), *n* [*NL* see *medusite*] A generic name of certain fossil medusae.

medusoid (mē-dū'soid), *a* and *n* [*NL* *Medusa* + *Gr* *eidōs*, form.] 1. *a*. Like a medusa; resembling a medusa in form or function; medusiform as, a medusoid bud; the medusoid organization. Sometimes *aculephoid*. —**Medusoid bud**, the generative bud or gonophore of a fixed or free hydrosolan.

II. n 1 The medusiform generative bud or receptacle of the reproductive elements of a hydrosolan, whether it becomes detached or not. Such an organism constitutes the middle stage in the process of metagenesis. The gonophore may present every stage of development and degree of complication until it becomes medusiform or bell-shaped, when it is called a medusoid from its resemblance to a medusa or jelly fish.

2 Loosely, any medusa, medusidan, or medusoid organism.

meel¹, *pron*. An obsolete spelling of *meel*.

meerschaum (mēr'shām or -shum, *G. pron.* mār'shōum), *n* [*< G. meerschaum*, lit. 'sea-foam,' < *meer*, the sea (= *E. mere*¹), + *schaum*, foam, froth, = *E. scum*] 1. A hydrated silicate of magnesium, occurring in fine white clay-like masses, which when dry will float on water; sepiolite. The name, from the German for 'sea foam,' alludes to the lightness and the snow white color. It is found in various regions, but occurs chiefly in Asia Minor, Livadia, and the island of Euboea.

When first taken out it is soft, and makes lather like soap. It is manufactured into tobacco pipes, which, after being carved or turned, are baked to dry them, then boiled in milk, polished, and finally boiled in oil or wax.

Artificial meerschaum is made from the chips and waste left from meerschaum-cutting, consolidated by pressure.

Meerschaum is imitated also in plaster of Paris, treated with paraffin and colored with gamboge and dragon's blood, and in other ways.

2 A pipe made from this substance. Such pipes are valued from their taking a rich brown color from the oil of tobacco gradually absorbed by the material.

megalithic (meg-a-līth'ik), *a*. [*Gr megalith* + *-ic*.] Consisting of megaliths or very large stones as, *megalithic monuments*; the *megalithic architecture* (uro of Egypt). The word *megalithic*, however, as now almost exclusively used, has reference to a peculiar class of monuments or remains, of which the most essential feature is that the stones used in their construction in a vast majority of cases have nearly or quite their natural form. Hence these remains, in so far as they consist of stone, have been designated as "rude stone monuments." The stones used in them are frequently, but not always, of very large size. The menhir and dolmen are perhaps the most characteristic of the various forms of megalithic construction (see these words), but circles and avenues or alignments of standing stones, as well as tumuli or barrows of earth, either covering or inclosing dolmens, and frequently surrounded by one or more rows or circles of upright stones are almost equally common and characteristic. The region especially notable for the number and variety of its megalithic remains extends from northern Africa through France and Great Britain to Scandinavia. The most remarkable display of the various forms is in Algeria, in Brittany, in Cornwall and various districts in southwestern England and Wales, as well as in parts of Ireland and Scotland, also in northern Germany, Denmark, and southern Scandinavia. There are also great numbers of dolmens and tumuli in India, especially in the hills of Khasia, where such monuments as still being erected. To the same primitive period (the Neolithic) of rude savage life must be assigned the rudiments of architectural skill pertaining to the *Megalithic Age*. Everywhere we find traces, alike throughout the seats of oldest civilization and in earliest written records, including the historical books of the Old Testament Scriptures, of the erection of the simple monolith, or unshewn pillar of stone, as a record of events, a monumental memorial, or a landmark.
Encyc. Brit., II 338.

But it is in Egypt that megalithic architecture is seen in its most mature stage, with all the massiveness which so aptly symbolizes barbarian power.
Encyc. Brit., II 338.

The megalithic structures, menhirs, cromlechs, dolmens, and the like have been kept up as matters of modern construction and recognized purpose among the rude indigenous tribes of India.

which the eyes are enormous. The term is retained as the designation of this condition, commonly known as the *megalops* or *megalops stage*. First called *megalops* (W. E. Leach, 1815).

In the higher Decapoda the eyes frequently give rise to a *Megalops*, with very large, stalked eyes, and the complete number of appendages, from which, by a series of molts, the adult form is produced. *Stand. Nat. Hist.*, II 11

3. A genus of rove-beetles or staphylinids, containing a few small species of America and Africa. *Dejean*, 1833—4. A genus of reptiles *megalopsia* (meg-a-lōp'si-ā), n. [NL., < Gr μέγας (mégas), great, large, + ὤψ, eye.] A pathological condition of the eyes in which objects appear enlarged

megalopsychy (meg-a-lōp-si'ki), n. [< Gr μεγαλοψυχία, greatness of soul, < μεγαλόψυχος, great-souled, high-souled, < μέγας (mégas), great, + ψυχή, soul.] Magnanimity; greatness of soul. *Coler.*, 1717. [Rare.]

Megaloptera (meg-a-lōp'te-rā), n. pl. [NL., < Gr μέγας (mégas), great, large, + πτερόν, wing, = E feather.] A tribe of Neuroptera, containing the families Myrmeleontidae, Hemerobiidae, and Mantispidae. *Latreille*, 1803

Megalopteris (meg-a-lōp'te-ris), n. [NL., < Gr μέγας (mégas), great, + πτερίς, a fern.] A genus of fossil ferns established by Dawson (1871), which is related to *Neuropteris* by its nervation, and to *Alethopteris* by the position of the leaflets. The fronds are very large and simply pinnate. This genus (according to Lesquereux not separable from *Dana*) except by the characters of the venation) is found in the Devonian of New Brunswick, in the Subcarboniferous of West Virginia, and also in the coal measures of Illinois and Ohio

The fragments (referred to *Megalopteris*) pertain to a group of ferns which, at the beginning of the Carboniferous epoch, represents this family by plants as remarkable by their magnitude as by the elegance and beauty of their forms. *Lesquereux*, Coal Flora of Pennsylvania, p. 152

Megalornis (meg-a-lōr'nis), n. [NL., < Gr μέγας (mégas), great, large, + ὄρνις, bird.] 1. Same as *Grus*. 1. G. R. Gray, 1840.—2. A genus of huge fossil birds founded by Seeley upon a fragmentary tibia from the Eocene of Shoppey, England. It was the same specimen that had been referred to *Lithornis* by Bowerbank, the true *Lithornis* of Owen, 1841, being regarded as different. A species has been called *M. emutinus*, from its supposed relationship to the emu.

megalosaur (meg-a-lō-sār), n. [< NL *Megalosaurus*.] A dinosaur of the family *Megalosauridae*.

megalosaurian (meg-a-lō-sā'ri-an), a and n. [< NL *Megalosaurus* + -ian.] I. a Having the characters of a megalosaur II. n A megalosaur

Megalosauridae (meg-a-lō-sā'ri-dē), n. pl. [NL., < *Megalosaurus* + -idae.] A family of dinosaurs with biconcave vertebrae, pubes slender and united distally, and tetradactyl feet, typified by the genus *Megalosaurus*.

megalosauroid (meg-a-lō-sā'roid), a. and n. [< NL *Megalosaurus* + Gr εἶδος, form.] Same as *megalosaurian*.

Megalosaurus (meg-a-lō-sā'rus), n. [NL., < Gr μέγας (mégas), great, large, + σαῦρος, a lizard.] A genus of dinosaurian reptiles, typical of the family *Megalosauridae*, established by Buckland upon remains indicating a gigantic terrestrial reptile of carnivorous habits. The size has been variously estimated at from 30 to 40 and even 50

Skull of *Megalosaurus*

1. *Megalosaurus* (restored) 2, tooth 3, part of jaw

feet in length. The femur and tibia were each about 3 feet long. The remains of megalosaurs have been found in abundance in the Oolite

megalosplen (meg-a-lō-splē'n-ā), n. [NL., < Gr μέγας (mégas), great, large, + σπλήν, the spleen.] In *pathol.*, enlargement of the spleen.

Megalotina (meg-a-lō-ti'nē), n. pl. [NL., < *Megalotis* + -ina.] A subfamily of *Camidae*, represented by the genus *Megalotis*, having enormously large ears, three true tubercular molars of upper jaw, and short sectorial teeth of both jaws

megalotine (meg-a-lō'tin), a. [< Gr μέγας (mégas), great, large, + ὤψ (ōps) = E ear.] Having large ears, as a fox; specifically, of or pertaining to the *Megalotina*

Megalotis (meg-a-lō'tis), n. [NL., < Gr μέγας (mégas), great, + ὤψ (ōps) = E ear.] 1. The typical genus of *Megalotina*, founded by Illiger in 1811. *M. lalandi* is the large-eared fox of Africa. The genus is also named *Agraudus* and *Otocyon*—2. A genus of African and Indian larks of the family *Alaudidae*, named by Swainson in 1827. See *Pyrrhuloxia*

Megamastictora (meg-a-mas-tik'tō-rā), n. pl. [NL., < Gr μέγας (mégas), great, + μαστίγας, a scourge, < μαστίξ (mastix), a whip, scourge.] In Sollas's classification of sponges, one of two main branches of the phylum *Paraspongia* or *Spongia*, characterized by the comparatively large size of the choanocytes, which are 0.005 to 0.009 millimeter in diameter, the chalk-sponges contrasted with *Micromastictora*

megamastictoral (meg-a-mas-tik'tō-rā), a. [< *Megamastictora* + -al.] Having large choanocytes, as a chalk-sponge, of or pertaining to the *Megamastictora*

Megamys (meg-a-mis), n. [NL., < Gr μέγας (mégas), great, large, + μῦς, mouse.] A genus of fossil hystriomorphous rodents from the Eocene of South America, of the family *Octodontidae*. *D'Orbigny*.

megaphone (meg-a-fōn), n. [< Gr μέγας (mégas), great, + φωνή, sound. Cf. *megalophonus*.] An instrument devised by Edison for assisting hearing, adapted for use by deaf persons or for the perception of ordinary sounds at great distances. It consists essentially of two large funnel shaped receivers for collecting the sound waves, which are conducted to the ear by flexible tubes

Megaphyton (me-gaf'i-ton), n. [NL. (Artis, 1825), < Gr μέγας (mégas), great, large, + φυτόν, plant.] A fossil fern-stem found in the coal-measures of Europe and America. This fossil belongs to the trunk of a tree fern, and is marked by large scars, which are sometimes nearly square in outline and sometimes transversely oval, and placed in opposite biserial rows. The internal disks of the scars often have horseshoe shaped vascular impressions. This fern occasionally grew to a very considerable size, having scars three inches wide

megapod (meg-a-pōd), a and n. [< Gr μέγας (mégas), great, large, + πούς (pod-) = E foot. Cf. Gr μεγαποδῶν, having large feet.] I. a Having large feet specifically applied to the *Megapodidae* II. n One of the *Megapodidae*

megapodan (me-gap'ō-dan), a and n. Same as *megapod*

megapode (meg-a-pōd), n. Same as *megapod*. A. Newton

Megapodidae (meg-a-pōd'i-dē), n. pl. [NL., < *Megapodus* + -idae.] Same as *Megapodidae*

Megapodiidae (meg-a-pō-di'i-dē), n. pl. [NL., < *Megapodidae* + -idae.] A family of poristeropodous alcedoromorphous birds of the order *Galinae*, typified by the genus *Megapodius*, the megapods or mound-birds, the jungle-fowls of Australia. They have relatively large feet, with four toes on a level, as in the American curassows or *Crauidae*, which latter the megapods represent in the Australasian region. They are known as mound birds from their singu-

lar and characteristic habit of scraping up heaps of soil and decaying vegetable substances, in which the eggs are buried and left to be hatched by the heat of the decomposing mass. The eggs are buried to the depth of several feet. The chicks hatch feathered and able to fly. The birds inhabit brush and scrub, usually by the seaside, and go sometimes in pairs, sometimes in large companies. They are about the size of common fowl, and are generally of somber

color. The family is divided into *Megapodinae* and *Talegallinae*. See these words, and *Megapodius*. Usually *Megapodidae*.

Megapodinae (meg-a-pō-di'i-nē), n. pl. [NL., < *Megapodius* + -inae.] A subfamily of *Megapodidae* contrasting with *Talegallinae*, containing two genera, *Megapodius* and *Tepoa*, mound-birds or megapods proper

Megapodius (meg-a-pō-di'us), n. [NL., < Gr μέγας (mégas), great, large, + πούς (pod-) = E foot.] The typical and principal genus of *Megapodidae*, established by Quoy and Gaimard in 1824. It contains all the *Megapodinae* excepting *Leopoldia ocellata*. In all upward of 20 species. The Australian *M. tumulus*, figured above, is a characteristic example

megapolis (me-gap'ō-lis), n. [< Gr μέγας (mégas), great, + πόλις, city. Cf. *megalopolis*.] A metropolis. Amadavad is at this present the *megapolis* of Iran. *Amadavad*. *Su T. Herbert*, travels in Africa p. 64

Megaptera (me-gap'te-rā), n. [NL., < Gr μέγας (mégas), great, + πτερόν, wing, = E feather. Cf. *Megaloptera*.] A genus of finned whalebone-whales, the humpbacks belonging to the family *Balaenopteridae*, and typical of the subfamily *Megapterinae* established by J. E. Gray in 1846. They have a low dorsal fin, folds of skin on the throat free cervical vertebrae, short broad baleen plates and very long narrow flippers with only four digits. Numerous species have been described, from all seas, such as the long finned whale *M. longimanus*

Megapterinae (me-gap'te-rī'nē), n. pl. [NL., < *Megaptera* + -inae.] A subfamily of *Balaenopteridae* or finner-whales, typified by the genus *Megaptera*, the humpbacks. The low dorsal fin forms a characteristic hump on the back. The long manus has the four digits composed of numerous phalanges, and the throat is plicated. The genera are three: *Megaptera*, *Poseocarpa*, and *Echirochima*

megapterine (me-gap'te-rīn), a and n. [As *Megaptera* + -ine.] I. a Having long fins, as a finner-whale, belonging to the *Megapterinae* II. n A member of the *Megapterinae*

Megarhynchus (meg-a-rīng'kus), n. [NL., < Gr μέγας (mégas), great, large, + ῥυγχος, snout, bill.] A genus of American tyrant flycatchers, of

Megarhynchus pitangus life size

the family *Tyrannidae*, of which *M. pitangus* of Brazil is the type, characterized by an enormous bill. *M. mexicanus* of Mexico and Central America and *M. chrysogaster* of Ecuador are other species. The genus was named by Humboldt in 1824, and is also called *Soaphorhynchus*, *Platyrhynchus*, and *Megastoma*

Megarian (me-gā'ri-an), a. [< L. *Megara*, < Gr Μέγαρα, pl. Megara (app. pl. of μέγας, hall, chamber, in pl. palace, caves (cells or chapel) of Demeter. See *megaron*), + -ian.] Of or belonging to Megara, a city of ancient Greece, or to Megaris, a territory between Attica and Corinth, of which it was the capital. Megarian — *Megarian school*, a school of philosophy founded at Megara about 400 B. C. by Euclid, a native of that city, and a disciple of Socrates. The philosophers of this school taught that the only reality is the incorporeal essence, that the material world has no real existence, that change is inconceivable, that only the actual is possible, that the good is the only real, and that virtue is the knowledge of the good. The school made much of sophisms, and cultivated a sort of logic of refutation, which gave it the name of the *eristic* or *dialectical school*

Megaric (me-gar'ik), a and n. [< L. *Megaricus*, < Gr Μεγαρικός, of Megara, < Μέγαρα, Megara.] I. a Same as *Megarian*

II. n A Megarian philosopher, or a follower of the Megarian school

megaron (meg-a-rion), n. pl. *megara* (-rā) [< Gr μέγας (mégas), a large room, a large building, a palace, < μέγας, great, large, spacious.] In the archaic, specifically, the great central hall of the Homeric house or palace. In large houses of this early time there was a megaron for the men and for the entertainment of guests, and another, more secluded, for the women of the household. The plan and disposition of such megarons, with the ceremonial family hearth in the middle, have been most clearly made out by the excavations of Schliemann and Dörpfeld at Mycenae in the Peloponnese in 1884—5

Megarrhiza (me-g-a-rī'zā), n. [NL., < Gr μέγας (mégas), great, + ῥίζα, root.] A former genus of plants now included under *Echinocystis*. The species so separated differ from the others in their large turgid seeds 15 to 30 millimeters long, and in the more pronounced development of their roots. See *Echinocystis* better root *chilli conje* (under *chilli*), and *man-root*

megasciere (meg'-a-ski-er), *n*. [*<* NL. *megasciurus*, *<* Gr *μῆγας*, great, large, + *σκιῶς*, hard.] A supporting spicule of a sponge, forming a part of the skeleton. Megascieres are generally of large size as indicated by the name, and usually contribute to the formation of a more or less consistent skeleton, while the microscieres or flesh spicules serve only for the support of single cells but the distinction is not possible in all cases.

megascierous (meg'-a-ski-er-us), *a*. [*<* *megasciurus* + *-ous*] Of or pertaining to a megasciere, having the character of a megasciere.

Megascialex (meg-a-ski-er-lex), *n*. [NL (Templeton, 1845), *<* (Gr *μῆγας*, great, large, + *σκῆλη*, a worm)] A genus of oligochaetous annelids or worms of large size. The Ceylonese *M. caerulea* is a yard long, and as thick as one's finger.

megascopic (meg'-a-ski-er), *n*. [*<* Gr *μῆγας*, great, + *σκοπεῖν*, view] 1 A modification of the solar microscope for the examination of bodies of considerable dimensions.—2 In *photog*, an enlarging camera.

megascopic (meg-a-ski-er-ik), *a*. [As *megascopic* + *-ic*] Perceptible through unaided vision; visible without the use of a powerful magnifying instrument, or with only the assistance of a pocket-lens used in contrast to *microscopic*, with reference to objects or investigations in regard to which the use of a microscope is not required as, the *megascopic* constituents of a rock; the *megascopic* structure of the brain; a *megascopic* examination of an object. Also *macroscopic*, *macroscopical*.

megascopical (meg-a-ski-er-ik-al), *a*. [*<* *megascopic* + *-al*] Same as *megascopic*.

megascopically (meg-a-ski-er-ik-al-i), *adv*. By the naked eye, by superficial inspection as distinguished from minute or microscopic inspection; without the use of magnifiers. Also *macroscopically*.

Megascops (meg'-a-ski-er), *n*. [NL, *<* Gr *μῆγας*, great, + *σκιῶς*, a small kind of owl] A genus of horned owls of the family *Strigidae*, established by J J Kaup in 1848. The name is now adopted for the group of American species of which the common red or mottled owl of North America, usually called *Scops asio*, is the type.

megaseme (meg'-a-si-em), *a* and *n*. [*<* Gr *μῆγας*, great, large, + *σημα*, sign] 1 *a*. In *craniom*, having a large index, specifically, having an orbital index over 89, not mesoseme.

If above 89, it [the orbital index] is *megaseme* Quain, *Anat.*, I 88.

2. *n*. A skull having a large index.

Megasoma (meg-a-si-er), *n*. [NL, *<* Gr *μῆγας*, great, large, + *σῶμα*, body] 1 A genus of large cetonian coleoptera, typical of the subfamily *Megasominae*, having the prosternal process glabrous, Hercules-beetles or elephant-beetles. *M. elaphus*, *M. typhon*, *M. actaeon*, and *M. theridion* are American species of these huge beetles. All these are North American except *M. theridion*, which is Californian. They are the largest coleoptera known. The genus was established by Kirby in 1825.

2 A genus of lepidopterous insects. *Boursula*, 1836.

Megasominae (meg'-a-si-er-mi-nē), *n*. pl [NL, *<* *Megasoma* + *-ina*] Swainson's name of the Hercules-beetles as a subfamily of *Cetoniidae*.

megaspore (meg'-a-si-er), *n*. [*<* Gr *μῆγας*, great, + *σπόρος*, a spore or seed, + *ἀγγος*, a vessel] Same as *macrosporangium*.

megaspore (meg'-a-si-er), *n*. [*<* Gr *μῆγας*, great, large, + *σπόρος*, seed] Same as *macrospore*.

Some of the best seams of coal appear to have been chiefly formed by the accumulation of these *Megaspores*. W B Carpenter, *Micros*, § 347.

megass, megasse (me-gas'), *n*. Same as *bagasse*.

Megasthena (me-gas'-the-nē), *n*. pl [NL, *<* Gr *μῆγας*, great, large, + *σθένος*, strength] In Dana's classification of mammals, the second order of *Mammalia*. Dana divided this class into four orders: *Archonta*, man alone, *Megasthena*, the quadrumanous, carnivorous, herbivorous, and cetacean mammals, *Microsthenia*, the chiroptera, insectivores, rodents, and edentates, *Othoidea*, the marsupials and monotremes. The arrangement is the same as Owen's *Archencéphala*, *Gyrocephala*, *Lycocéphala*, and *Lyncecephala*. *Megasthena* corresponds to *Gyrocephala*, also to *Edicabalia*, exclusive of man. Also *Megasthenia*.

megasthene (meg'-a-si-er-nē), *n*. One of the *Megasthena*, any quadrumanous, carnivorous, herbivorous, or cetacean mammal.

There is a close parallelism with the *Mutillidae*, the lowest of the *Megasthenes*. Amer Jour Sci., Jan., 1863, p. 71.

megasthenic (meg-a-si-er-nē-ik), *a*. [*<* *megasthene* + *-ic*] Having great strength of structural character; strongly organized; specifically, having the nature of or pertaining to the *Megasthena*.

This is in contrast with the fact among Crustaceans, the *megasthenic* and *microsthenic* divisions of which stand widely apart. J D Dana, *On Cephalopoda*, p. 8.

megasyntetic (meg'-a-sin-thet-ik), *a*. [*<* Gr *μῆγας*, great, + *σύνθεσις*, putting together. See *synthetic*] Same as *polyasyntetic*. [Rare.]

megathere (meg'-a-thēr), *n*. [*<* NL. *megatherium*] A mammal of the family *Megatheriidae*. **megatherian** (meg-a-thēr-i-an), *a*. and *n*. [*<* NL. *Megatherium* + *-an*] 1 *a*. Of or pertaining to the genus *Megatherium*.

2. *n*. A megathere.

Megatheriidae (meg-a-thēr-i-dē), *n*. pl Same as *Megatheriidae*.

Megatheriidae (meg-a-thēr-i-dē), *n*. pl [NL, *<* *Megatherium* + *-idae*] A family of extinct gigantic edentate animals of the order *Bruta*, related to the sloths and ant-eaters, the remains of which occur abundantly in Pleistocene deposits of North and South America, the ground-sloths. The teeth are usually 10 in the upper jaw and 8 in the lower, as in the sloths—in one genus 8 in the upper jaw and 6 in the lower. The typical and leading genera are *Megatherium* and *Colodon*, many others are sometimes referred to this family, sometimes to *Myodon*, etc.

megatherioid (meg-a-thēr-i-oid), *a* and *n*. [*<* *Megatherium* + *-oid*] 1 *a*. Resembling or having the characters of a megathere, belonging to the *Megatheriidae*.

2. *n*. A megathere or some similar mammal.

Megatherium (meg-a-thēr-i-um), *n*. [NL, *<* Gr *μῆγας*, great, large, + *θηρίον*, a wild beast] 1 The typical genus of the family *Megatheriidae*, containing huge extinct sloths larger than a rhinoceros.

They had 10 teeth in the upper jaw, and 8 in the lower, deeply implanted, persistently growing, prismatic, and with such an arrangement of the vasodentine dentine and cement that as they wore away the triturating surfaces continued to present a pair of transverse ridges. One of the best-known species is *M. americanum*, the skeleton of which measures 18 feet in length, including the tail, which is 5 feet.

2. [*<* c] An animal of this genus.

megatherm (meg'-a-thēr-m), *n*. [*<* Gr *μῆγας*, great, + *θερμ*, heat] In *bot.*, a term proposed by Alphonse de Candolle in 1874 to designate a plant of his first "physiological group," requiring great heat combined with much moisture. The plants of this group (*megatherms*) occur either within the tropics or not beyond the thirtieth degree of latitude, in warm moist valleys where the mean temperature does not fall below 30° C. See *Arctothemum*.

megatype (meg'-a-tīp), *n*. [*<* Gr *μῆγας*, great, large, + *τύπος*, impression.] In *photog*, an enlarged positive.

megaulic (me-gā'-lik), *a*. [*<* NL. *megaulicus*, *<* Gr *μῆγας*, great, + NL *aula*, aula, see *aula*, 2] Having the aula large; specifically, of or pertaining to the *Megaulon*.

Megaulica (me-gā'-li-kā), *n*. pl [NL, neut pl of *megaulicus*, see *megaulic*] Animals whose aula is large and whose cerebral hemispheres are extended horizontally or undifferentiated. They are the *Ichthyopoda* exclusive of amphibians, dipnoans, and *Branchiostoma*. *Wälder*, *Amer Nat.*, Oct., 1887, p. 914.

megavolt (meg'-a-vōlt), *n*. [*<* Gr *μῆγας*, great (see *meg-*), + *E volt*.] A unit equal to one million volts.

megaweber (meg'-a-vā-bēr), *n*. [*<* Gr *μῆγας*, great (see *meg-*), + *E. weber*.] A unit equal to a million webers.

megazoispor (meg-a-zō-ō-spōr), *n*. [*<* Gr *μῆγας*, great, + *ζῶον*, animal, + *σπόρος*, seed] Same as *macrozoispor*.

megerg (meg'-ērg), *n*. Same as *megarg*.

Megilla (mē-jil'-ā), *n*. [NL] 1 A genus of ladybirds, of the family *Coccinellidae*, founded by Mulsant in 1851. The larva of *M. maculata*, the spotted ladybird, is useful in devouring plant lice, chinch-bugs and eggs of the Colorado potato beetle, the adult beetle feeds upon pollen. See *cut out ladybird*.

2 A genus of hymenopterous insects. *Fabricius*, 1804.

megilp (mē-jil'-p), *n*. and *v*. See *magilp*.

Megistanes (mē-jis-tā-nēs), *n*. pl [NL, *<* Gr *μῆγας*, great, great, grande, *<* *μῆγας*, superl. of *μῆγας*, great, large.] A superfamily group, by Newton made an order, of extant ratite birds, containing the two families *Casuaridae* and *Dromadidae*, or the cassowaries and emus. Called *Casuari* by some authors.

Skeleton of *Megatherium*

megohm (meg'-ōm), *n*. [*<* Gr. *μῆγας*, great (see *meg-*), + *ohm*.] A unit equal to one million ohms.

megrim (mē'-grīm), *n*. [Early mod. E. also *meagrim*, *meagrom*, *<* ME. *migrim*, *migreyme*, *migreue*, *mygreyn*, a corruption of *migraine*, *mygraine*, *<* OF. *migraine*, *f* *migraine* (*>* G. See *hemioranum*.] 1. A form of headache usually confined to or beginning or predominating on one side of the head. It may be ushered in by malaise, languor, chilliness, or ocular or other sensory symptoms. The ocular symptoms are such as amblyopia, a glimmering appearance before the eyes, spectra of angular outline (fortification spectra), or hemianopsia. The headache, often being coming overpowering in its character and intensity, lasts from several hours to two or three days. At its height it is attended often with nausea and vomiting. The attacks return with a certain periodicity. Exhausting influences are apt to increase their frequency. The liability to megrim lasts for years, and is apt to disappear in middle life or later. Also called *migraine*, *hemioranum*, *nervous headache*, and *stuck headache*.

A fervent *mygreyn* was in the ryst syde of hurr hedde. *Chron. Vilodun*, p. 12 (*Hallwell*).

2 *pl* Lowness of spirits, as from headache or general physical disturbance; the "blues"; a morbid or whimsical state of feeling.

These are his *megrim*, fits, and melancholies. *Ford*.

3 *pl* In *farriery*, a sudden attack of sickness in a horse at work, when he reels, and either stands still for a minute dull and stupid, or falls to the ground insensible. These attacks are often periodical, but are most frequent in warm weather.

Meibomian (mī-bō'-mī-an), *a*. [*<* *Meibomius* (see *def*) + *-an*.] In *anat.*, pertaining to Meibomius (Heinrich Meibom, a German physician, 1638-1700) specifically applied to the sebaceous follicles of the eyelids, known as *Meibomian glands* or *follicles*. They secrete the unctuous substance which lubricates the eye. See *gland*.

meidán, *n*. Same as *maudan*.

Meidinger cell (mī'-ding-er-sel) A voltaic element in which the plates are zinc and copper and the liquids solutions of magnesium sulphate and copper sulphate. The copper plate and solution of copper sulphate are contained in a small jar which stands in the bottom of the cell, the supply of copper sulphate is kept up by means of a funnel or tube containing crystals of it and extending from the top of the cell down into the inner jar.

meikle, *a* and *n*. See *mickle*.

meiniet, *n*. See *meiny*.

meint, *n*. Past participle of *meiny*.

meisterkinger, *meistersinger* (mī-s'-ter-seng'-er, -sing'-er), *n*. [G., *<* *meister*, master, + *singer* (= AS. *sangere*), singer (*<* *sang*, song), or *singer*.

meisterringer *n.* **meisterringer**; specifically, a member of one of the societies or guilds formed during a period ranging from the fourteenth to the sixteenth century in the principal cities of Germany (the most celebrated at Nuremberg) for the cultivation of poetry and music. These societies were composed mostly of workmen, and succeeded to the field occupied before their time by the Minnesinger, who had usually belonged to the aristocratic classes. They founded schools in which their art, called *Meistergesang*, was taught according to strict rules constituting a system called *tabulatur*. They practised chiefly lyrical poetry, generally on a biblical subject, sung with an accompaniment of some stringed instrument, as the harp, violin, etc. Before admission to the degree of *Meister* (master) it was necessary, as a rule, to pass through four preparatory degrees viz., *Schüler* (scholar), *Schulfreund* (schoolfellow), *Dichter* (poet), and *Singer* (singer). The candidate for admission to the guild had to present a poem and its musical accompaniment, which must receive the approval of four judges, called *Meister*, who examined the diction, grammatical construction, meter, rhyme, and melody. The *Meisteringer* claimed to trace their origin back to the middle of the tenth century, but their earliest school is alleged to have been founded at Mainz about 1312 by Frauenlob, one of the last of the Minnesingers, and schools were established afterward in all the principal cities of Germany. After the Reformation the guilds gradually became extinct, but the school at Ulm continued in existence until 1839.

melanian (me-lā'ni-an), *a* and *n* [*< Melania + -an*] I. *a* Pertaining to the *Melanidae*, or having their characters

II. *n* A member of the family *Melanidae*

melanic (me-lan'ik), *a* [*< Gr μέλας (melas-), black, + -ic*] 1 Black, dark, as, a *melanic* race. — 2. Of or pertaining to melanosis — **Melanotic cancer**, melanocarcinoma or melanocarcinoma — **Melanotic deposit**, a deposit of dark pigment in the tissues.

Melanotic variety of race, in zool., a variety or race characterized by a darker color, or a greater extension of the dark markings than in others of the species. Such varieties have frequently been described as distinct species

Melanitidae (mel-a-ni'ti-dē), *n* *pl*. [NL, *< Melania + -idae*.] A family of gastropods of the order *Prosobranchiata*, typified by the genus *Melania*. The shell is spiral, turreted and covered with dark epidermis the aperture is often channelled or notched in front the outer lip is acute and the operculum is horny and spiral. The very numerous species, referable to many genera, are mostly fluviatile and ovoviviparous. They are found in nearly all the warmer parts of the world. The family is divided, both on structural characters and on geographical distribution into two subfamilies, *Melaninae* and *Streptomantinae*. Also *Melanicea*, *Melanitidae*, *Melanidae*.

melaniform (me-lā-ni-tōrm), *a* [*< NL. Melania + L. forma, form*] Having the form of the melaniace; resembling a melanian

Melaninae (me-lā-ni-ti-nē), *n* *pl* [NL, *< Melania + -inae*.] One of two subfamilies of *Melanidae*, typified by the genus *Melania*, containing chiefly Asiatic and Polynesian species, only a few of which are found in America. distinguished from *Streptomantinae*. The aperture is usually rounded in front and not produced, though often notched, the mantle-margin is fringed. The species are ovoviviparous.

melanin (me-lā'ni-in), *a* and *n* I. *a*. Melanian in a strict sense, of or pertaining to the *Melaninae*.

II. *n* A member of the *Melaninae*

melaniline (me-lan'-i-lin), *n.* [*<* Gr μέλας (μελαν-), black, + *E. aniline*.] A basic substance ($C_{12}H_{10}N_2$) obtained from cyanogen chlorid and dry aniline.

melanin (mel'-a-nin), *n.* [*<* Gr μέλας (μελαν-), black, + *-in*.] The black pigment of the hair, choroid, retina, and epidermis of colored races, also, the dark pigment seen in melanæmia and in melanosarcoma and melanocarcinoma. The pigments in these cases may, however, be different.

We must be on our guard, however, not to confound the ordinary black pigment found in the human lungs with melanin. *Frey, Histol. and Histochem. (trans.)*, p. 58.

melanoid (me-lā'-noid), *a* and *n.* [*<* *Melania* + *-oid*.] Same as *melanian*.

Melanippe (mel'-a-nip'-ē), *n.* [NL (Duponchel, 1829), *<* Gr Μελανίππη, *f.* Μελανίππος, *m.* a mythical proper name, *<* μέλας (μελαν-), black, + *ἵππος*, horse.] A genus of geometrid moths of the subfamily *Larentinae*, of wide distribution, with over 40 species.

melanism (mel'-a-nizm), *n.* [*<* Gr μέλας (μελαν-), black, + *-ism*.] In *physiol.*, an undue development of coloring material in the skin and its appendages, the opposite of *albinism*, specifically, in *zool.*, the abnormal development of black or dark pigment in the pelage of a mammal or the plumage of a bird. It is not pathological like melanosis, interfering in no way with the health and vigor of the animal. It is very frequent in some groups, as squirrels and hawks, and sometimes becomes an inherited specific character, as in the case of the black rat, *Rattus rattus*, believed to be a permanent melanism of the white-bellied rat or roof-rat, *M. alexandrinus* or *M. tectorum*. Compare *albinism*, *leucism*, *erythrism*.

melanistic (mel'-a-nis'-tik), *a.* [*<* Gr μέλας (μελαν-), black, + *-istic*.] Affected with melanism; abnormally dark in color. Also *melanotic*.

The *Nasua vittata* was based on a *melanistic* specimen of *N. rufa*, collected by the traveler Schomburgk.

J. A. Allen

melanite (mel'-a-nit), *n.* [*<* Gr μέλας (μελαν-), black, + *-ite*.] 1 A variety of garnet of a deep-black color. It properly belongs to the lime iron division of the species, but some other kinds are also included. It is often associated with volcanic rocks as at Vesuvius. Some varieties are remarkable as containing a small percentage of titanium, and seem to be intermediate between garnet and schorlomite. See *garnet*. 2 In *conch.*, a fossil melanian.

melanitic (mel'-a-nit'-ik), *a.* [*<* *melanite* + *-ic*.] Pertaining to, resembling, or containing melanite.

melanocarcinoma (mel'-a-nō-kār-si-nō'mā), *n.* [*<* Gr μέλας (μελαν-), black, + *καρκίνωμα*, cancer, see *carcinoma*.] In *pathol.*, a pigmented carcinoma, from gray to brown and black in color. The pigment lies partly in the epithelial tracts, and partly in the stroma. It is less frequent than melanotic sarcoma.

Melanocetinae (mel'-a-nō-se-ti-nē), *n. pl.* [NL, *<* *Melanocetus* + *-inae*.] A subfamily of *Cetartida*, represented by the genus *Melanocetus*.

melanocetine (mel'-a-nō-sē'tin), *a* and *n.* I. *a.* Having the characters of or pertaining to the *Melanocetinae*.

II. *n.* A pediculate fish of the subfamily *Melanocetinae*.

Melanocetus (mel'-a-nō-sē'tus), *n.* [NL, *<* Gr μέλας (μελαν-), black, + *κῆτος*, a whale, see *Cetacea*.] A genus of deep-sea pediculate fishes,

a variety or class of mankind according to Huxley's classification. They are pale-complexioned people, with dark hair and eyes, and generally long but sometimes broad skulls, as the Iberians and black Celts of western Europe, and the dark complexioned white people of the shores of the Mediterranean, western Asia, and Persia.

I am disposed to think that the *Melanochroi* are not a distinct group but result from the mixture of Australoids and Xanthochroi. *Huxley, Anat. Vert.*, p. 421.

Hamilt. and Semitt. *Melanochroi*
W. H. Flower, *Pop. Sci. Mo.*, XXVIII, 117.

melanochroic (mel'-a-nō-krō'ik), *a.* [*<* *melanochroous* + *-ic*.] Dark-colored, of or pertaining to the *Melanochroi*, as, the *melanochroic* races.

The *melanochroic* or dark stock of Europe
Huxley, Critiques and Addresses, p. 160.

melanochroite (mel'-a-nō-krō'it), *n.* [*<* Gr μέλας (μελαν-), black, + *χρῶμα*, *χρῶμα*, color, + *-ite*.] A basic chromate of lead found at Bevoysk in the Ural. Also called *pharmachroite*, since the color is red rather than black.

melanochroous (mel'-a-nō-krō'us), *a.* [*<* NL *melanochroous*, (*<* Gr μελανόχρους (also μελαχρῶς), black-skinned, *<* μέλας (μελαν-), black, + *χρῶμα*, *χρῶμα*, skin, color.] Dark-colored; having an unusually dark skin, as a person of white race. Also, improperly, *melanochrous*.

There seems good ground for the belief that, among Europeans, the *melanochrous* people are less obnoxious to its [yellow fever's] ravages than the *xanthochrous*. *Huxley, Critiques and Addresses*, p. 167.

melanocomus (mel'-a-nō-kō'mus), *a.* [*<* Gr μελακόμης, black-haired, *<* μέλας (μελαν-), black, + *κομή*, hair, see *coma*.] Black-haired, having black hair.

Melanocorypha (mel'-a-nō-kōr'-i-fā), *n.* [NL (Boie, 1828), *<* Gr μέλας (μελαν-), black, + *κορυφή*, head, top, see *coryphaea*.] One of the leading genera of the lark family, *Alaudidae*, containing such as the common *M. calandria*, the calandria lark of Europe and Africa, and *M. sibirica*, the white-winged lark.

Melanodendron (mel'-a-nō-den'dron), *n.* [NL (A. P. de Candolle, 1836), *<* Gr μέλας (μελαν-), black, + *δένδρον*, a tree.] A genus of plants of the natural order *Compositae*, tribe *Asterotraceae*, and subtribe *Heterochromaeae*. They have copious bristly pappus, numerous narrow bracts of the involucre, which are arranged in an indefinite number of series, and as heads which are 3 or 5 ribbed and scarcely compressed. There is but a single species, *M. integrifolium*. See *black cabbage-tree*, under *cabbage-tree*.

melanoid (mel'-a-noid), *a.* [*<* Gr μελανοειδής, black-looking, *<* μέλας (μελαν-), black, + *εἶδος*, form.] Having a black or dark appearance — *Melanoid cancer*, in *pathol.*, melanocarcinoma.

melanoma (mel'-a-nō'mā), *n.* [NL, *<* Gr μελανωμα, blackness, *<* μέλανω, blacken, *<* μέλας (μελαν-), black.] A dark-pigmented tumor.

melanopathia (mel'-a-nō-path'-i-ā), *n.* [NL, see *melanopathy*.] An excess of the dark pigment of the skin, due to abnormal function of the rete mucosum. See *melasma*.

melanopathy (mel'-a-nōp'-i-ā), *n.* [*<* Gr μέλας (μελαν-), black, + *πάθος*, *<* πάθος, suffering.] Same as *melanopathia*.

Melanophila (mel'-a-nōf'-i-lā), *n.* [NL, *<* Gr μέλας (μελαν-), black, + *φιλος* (φίλος-), loving.] A genus of buprestid beetles founded by Eschscholtz. About 40 species are known, and the genus is proper to the cold and temperate regions of both hemispheres, but a few have been found in Brazil and the East Indies. Eleven occur in North America. *M. fulvopunctata* is a small brassy black species with three pairs of yellow spots, inhabiting pines in the northern United States.

melanophlogite (mel'-a-nōf'-lo-jit), *n.* [*<* Gr μέλας (μελαν-), black, + *φλογ* (φλογ-), a flame (see *phlog*), + *-ite*.] A mineral occurring in colorless cubic crystals, which turn black when heated (hence the name). It consists of almost pure silica, and is probably a pseudomorph. It is found associated with the crystals of sulphur of Girgenti, Sicily.

Melanophyceae (mel'-a-nōf'-sē-ē), *n. pl.* [NL (Rabenhorst, 1868), *<* Gr μέλας (μελαν-), black, + *φύκος*, a seaweed, + *-ae*.] One of the five great divisions of *Algae* according to the classification of Rabenhorst. It included the *Phaeosporae* and *Fucaeae*, and is the same, or nearly the same, as *Melanospermaceae*.

Melanopsidae (mel'-a-nōp'-si-dē), *n. pl.* [*<* *Melanopsis* + *-idae*.] An Old World family of gastropods, typified by the genus *Melanopsis*, related to and detached from *Melampus*. The spire is short and pointed, the body wholly lengthened, and the pillar lip thickened.

Melanopsis (mel'-a-nōp'-sīs), *n.* [NL, *<* *Melania* (a) + Gr *opsis*, appearance.] 1 The typical genus of *Melanopsidae*. *M. costata* is a Syrian species, said to be found in the Dead Sea —

2 [*<* *c.*, *pl.* *melanopides* (-si-dēz).] A member of this genus.

Melanorrhoea (mel'-a-nō-rō-ē), *n.* [NL (Wallich, 1830), *<* Gr μέλας (μελαν-), black, + *ῥοία*, a flowing, *<* ῥέω, flow.] A genus of dicotyledonous polypetalous plants of the natural order *Anacardiaceae* and the tribe *Mangiferae*; characterized by simple leaves, by the petals growing after the flower expands, and by the numerous stamens. They are large trees over a hundred feet in height, and have broad spreading heads bearing large entire coriaceous leaves and axillary panicles of perfect flowers. The fruit is a drupe and is surrounded by the five or six enlarged petals, which are spread out in a star like manner. There are 6 species, natives of eastern India and Borneo. *M. vitata* is the important black, Martaban or Burmese varnish tree.

melanosarcoma (mel'-a-nō-sār'-kō'mā), *n.* [*<* Gr μελανοσάρcoma (mel'-a-nō-sār'-kō'mā), black, + *σάρcoma*, sarcoma.] In *pathol.*, a form of sarcoma characterized by the presence of dark pigment. It most frequently occurs in the skin and choroid coat of the eye, is usually formed of spindle shaped cells, and is very malignant.

melanoscope (mel'-a-nō-skōp), *n.* [*<* Gr μέλας (μελαν-), black, + *σκοπεῖν*, view.] An instrument devised by Lommel to distinguish between the flames of substances which in the spectroscopic exhibit red bands. It consists of a pair of spectacles made of glass of light violet color over dark red glass, a combination which admits only red rays, so that most greens, for example, would appear black.

melanose (mel'-a-nōs), *n.* [NL, *<* Gr μελάσσειν, a becoming black, see *melanosis*.] A fungous disease of grape-vines, caused by *Septoria ampelina*. The leaves are the parts attacked and are at first covered with brownish spots, these soon spread over and discolor the entire surface of the leaf, which then drops off. The fungus is probably a native of Europe, but also occurs in New York along the lakes, in Kansas, and in Missouri. See *Septoria*.

melanosiderite (mel'-a-nō-sid'-ē-rīt), *n.* [*<* Gr μέλας (μελαν-), black, + *σιδερίτης*, of iron, see *siderite*.] A mineral occurring in black masses with a vitreous or resinous luster. It consists of hydrated iron sesquioxide with 7 per cent. of silica. It is found at Mineral Hill, Delaware county, Pennsylvania.

melanosis (mel'-a-nō'sis), *n.* [NL, *<* Gr μελάσσειν, a becoming black, *<* μέλας (μελαν-), blacken, see *melanoma*.] In *pathol.* (a) An abnormal deposition of pigmentary matter in various organs or parts of the body, as the spleen, liver, or bone-marrow, associated with melanæmia, malarial poisoning, etc. (b) The condition of the system associated with the presence of pigmented tumors. Specifically this is an organic affection (due to the softening of the tissue of the part from a pigmentary deposit, especially tubercles) in which tissue is converted into a black hard, homogeneous substance, near which ulcers or cavities may form.

melanosity (mel'-a-nōs'-i-ti), *n.* [*<* *melanosis* (-ose) + *-ity*.] Tendency toward blackness, darkness of color, as of the hair or eyes. *Beddoe, Science*, VII, 84.

melanosperm (mel'-a-nō-spērm), *n.* An alga belonging to the division *Melanospermata*.

Melanospermaceae (mel'-a-nō-spē'r-mā-ē), *n. pl.* [NL (Harvey, 1849), *<* Gr μέλας (μελαν-), black, + *σπέρμα*, seed, + *-ae*.] The olive-brown seaweeds, one of the three principal divisions into which the *Algae* were divided by Harvey. It included the *Fucaeae*, *Laminariaceae*, etc., but is now nearly obsolete.

melanospermous (mel'-a-nō-spē'r-mus), *a.* [*<* Gr μέλας (μελαν-), black, + *σπέρμα*, seed, + *-ous*.] Characterized by dark-colored seeds or spores, belonging to the *Melanospermata*.

The group of *melanospermous* or olive green sea weeds
W. B. Carpenter, *Micros.*, § 327.

melanotekite (mel'-a-nō-tē'kit), *n.* [*<* Gr μέλας (μελαν-), black, + *τεκίτης*, melt, + *-ite*.] A rare silicate of lead and iron from Långban, Sweden. It occurs in black or bluish gray crystalline masses with cleavage in two directions. It fuses easily to a black glass, whence the name.

melanothallite (mel'-a-nō-thal'-it), *n.* [*<* Gr μέλας (μελαν-), black, + *θαλλός*, a branch, + *-ite*.] In *mineral.*, a mineral occurring in black lamellæ, which upon exposure gradually change to a green color, and containing copper chlorid, copper oxid, and water. It was found as a sublimation-product at Vesuvius.

melanotic (mel'-a-nō'tik), *a.* [*<* *melanosis* (-ot-) + *-ic*.] 1 Properly, affected with melanosis, melanic, melanoid. 2 In *zool.*, same as *melanistic*. *Melanotic cancer*, melanocarcinoma or melanosarcoma.

Melanotus (mel'-a-nō'tus), *n.* [NL, *<* Gr μέλας (μελαν-), black, + *νῦκτος*, the black.] A genus of click beetles of the family *Elateridae*, founded by Eschscholtz in 1829. It is one of the largest and most important genera of *Elateridae* and is distributed all over the world. There are upward of 100 species, 44 of

Melanocetus johnsoni (the belly distended with another fish), about half natural size.

typical of the subfamily *Melanocetinae*, black in color, and with a mouth suggesting that of a whale. *M. johnsoni* is the only species. *Günther, 1864.*

Melanochroi (mel'-a-nō-krō'i), *n. pl.* [NL, *pl.* of *melanochroous*, black-skinned. see *melanochroous*.] In *anthropology*, the dark-white peoples,

which are North American. These beetles give rise to some of the most destructive wire worms. *M. communis* is a common brown pilose species of the United States, half an inch long.

melanotype (mel'-a-nō-tip), *n* [*< Gr. μέλας (melan-), black, + τύπος, type*] In *photog.*, a ferrotype. [Rare or obsolete.]

melanous (mel'-a-nus), *a* [*< Gr. μέλας (melan-), black, + ούς*] Dark-complexioned, brunette, the opposite of blond or xanthous. Pritchard.

The melanous, with black hair and dark brown or blackish skins. Huxley, (Ritiques and Addresses, p. 158)

Melanoxylon (mel-a-nok'-si-lon), *n*. [NL (Schott, 1827), *< Gr. μέλας (melan-), black, + ξύλον, wood*] A genus of leguminous plants of the suborder *Casalpiniæ* and the tribe *Sclerolobiæ*, characterized by a compressed partially woody legume with samara-like seeds, the outer integument expanding into a wing at the apex. There is but one species, *M. Brauma*. See *Brauma*.

melanterite (me-lan'te-rit), *n*. [*< Gr. μέλαντερος, compar. of μέλας (melan-), black, + -ίτης*] The native hydrous sulphate of iron.

Melanthium (me-lan'thi-um), *n* [NL (Linnaeus, 1753), so called in allusion to the darker color which the persistent perianth assumes after blossoming, *< Gr. μέλας, black, + άνθος, a flower*] A genus of liliaceous plants of the tribe *Veratrea*. They have flat broadly winged seeds, and the segments of the perianth have a distinct claw. They are herbs having an erect leafy stem springing from a short rootstock, and an open pyramidal panicle of polyanthus flowers, which are yellowish white or greenish. There are 3 species, all natives of North America, and sometimes cultivated for ornament. *M. Virginicum* of the United States is called *black flower* (which see).

melanuria (mel-a-nū'ri-ā), *n* [NL see *melanurin*] The presence of a dark pigment in the urine.

melanuric (mel-a-nū'rik), *a*. [As *melanurin* + -ic.] Pertaining to or characterized by the presence of very dark pigment in the urine — **Melanuric fever**. See *fever*.

melanurin (mel-a-nū'rin), *n* [*< Gr. μέλας (melan-), black, + ούρον, urine*] A dark pigment found in the urine.

melaphyre (mel-a-fir), *n* [*< Gr. μέλας, black, + (σπ)φύρον (typh), porphyry* see *porphyry*] A fine-grained greenish- or brownish-black aggregate of plagioclase, augite, olivin, magnetite, or titaniferous iron and some chloritic mineral, usually dolomite. The term *melaphyre*, as it has been formerly used by lithologists, includes a considerable variety of rocks, but, as now generally restricted, it is properly applied to such basalts as have undergone considerable alteration. Hence the melaphyres are, in point of fact, mostly of Paleozoic age, although some are Mesozoic, because the older a rock is, other things being equal, the more likely it is to have undergone chemical change.

mela-rosa, mella-rosa (mel'-a-rō-zā), *n*. [*< It. mela, an apple, + rosa, a rose*] The fruit of a tree of the genus *Citrus*, probably a variety of the lime, cultivated in Italy.

melasma (me-las'mā), *n* [NL, *< Gr. μέλασμα, a black color, < μέλαινα, blacken, < μέλας, black* see *melas*.] 1. An abnormal access of color of the skin, local or general, usually dependent upon constitutional disorder, local pigmentary stains of the skin. The morbid process is called *melanopathia*. Addison's disease is known as *suprarenal melasma* — 2 [cap.] In *zoöl* (a) A genus of melanian mollusks. Adams, 1858. (b) A genus of tenebrionine beetles, based on *M. lineatum* of the Canaries. Wollaston, 1864.

melasmic (me-las'mik), *a* and *n* [*< melasma + -ic*] 1. *a* Pertaining to melasma: as, *melasmic blotches*.

II. *n* Same as *melasma*, 1.

melassest, *n*. An obsolete form of *molasses*.

melassic (me-las'ik), *a* [*< F. melasse, molasses, + -ic*] Pertaining to or obtained from molasses as, *melassic acid*.

Melastoma (me-las'tō-mā), *n*. [NL (Burmann, 1737), so called because the fruit of some species, when eaten, stains the lips black; *< Gr. μέλας (melan-), black, + στόμα, mouth*.] An Old World genus of plants, type of the natural order *Melastomaceæ*, belonging to the tribe *Osbeckieæ*. They have from 10 to 14 unequal anthers, the connectives of the longer ones being produced anteriorly into two tubercles or spurs. They are hairy shrubs, almost always erect, with coriaceous entire leaves which are from 8- to 7-nerved, and showy purple or rose-colored flowers growing at the tips of the branches, either solitary or in clusters. About 44 species are known, natives of tropical and western Asia, Oceania, and the Seychelles. *M. Malabaricum*, a shrub common in India, is there known as *Indian rhododendron*. It is also called *Malabar laurel* or *gooseberry*.

Melastomaceæ (me-las-tō-mā'sē-ē), *n* pl [NL (Brown, 1818), *< Melastoma + -aceæ*.] A natu-

ral order of dicotyledonous polypetalous plants of the cohort *Myrtales*. The ovules are attached to the interior angle of the cells, or to basal placentas, the anther usually opens at the top by two pores, the connective is thickened or variously appendaged, and the leaves have from 3 to 9 nerves. The order embraces 128 genera and about 2,600 species, which are almost entirely confined to the tropics, and are most abundant in South America.

melastomaceous (me-las-tō-mā'shius), *a*. Belonging or relating to the natural order *Melastomaceæ*.

Melastomes (mel-a-stō-mē-ē), *n* pl. [NL (Bentham and Hooker, 1867), *< Melastoma + -es*] A suborder of dicotyledonous polypetalous plants of the order *Melastomaceæ*. The cells have rather prominent placentas inserted in their internal angles, and many ovules, the embryo is very small, and slightly rounded or subglobose. The suborder embraces 9 tribes and 128 genera, of which *Melastoma* is the type. They are trees, or rarely herbs, and are found in both the Old and New Worlds.

Melchite (mel'kit), *n* and *a*. [*< MGr. Μελχίτης, < Syriac malkāyē, Ar. malekiya, mulkiya, lit. royal, < melch, king*] 1. *n* An orthodox Eastern Christian as distinguished from a Monophysite or Nestorian. The name was originally given to the Orthodox as belonging to the Imperial church, the title of *king* being that which was commonly given in Greek and in Oriental languages to the Roman and to the Byzantine emperor. Although the term *Melchite* is older than the Council of Chalcedon (A. D. 451), its wider use dates from its adoption after that council by the Monophysites who rejected the decrees of the council, and employed this name to represent the Orthodox as receiving them merely in submission to the edict of the emperor Marcian. The name *Melchite* is sometimes given also to members of communities of Christians in Syria and Egypt, formerly in communion with the Orthodox Greek Church, who have submitted to the Roman see.

Those Syrian Christians who, though not Greeks, followed the doctrines of the Greek Church as declared at the Council of Chalcedon, were called by their opponents, by way of reproach, *Melchites*, 'royalists' or 'imperialists,' because they submitted to the edict of Marcian in favour of the decrees of the Council of Chalcedon. Isaac Taylor, The Alphabet, I. 291.

II. *a* Of or pertaining to the Melchites as, the uncial *Melchite* alphabet. Isaac Taylor.

melder (mel'dēr), *n* [*< Icel. melder, flour or corn in the mill, < mala, grind* see *meal*.] The quantity of meal sent to a mill to be ground at one time [Scotch].

That lika melder wi' the miller

Thou sat as lang as thou had stiller

Burns, Tam o' Shanter

meldometer (mel-dom'e-tēr), *n* [Irreg. *< Gr. μέλδω, melt, + μέτρον, measure*] An apparatus devised by Joly for determining the melting-points of minerals. It involves the use of a platinum strip heated to the required degree by the passage of an electrical current, whose temperature is calculated by the ordinary methods.

meal¹, *n* A Middle English form of *meal*.

meal², *n* A Middle English form of *meal*.

meal³, *n* [*< AS. mæl (= Icel. mál = Dan. mæle), speech, talk, conversation*] Discourse, conversation.

O moul thou marres a myrry mele

Alliterative Poems (ed. Morris), I. 23

meal⁴, *v* [ME. *melen*, *< AS. mælan* (= Icel. *mala* = Dan. *mæle*), speak, *< mæl*, speech, talk see *meal³*, *n*] I. *intrans.* 1. To speak, talk.

And when that Wit was I war how his wyf tolde,

He bi com so confoundet he couthe not mele,

And as doumbe as a dore droug him ayde

Piers Plowman (A), xi. 98.

2. To chatter, twitter, as birds.

Bothe the thrush & the thrustele bi xxiii of bothe,

Meloden ful merye in maner of here kinde.

William of Palerne (E. E. T. S.), I. 1281.

II. *trans.* To call or bring together; assemble.

Themperour with moche merthe his men than meled

William of Palerne (E. E. T. S.), I. 1287

meal⁵, *n* [ME., origin obscure] A cup or bowl.

Also they had tool to dyke and delve with, as pikforkis,

spadus, and schovells, stakes and rakes, bokettis, meles,

and payles. Vegetius, MS. Douce 291, f. 47 (Halliwell).

Meleagridæ, Meleagridæ (mel-ē-ag'-rī-dē, mel'-ē-ag-rī-dē), *n* pl [NL, *< Meleagris (-id-) + -idæ*] A family of *Gallinæ* or gallinaceous birds, the turkeys. The name is sometimes restricted to the American turkeys, and sometimes includes the African guinea-fowls.

Meleagridinæ, Meleagridinæ (mel-ē-ag-rī-dī-nē, mel'-ē-ag-rī-nē), *n* pl. Turkeys as an American subfamily of *Phasianidæ*, typified by the genus *Meleagris*.

Meleagrina (mel'-ē-ag-rī-nā), *n* [NL, *< Meleagris*, 2, + -ina²] A genus of asiphonate bivalves of the family *Asioidæ* or *Pteridæ*, the wing-shells, having the wings reduced and no

cardinal teeth; the true pearl-oysters. The pearl-oyster is *M. margaritifera*, a species widely distributed in most parts of the world, in warm seas, it sometimes attains a length of 10 or 12 inches.

Meleagrins (mel-ē-ā-gris), *n*. [NL, *< L. meleagris, < Gr. μελαγρίς, a sort of guinea-fowl, named after Meleager, < Μελέαγρος, > L. Meleager, son of Eneus, and the hero of the hunt of the Calydonian boar.*] 1. In ornith. (a) [*l c*] A name of the common guinea-fowl, to which Linnaeus gave the technical specific name *Numida meleagris*. (b) An American genus of *Phasianidæ* or *Meleagridæ*, of large size with varied metallic plumage, naked tarsi spurred in the male, bare head with erectile fleshy caruncles, and a tuft of hair-like feathers on the breast; the turkeys. There are three kinds: *M. gallopavo* or *mexicana*, the supposed original of the domestic turkey, differing little from *M. sylvestris* or *amercana*, the common wild turkey of the United States, and the more beautiful and very distinct ocellated turkey of Honduras, *M. ocellata*. See *turkey*. 2. In conch., a genus of mollusks same as *Meleagrina*. Montfort, 1810.

mélée (mā-lā'), *n*. [F, *< OF. meslee, medlee, etc.*, a mixture, confusion, fight, *> E. medley and melody*, *q v*] A confused conflict, as a hand-to-hand fight among a number of persons, especially, in modern books, a tourney in which many combatants (not two only) take part.

"I shall tilt to-morrow" answered Athelstane, "in the melle, it is not worth while for me to arm myself to-day."

Scott, Ivanhoe, III.

=Syn. *Affray, Brawl*, etc. See *quarrel*, *n*.

melegueta pepper. Same as *grains of paradise* (which see, under *grain*).

Meles (mē-lēz), *n*. [NL, *< L. meles, also meles, melis, melus*, a badge or marten.] The typical genus of the subfamily *Melinæ*, family *Mustelidæ*. It formerly included all the *Melinæ*, but is now restricted to the European badger, *M. vulgaris* or *M. taxus*. See *Melinæ*, and cut under *badger*.

Meletian (me-lē'shan), *n*. [*< Gr. Μελετιανος, pl, < Μελέτιος, LL. Meletius* see *def*] 1. One of a sect of the fourth and fifth centuries, followers of Meletius, schismatic bishop of Lycopolis in Egypt. After his death they adopted Arian views — 2. A follower of Meletius, made bishop of Antioch about A. D. 360. He was supposed to be an Arian, but proceeded immediately to profess the Nicene faith, and the Arians appointed another bishop in his stead. Among the Orthodox some were adherents of Meletius, and therefore known as *Meletians*, others remained separate and were known (from the last canonically ordained bishop, Eustathius, then dead) as *Eustathians*. Further difficulty was occasioned by the two orthodox parties using the word *hypostases* (which see) in different senses. The schism between them continued till the end of the century.

mele-tidet, *n*. See *meal-tide*.

Melia (mē-li-ā), *n*. [NL (Linnaeus), so called from the resemblance of the leaves to those of the ash, *< Gr. μέλις, the ash*.] A genus of dicotyledonous polypetalous plants of the natural order *Melastomaceæ* and the tribe *Meliæ*, characterized by pinnate leaves, an elongated staminate tube, and from 10 to 12 anthers. They are trees, with alternate pinnate or bipinnate leaves, and large axil-

lary panicles of medium-sized flowers, which are white or purple, and are either 5- or 6-parted. There are 12 species, found in eastern India, Australia, and Oceania. *M. andersonii*, variously known as *pride-of-India*, *bead-tree*, *foals acorn*, etc., is native in sub-Himalayan India, Persia, and China, and widely cultivated for ornament in warm countries. It is from 50 to 60 feet high, and has bipinnate leaves, and large clusters of fragrant lilac-colored blossoms, whence it is sometimes called *Indian lilac*. Its wood, hard and finely marked, is sometimes called *bastard cedar*. A decoction of its bark is cathartic and emetic, and sometimes used also as a vermifuge. (See *andersonii*, *bead-tree*,

chilus-tree, and *holy tree*, under *holy*. Also called *hill-margosa*. The tree long known as *M. Asiatrica*, but now classed as *Simarouba indica*, is the margosa or sim-tree, common in India, often planted there and elsewhere. (See *myrica*.) *M. Asiatrica*, var. *Asiatica*, is an elegant tree of India, the Malay archipelago, and Australia, called in the last-named country *white cedar*. *M. semperverna*, now considered to be the same as *M. Asiatrica*, has been called *leop-tree* in the West Indies.

Meliaceae (mē-lī-ā'sē-ē), *n. pl.* [NL. (A. L. de Jussieu, 1817), < *Melia* + *-aceae*] A natural order of dicotyledonous polypetalous plants of the cohort *Geraniales*. The calyx is small, the stamens are almost always monadelphous, and the anthers are sessile on the tube or (usually) stalked. The order includes 37 genera and about 550 species, found throughout the warmer but rare in the temperate regions of the globe.

meliaceous (mē-lī-ā'shi-us), *a.* Belonging to or resembling the *Meliaceae*. Also *cedrelaceous*.

Meliad (mē-lī-ad), *n.* [*Gr. Μηλιάδες*, nymphs of fruit-trees (or of flocks), < *μήλον*, an apple or any tree-fruit (or *μήλον*, a sheep or goat)] In *Gr. myth.*, a nymph of fruit-trees or of flocks.

And from the grove

R. H. Stoddard, *The Search for Persephone*

Melanthaceae (mel'ī-an-thā'sē-ē), *n. pl.* [NL. (Bentham and Hooker, 1888), < *Melanthus* + *-aceae*] A small order of dicotyledonous polypetalous plants of the cohort *Sapindales*, characterized by irregular polygamodiceous flowers, stamens which are inserted at the base of the disk, albuminous seeds, and alternate stipulate leaves. *Melanthus* is the type genus.

Melanthus (mel-i-an'thus), *n.* [NL. (Tournefort, 1700), < *Gr. μέλι*, honey, + *άνθος*, a flower.] A genus of dicotyledonous polypetalous plants, type of the order *Melanthaceae*, characterized by a calyx which is very oblique at the base, and by having from two to four ovules in each cell. They are shrubs with alternate odd pinnate leaves (the leaflets one-sided and decurrent on the stalk), and bear terminal or axillary racemes of curious irregular flowers, the lower ones sometimes imperfect. There are 5 species, natives of the Cape of Good Hope, one of which has been introduced into the Himalayas. The common name is (*Cape*) *honey flower*, or *honey plant*, the blossoms abounding in honey.

Melibeian, Melibeian (mel-i-bē'an), *a.* [*L. Melibæus*, name of a shepherd in Virgil's first eclogue (a dialogue), < *Gr. Μελίβοιος*, cf. fem. *Μελίβοια*, a personal name] In *rhet.* and *poetry*, alternate, alternately responsive; alternating; amœbean.

melic (mel'ik), *a.* [*Gr. μελικός*, pertaining to song, < *μέλος*, a song, strain, melody] Pertaining to song, intended to be sung. Applied especially to the more elaborate form of Greek lyric poetry, as distinguished from iambic and elegiac poetry.

The exact relation of *melic* poetry to the cantonal dialect.
Amer Jour Philol., VII 234

Melica (mel'ī-kā), *n.* [NL. (Linnæus, 1787), < *It. melica*, the great millet, < *L. mel*, honey] A genus of grasses of the tribe *Festuceae*, type of the subtribe *Meliceae*. The upper glumes are empty, and the spikelets are often quite large and erect or spreading. They are erect perennial plants, often tall, with usually slender panicles, and flat or convolute leaves. About 30 species are known, having a wide range over the globe, but mostly natives of temperate climates. They are handsome grasses, but of no great agricultural value, though some serve the purpose of pasture. *Melica* grass is a general name for the species.

Meliceae (mē-lis'ē-ē), *n. pl.* [NL. (Bentham and Hooker, 1883), < *Melica* + *-eae*] A subtribe of grasses of the tribe *Festuceae*. It includes 4 genera, of which *Melica* is the type, and about 36 species.

melicericis (mel-i-sē-ris), *n.* [NL. < *L. meliceris*, < *Gr. μελικηρίς*, a tumor so called, < *μέλι*, honey, + *κηρίς*, wax] In *pathol.*, an encysted tumor containing matter like honey in color and consistence, usually a hygroma.

melicerosus (mel-i-sē-rus), *a.* [*Gr. μελικερός* + *-ous*] Of the nature of meliceris; affected with meliceris; as, a *melicerosus* tumor.

1. Flowering plant of Melic-grass (*Melica nutans*). 2. The panicle. 3. A spikelet; 4. the empty glume; 5. a flowering glume, side view; 6, the same, back view.

meliograss (mel'ik-grās), *n.* Any grass of the genus *Melica*.

Melicococa (mel-i-kok'ā), *n.* [NL. (Jacquin, 1763), < *Gr. μέλι*, honey, + *κόκκος*, a berry.] A genus of trees of the natural order *Sapindaceae*, type of the tribe *Melicocceae*. They are trees of considerable size, with alternate, abruptly pinnate leaves, and elongated, many flowered racemes or panicles of small whitish flowers. See *honeyberry*.

Melicocceae (mel-i-kok'sē-ē), *n. pl.* [NL. (Radlkofer, 1887), < *Melicococa* + *-eae*] A tribe of the natural order *Sapindaceae*, the soapberry family. It embraces 9 genera, *Melicococa* being the type, and 48 species, found principally in the tropics.

melicotont, *n.* Same as *melocoton*.

Melidae (mel'ī-dē), *n. pl.* [NL., < *Meles* + *-ida*] A family of aretoid carnivorous mammals, composed of the badgers, rats, and skunks, corresponding to the three subfamilies *Melinae*, *Melivorinae*, and *Mephitisinae* of the family *Mustelidae*. See these words.

Melieae (mē-lī'ē-ē), *n. pl.* [NL. (Adr. Jussieu, 1830), < *Melia* + *-eae*] A tribe of dicotyledonous polypetalous plants of the natural order *Meliaceae*. The cells of the ovary contain two ovules, and the seeds have a fleshy albumen and plano convex or foliaceous cotyledons. *Melia* is the type genus.

Meliorax (me-lī'e-raks), *n.* [NL., < *Gr. μέλος*, a song, + *ἔραξ*, a hawk.] A genus of African diurnal birds of prey of the family *Falconidae*.

Chanting Hawk (*Melierax muscivora*)

founded by G. R. Gray in 1840; the chanting hawks. There are several species, the best-known of which are *M. canorus*, *cantans*, or *muscivorus* of South Africa and *M. poliozonus*.

Melifera, meliferous. See *Melifera*, *melliferous*.

Melithæes (mel-i-jē-thēz), *n.* [NL., < *Gr. μελιθήης*, Doric *μελιθήης*, honey-sweet, < *μέλι*, honey, + *θήη*, rejoice] A genus of pentamerous beetles of the family *Nitidulidae*. There are over 100 species, mostly of Europe, where they are sometimes called *glow beetles*; they feed on various flowers, eating the pollen and fruiting organs. In this way *M. æneus* injures cruciferous vegetables.

mellitæ, mellitæ (mel'ī-lit), *n.* [Prop. *mellitæ*, < *Gr. μέλι*, honey, + *λίθος*, stone] A mineral of a yellow or grayish yellow, found at Tivoli and Capo di Bove, near Rome. It occurs in very minute tetragonal crystals in the fissures and cavities of lava, also as an essential constituent of certain kinds of basalt, it is a silicate of aluminum, magnesium, and calcium.

mellilot (mel'ī-lot), *n.* [*OF. mellilot*, *mellilot*, *merilot*, *F. melilot* = *Sp. Fg. melilot* = *It. melilot*, *mellilot*, < *L. melilotos*, < *Gr. μελλιλωτον* or *μελιλωτος*, a kind of clover, < *μέλι*, honey, + *λωτός*, lotus; see *lotus*.] A plant of the genus *Melilotus*.

Melilotus (mel-i-lō'tus), *n.* [NL. (A. L. de Jussieu, 1789). see *mellilot*.] A genus of plants of the natural order *Leguminosae*, the pulse family, the suborder *Papilionaceae*, and the tribe *Trifoliceae*; the clovers. It is distinguished by a small, fleshy, subglobose or obovate legume which is indehiscent or at length two-valved. The plants are herbs, with pinnately trifoliate leaves having adnate stipules, and small white or yellow flowers, growing in loose racemes. About 10 species are known, which are found in the temperate and sub-tropical regions of the northern hemisphere. When dried, they have the peculiar fragrance of the Tonka bean or the vernal grass, owing to the presence of the principle called *coumarin* (which see). General names for the genus are *mellilot* and *sweet clover*. *M. alba*, the white mellilot or honey lotus, also called *Cabul clover*, is an excellent bee-plant, but of little value as forage, and in some places a troublesome weed. *M. officinalis*, the common or yellow mellilot, is, like the last, widely spread over Europe and Asia, and naturalized in America. It was formerly of medicinal repute, sold by the herbalists as *balzam-flovers*, but has disappeared from scientific medicine. See *hart's clover* and *king's-clover*.

Melinae (mē-lī'nē), *n. pl.* [NL., < *Meles* + *-inae*.] A subfamily of *Mustelidae*, typified by the genus *Meles*, the badgers. The form is stout and squat, the habits are terrestrial and fossorial. There are four leading forms of *Melinae*, the European *Meles*, the Asiatic *Arctonyx* and *Mydaus*, and the American *Tamias*. Also *Melina*.

meline (mē'lin), *a* and *n.* [*L. meles*, a badger (see *Miles*), + *-mel*] *I. a* Badger-like; of or pertaining to the *Melina*.

II. n. A badger of any kind, any member of the *Melina*.

melingt, *n.* [Verbal *n.* of *melt*, *v.*] Talk, conversation.

Will'tham to the window witteril might send
gilt Mellors with hire maydenen in melling there sete
William of Palerne (E. E. T. S.), I 700

melinite (mā'lin-it), *n.* An explosive of French invention, said to be composed of picric acid, gun-cotton, and gum arabic. It has been successfully used in charging shells, and its explosive force has been variously presented as from three to eleven times that of gunpowder, the smaller figure being the most probable. [Recent.]

melinophane (mel'ī-no-fan), *n.* [Prop. **melinophane*, < *Gr. μέλι*, honey, + *-φανής*, appearing, clear, < *φαίνωμαι*, appear] In *mineral.*, a silicate of beryllium, calcium, and sodium, occurring in honey-yellow or sulphur-yellow plates in the zircon-xyenite of Norway. The name is changed, in Dana's system, to *mclphanite* (meliphane).

melliorate (mē'lyo-rāt), *v.*, *pret.* and *pp. melliorated*, *ppr. melliorating* [*L. mellioratus*, *pp.* of *melliorare* (> *It. meglio*, *are*, *migliorare* = *Pg. meliorar* = *Sp. mejorar* = (*OF. meliorer*, *melliorer*), make better, < *mellus*, better (compare of *bonus*, good), = *Gr. μέλλω*, adv., rather, compare of *μάλα*, adv., very much] *I. trans.* To make better, improve, ameliorate.

Grace does not give us new faculties and create another nature, but *melliorates* and improves our own.
Jrr Taylor, Works (ed. 1835), II 269

Tragedy was found the most pleasing vehicle of conveying moral truths, of *melliorating* the heart, and extending the interests of humanity.

Goldsmith, *Origin of Poetry*

II. intrans. To grow better, be improved.

Yesterday not a bird peeped, the world was barren, peaked and pling to day 'tis inconceivably populous, creation swarms and *melliorates*.

Emerson, *Works and Days*

melliorator (mē'lyo-rā-tēr), *n.* Same as *melliorator*.

mellioration (mē'lyo-rā'shon), *n.* [= *OF. mellioration*, < *L. mellioratus* (n-), bettering, < *melliorare*, make better. see *melliorat*.] *I.* The act or process of making or becoming better; improvement; amelioration.

Digging yearly about the roots of trees, which is a great means both to the acceleration and *mellioration* of fruits, is practised in nothing but in vines.

Bacon, *Nat. Hist.*, § 433

By an insight into chymistry one may be enabled to make some *melliorations* (I speak not of transmutations) of mineral and metalline bodies.
Boyle, Works, I 354

2. pl. In *Scots law*, improvements made by a tenant upon the property which he rents, and for which he is in certain cases entitled to compensation from the landlord.

melliorator (mē'lyo-rā-tōr), *n.* (One who or that which melliorates or makes better.)

The greatest *melliorator* of the world is selfish, huckstering Trade.
Emerson, *Works and Days*

melliorism (mē'lyo-rizm), *n.* [*L. mellior*, better (see *melliorate*), + *E. -ism*] *I.* The improvement of society by regulated practical means opposed to the passive principle of both pessimism and optimism.

Melliorism, instead of an ethical, is a dynamic principle. It implies the improvement of the social condition through cold calculation, through the adoption of indirect means. It is not content merely to alleviate present suffering, it aims to create conditions under which no suffering can exist.
L. F. Ward, *Dynam. Sociol.*, II 468

2. The doctrine that the world is neither the worst nor the best possible, but that it is capable of improvement, a mean between theoretical pessimism and optimism.

It may be thought, however, that, if neither optimism nor pessimism is the conclusion to which we are led, the modified doctrine of what is called *Melliorism* may be accepted.
W. R. Sorley, *Ethics of Naturalism*, p. 271.

The only good reason for referring to the source [of the word *melliorist*] is that you found it useful for the doctrine of *melliorism* to cite one unfashionable confessor of it in the face of the fashionable extreme.

George Eliot, *Letter to James Sully*, Jan. 19, 1877

melliorist (mē'lyo-rist), *n.* and *a.* [*L. mellior*, better, + *E. -ist*] *I. n.* One who accepts the practical or the theoretical doctrine of *melliorism*.

I am not, however, a pessimist—I am, I trust, a rational optimist, or at least a *mellorist*.

Dr J. Brown, Spare Hours, 3d ser., p. 27

In her general attitude toward life, George Eliot was neither optimist nor pessimist. She held to the middle term, which she invented for herself, of *mellorist*. She was cheered by the hope and by the belief in gradual improvement of the mass.

Cross, Lit. of George Eliot, III, 309

I don't know that I ever heard anybody use the word *mellorist* except myself.

George Eliot, Letter to James Sully, Jan. 17, 1877

II. a Of or pertaining to mellorism or mellorists

If we adopt either the optimist view or the *mellorist* view—if we say that life on the whole brings more pleasure than pain, or that it is on the way to become such that it will yield more pleasure than pain, then these actions by which life is maintained are justified, and there results a warrant for the freedom to perform them.

II. Spencer, Man vs. State, p. 96.

melloristic (mē-lyō-ris'tik), *a.* [*< mellorist + -ic*] Of or pertaining to mellorism correlated with *optimistic* and *pessimistic*.

Too scientifically *melloristic* for the common herd.

The Academy, March 3, 1888, p. 148

mellority (mē-lyōr'i-ti), *n.* [*< NL mellorita(-t)-s, < L mellor, better, see meliorate*] The state of being better, betterness. [Rare]

Aristotle ascribeth the cause of this *mellority* or betterness unto the air.

Holland, tr. of Plutarch, p. 613

This colour of *mellority* and preeminence is a signe of enervation and weakness.

Bacon, Colours of Good and Evil

Meliphaga (mē-lif'a-gā), *n.* [*NL, also, erroneously, Meliphaga, neut. pl. of *meliphagus, see meliphagous*] The typical genus of *Meliphagidae*. The term has been used with great latitude and little discrimination for all the family and some other birds, but is now restricted to a single species, *M. phrygia* of Australia, known as the *black and yellow honey eater*. See *honey eater*.

melliphan (mē-lif'a-n), *n.* A bird of the genus *Meliphaga* a honey-eater. Also, erroneously, *melliphan*.

Meliphagidae (mē-lī-faj'i-dō), *n. pl.* [*NL, also Meliphagida, < Meliphaga + -idae*] A family of tenonotial oscine passerine birds, typified by the genus *Meliphaga*, belonging to the group *Cinnamomorphae* of the order *Passeres*, the honey-eaters or honey-suckers. They are closely related to the *Neolariniidae*, with which they share the character of the protractile bill, and pointed tongue. The bill is of variable length and degree of slenderness, but is always curved, with a prominent culmen, the nostrils are basal, and situated in a large membranous nasal fossa never entirely covered with feathers, and they are linear or oval in shape with or without an operculum. The first primary (except in *Zosterops* and *Eutamias*) is about half as long as the second. The wings, tail, and feet vary in character with the genera, the anterior toes and their claws are short, the former much united at base and the hallux is large and strong. The plumage inclines to green and yellow colors. It is never blue, and is red only in one group, the *Myzomela*. Parts of the head and neck are often bare, and variously wattled or carunculate. The family is confined to the Old World, and is especially characteristic of the Australasian and Polynesian regions, though the range of the *Melithreptidae* is much more extensive. The species number nearly 200 referable to about 25 genera. The family is now usually divided into 3 subfamilies: *Meliphaginae*, *Myzomelinae*, and *Melithreptinae*.

melliphanidan (mē-lī-faj'i-dan), *a* and *n.* **I. a** Of or pertaining to the family *Meliphagidae*.

II. n A melliphan or honey-eater

Meliphaginae (mē-lī-faj'i-nē), *n. pl.* [*Also Meliphaginae, NL, < Meliphaga + -inae*] The typical subfamily of *Meliphagidae*. With few exceptions, the group is characteristic of the Australasian and Polynesian regions.

melliphagine (mē-lī-faj'i-jin), *a* and *n.* **I. a** Of or pertaining to the subfamily *Meliphaginae*, less strictly, same as *melliphanidan*.

II. n A melliphan or honey-eater of the subfamily *Meliphaginae*

melliphagous (mē-lī-faj'i-gus), *a.* [*Also melliphagous, < NL *meliphagus, < Gr μέλι, honey, + φαγεῖν, eat*] Feeding upon honey; molliorous.

melliphanite (mē-lī-faj'i-nit), *n.* [*< Gr μέλι, honey, + φανης, appearing, clear, + -ite²*] See *melliphanite*.

mellipult, *n.* [*< Gr μέλι, honey, + L pellere, pp. pulsus, drive out. Cf catapult*] A honey-extractor. *Phon.* Diet. Agriculture, p. 48.

melisma (mē-lis'mā), *n.* [*NL (> It), < Gr μέλισμα, a song, < μέλιζω, sing, warble, < μέλος, song*] In music (a) A song, melody, or air, as contrasted with a recitative or declamatory passage. (b) A melodic decoration, grace, flourish, or roulade. (c) A cadenza.

mellismatic (mē-lis-mat'ik), *a.* [= It *mellismatico*, as *mellismatico* (*-t*) + *-ic*] In music (a) Melodious. (b) Ornamented, adorned—*Mellismatic singing or playing*, a style of vocal or instrumental performance in which a great number of ornaments, as trills, mordents, runs, etc., are introduced—

Mellismatic song, vocal music in which there is more than one note to a syllable opposed to *syllabic song*, in which there is only one note to each syllable.

mellismatics (mē-lis-mat'iks), *n.* [*Pl of mellismatic see -ics*] In music, the art of florid or decorated vocalization.

Melissa (mē-lis'a), *n.* [*NL (Tournefort, 1700), < Gr μέλισσα, Attic μέλισσα, a bee, < μέλι (μέλιτ-), honey see mell²*] 1. A genus of plants of the natural order *Labiata*, the tribe *Satureineae*, and the subtribe *Melisseae*. It is distinguished by a calyx which is distinctly two lipped, by an exerted corolla tube, which is recurved ascending below the middle, and by the divergent anther cells. They are herbs, with dentate leaves and loose axillary clusters of white or yellowish flowers. Three or four species are known, from Europe and central and western Asia. *M. officinalis*, from southern Europe, is the common lemon-balm of the gardens. 2. In zoöl., same as *Andrena*.

melissa-oil (mē-lis'a-oil), *n.* A volatile oil obtained from balm, *Melissa officinalis*, which gives to the plant its aromatic, lemon-like odor—*Indian melissa-oil*, a fragrant oil distilled in India from a species of *Andropogon*. See *Andropogon* and *lemon grass*. Also called *verbena oil*.

Melisseae (mē-lis'e-ē), *n. pl.* [*NL (Lindley, 1846), < Melissa + -ae*] A subtribe of labiate plants of the tribe *Satureineae*. The calyx has almost always thirteen quite prominent nerves, the corolla is two lipped, with the tube usually exerted, and the stamens are ascending at the base and divergent above. It embraces 14 genera, *Melissa* being the type, and about 200 species. They are usually strong scented aromatic herbs. The genus *Andrena*, the American pennyroyal, belongs to this subtribe.

melissyl (mē-lis'il), *n.* [*< Gr μέλισσα, a bee, + υλη, matter*] A hypothetical radical (*C₃₀H₄₆*) which occurs in many compounds derived from wax. The more difficultly soluble part of beeswax consists of melissyl palmitate. Also called *myrcyl*.

Melissuga, Melisugae, etc. See *Melissuga*, etc.

Melitaea (mel-i-tē'a), *n.* [*NL, < Gr μέλιτ(-), honey*] 1. In entom., a genus of nymphalid butterflies allied to *Argynnis*, containing about 50 species, chiefly European and North American, checkered with brown, yellow, and white, and not silvered on the under side, which has bands of white and yellow. *M. phaedra* is a common and characteristic species of North America, its larvae feed on *Celtis*, and hibernates gregariously in a web. The British species like those of *Argynnis*, are known to English collectors as *fritharctes*.

2. A genus of alcyonarians or sea-fans of the family *Isalida*, or giving name to a family *Melithaeidae*. The polypary is branched as in the gorgonians or true sea fans and composed of alternating hard and soft or calcareous and coraceous joints, the latter much larger than the former, which form bead like nodes along the stem. *M. ochracea* is a yellowish coral from the Indian and Pacific oceans. Also *Melithaea*, *Melithaea*, *Melithaea*.

Melithaeidae (mel-i-tē'a-i-dō), *n. pl.* [*NL, < Melithaea + -idae*] A family of isidaceous alcyonarian corals, typified by the genus *Melithaea*, having porous or corky nodes. Also *Melithaeidae*.

melitæmia (mel-i-tē'mi-a), *n.* [*NL, irreg for *melithæmia, < Gr μέλιτ(-), honey, + αίμα, blood*] In *pathol.*, the presence of an abnormal quantity of sugar in the blood.

Melitophili (mel-i-tof'i-lī), *n. pl.* [*NL, < Gr μέλιτ(-), honey, + φίλος, loving*] In Latreille's system, the sixth and last section of *Scarabaeidae*, composed of the old genera *Trichius*, *Gohathus*, and *Cetonia*. It corresponds more or less exactly with the modern family *Cetoniidae*. Also, erroneously, *Melitophilii*.

mellitophiline (mel-i-tof'i-lin), *a* Pertaining to the *Melitophili*, or having their characters, cetoniian. Also *mellitophiline*.

melitose (mel-i-tōs), *n.* [*< Gr μέλιτ(-), honey, + -ose*] A sugar (*C₁₂H₂₂O₁₁*) obtained from the manna which falls in opaque drops from various species of *Eucalyptus* growing in Tasmania. It is a crystalline solid, dextrorotatory, and is directly fermentable. It is probably a compound of raffinose and sucrose.

Melitta (mē-lit'a), *n.* Same as *Andrena*.

Melitteae (mē-lit'e-ē), *n. pl.* [*NL (Endlicher, 1836), < Melittis + -ae*] A subtribe of labiate plants of the tribe *Stachydeae*, characterized by a broad calyx and a much-exserted corolla-tube, with the posterior lip broad and somewhat concave. It embraces 5 genera, *Melittis* being the type, and 3 species, found principally in the temperate regions of the northern hemisphere.

Melittis (mē-lit'is), *n.* [*NL (Linnaeus), < Gr μέλιττα, Attic form of μέλισσα, a bee see Melissa*] A genus of labiate plants of the tribe *Stachydeae*, type of the subtribe *Melitteae*, characterized by a three-lobed calyx, by having the cells of the anther divergent, and by the flower-cluster usually consisting of six flowers. *M.*

mellisophyllum is the only species. See *balm*, 7, and *honey-balm*.

Melodus (mel'ō-dūs), *n* pl [NL, < Gr *μελωδῶσα*, fem pl. of *μελωδῶν*, singing, ppr of *μελωδεῖν*, sing, < *μελῶς*, singing see *melody*.] In Gloger's arrangement of birds (1834), one of two suborders of passerine birds, including the singing *Passeres*, and nearly equivalent to the *Acromyidi* or *Oscines*.

melodusine (mel'ō-dūs'in), *a* Having the characters of or pertaining to the *Melodus*, oscine or oscinine, acromyodine.

melody (mel'ō-di), *n*, pl *melodies* (-diz) [*< ME melody*, *melodyc* (= D *melodie* = G *melodie*, *melodi* = Dan Sw *melodi*), < OF *melodie*, F. *melodie* = Sp *melodia* = Pg *it melodia*, < LL *melodia*, < Gr *μελωδία*, a singing, a tune to which lyric poetry is set, < *μελῶς* (> LL *melodus*), singing, musical, < *μελῶς*, song, strain, melody, + *ωδή*, song, ode see *ode*. Cf. *comedy*] 1. In general, a succession of agreeable musical sounds; sweet sound; song; tune; music.

Thus endured the love and the *melody* all the meta while
Merlin (E. F. T. S.), III 454

The birds chant *melody* on every bush
Shak, Tit And, II 3 12.

Specifically.—2. In music: (a) A succession of tones, whether pleasing or not. In this sense *melody* is coordinate with *harmony* and *rhythm* as the three necessary constituents of all music. It depends essentially upon tones of relative pitch, successively arranged (b) A series of tones so related to one another as to produce a distinct musical phrase or idea. The underlying relationship may be variously established by any particular rhythmic arrangement, as in some popular dance-tunes, by the intervals of a single chord, as in arpeggiated phrases, by a diatonic order, as in scale passages; by the harmonic connections between successive chords of which the melody in question forms one of the voice-parts, as in simple choral writing, and by innumerable

modifications and combinations of these and similar principles. (c) The principal voice-part in a harmonic composition; usually, now, the soprano, but in older music the tenor; the cantus firmus; the air. (d) A song of clear and balanced form; an air, a tune. A melody is *authentic* when its compass extends about an octave upward from its key note or final, *playful* when its compass extends about a half octave above and below the key-note and final. It is *diatonic* when it uses only the proper tones of the scale in which it is written, *chromatic* when it uses other tones, foreign to that scale. It is *concrete* or *conjoint* when it proceeds by single degrees, upward or downward, *discrete* or *disjunct* when it proceeds by steps of more than a single degree. It is *syllabic* when but one tone is given to each syllable of the words, *sturred* when more than one tone is given to a syllable. A melody may be further described as *popular*, *national*, *artistic*, etc.

3 A melodious or tuneful poem, a poetical composition suitable for singing.

There are, no doubt, some exquisite melodies (like the "Salvina Fair") among his [Milton's] earlier poems, as could hardly fail to be the case in an age which produced or trained the authors of our best English glees.

Lowell, Among my Books, 2d ser., p. 284

Imperfect melody, a melody which does not extend throughout the mode in which it is written. — **Leading melody**. See *leading*. — **Syn.** Harmony, Rhythm, etc. See *euphony*.

Meloid (mel'ō-ē), *n*. [NL. (Linnaeus, 1758), etym. uncertain.] The typical genus of *Meloidae*, the oil-beetles, usually referred to the *Cantharidae* or blister-beetles proper. It contains those apterous species which have the body large and distended, with the elytra short, oval, and lapping over each other at the base of the suture. When alarmed these insects emit from the joints of the legs a yellowish oily liquor. In some parts of Spain they are used instead of cantharides or are mixed with them. The larvae are parasitic in the nests of bees, and

are peculiar in undergoing two hypermetamorphoses, thus existing in three distinct larval forms (See *hypermetamorphosis*). The larvae attach themselves to bees, whose eggs they destroy, and live within the egg cells, being supported by the honey intended for the young bee; hence they are called *bee bees*. It is a very large genus, of wide distribution. Fourteen species inhabit North America.

Melograph (mel'ō-gráf), *n*. [*Gr* *μελῳγραφος*, writing songs, < *μέλος*, song, melody, + *γραφειν*, write.] An electrical apparatus for recording the order and duration of the notes of a piece of music played on a piano. The depression of the keys is made to close an electric circuit, and the record is made in the same way that a message is recorded by a Morse telegraph instrument. The strip of paper is after ward punctured along the marks of the record, and passed through another machine, which, by means of the perforation, closes the circuit of a small electromotor and works a perforator. The perforator is then made to reproduce a stiff paper stencil, which is an exact copy of the written record. The stencil may then be used in the melotrope for the reproduction of the music.

meloid (mē'lōid), *a* and *n*. I. *a* Pertaining to the *Meloidae*, or having their characters.

II. *n* Any member of the family *Meloidae*.

Meloidæ (me-lō'ī-dē), *n* pl. [NL., < *Meloe* + *-idæ*.] A family of beetles typified by the genus *Meloe*, or merged in *Cantharidae*. The larvae are parasitic upon other insects, especially *Hymenoptera*.

melologue (mel'ō-log), *n*. [*F* *mélologue* (see *quot*), < *Gr* *μέλος*, song, + *λέγειν*, speak see *-ology*. Cf. *monologue*, etc.] A mixture of speech and song; a recitative, a melodrama. [Rare.]

During a stay in Italy Berlioz composed an overture to King Lear and Le Retour à la Vie, a sort of symphony, with intervening poetical declamation between the single movements, called by the composer a *melologue*. *Encyc. Brit.*, III 598.

Melolontha (mel'ō-lon'thā), *n*. [NL. (Fabricius, 1775), < *Gr* *μηλολόνθη*, *μηλόλονθη*, a kind of beetle or cockchafer.] The typical genus of *Melolonthidae*. It is represented in the Old World exclusively, 233

with about 20 species, having the third antennal joint longer than the fourth, the antennal club of the male 7 jointed, that of the female 5 jointed. *M. vulgaris* is the common cockchafer or dor-bug of Europe, often very destructive.

Melolonthidae (mel'ō-lon'thi-dē), *n*. pl. [NL., < *Melolontha* + *-idae*.] A family of lamellicorn beetles, typified by the genus *Melolontha*, now generally reduced to a subfamily of *Scarabæidae*, cockchafers. The same group of beetles, variously rated in the system, is called *Melolonthidae*, *Melolonthæ*, *Melolonthida*, *Melolonthides*, *Melolonthætes*, *Melolonthinus*.

melolonthidan (mel'ō-lon'thi-dan), *n*. A member of the *Melolonthidae*.

melolonthine (mel'ō-lon'thin), *a*. [*Gr* *Μελολονθη* + *-ινος*.] Of or pertaining to the group of beetles typified by the genus *Melolontha*.

melomane (mel'ō-mān), *n*. [*F* *mélomane* = *Sp* *melomano*, < (*Gr* *μέλος*, song, melody, + *μανής*, < *μαρθεῖν*, be mad)] Same as *melomaniac*.

melomania (mel'ō-mā'nī-ā), *n*. [*F* *mélomanie* = *Sp* *melomania*, < NL. *melomania*, < *Gr* *μέλος*, song, melody, + *μανία*, madness, frenzy.] An inordinate passion for music. Compare *musicomania*.

melomaniac (mel'ō-mā'nī-ak), *n*. [*Gr* *melomania* + *-ακ*.] One who has an inordinate passion for music.

melomany (mel'ō-mu-nī), *n*. [*F* *mélomanie*, < NL. *melomania* see *melomania*.] Same as *melomania*.

melon¹ (mel'on), *n*. [Formerly also *mellon*, *mil-lon*, *millon* (the last still in dual use), < OF. *melon*, *mellon*, *millon*, *F* *melon* = *Sp* *melon* = *Pg* *mello* = It. *mellone*, a melon, < LL. *melo(n-)*, for L. *melo-pepo(n-)* (> OF. *melo-pepon*). < *Gr* *μηλοπέπων*, a melon, so called as being apple-shaped, < (*Gr* *μήλον* (L. *malum*), apple (including also pears, peaches, etc.), + *πέπων*, a melon see *pepo*.] 1 A herbaceous succulent trailing annual plant, *Cucumis Melo*, natural order *Cucurbitaceæ*, or its fruit, the muskmelon. The plant is not known in a wild state, but its origin was referred by De Candolle to the region of the southern Caspian. It has been cultivated from time immemorial in the hot countries of the East, the melons of Persia being specially celebrated, and is now planted wherever there is sufficient summer heat to mature its fruit. The latter at its best is very rich and highly flavored. It is an ellipsoid or globular pepo, the edible part of which is the inner layer of the pericarp, the stringy and watery placenta with the seeds being rejected. The melon is grown in numberless varieties, as the cantaloup, the nutmeg, etc. In the United States this fruit, in all its forms, is known as *muskmelon*—melon being applied indifferently to it and the watermelon, or even by preference to the latter. The melon of Numbers xi 5 is thought by some to have been the watermelon (see def. 2). See *cantaloup* and *Cucumis*.

Have millions at Mihelmas, paraneps in Lent. *Traser*, Husbandrie, March (Nares.)

Insatiate with flowers, I fall on grass. *Marvell*, The Garden

2 The watermelon, *Citrullus vulgaris*.—3 A melon-shell.—4 A hemispherical mass of blubber taken from the top of the head of the blackfish, grampus, and related cetaceans; melon-blubber. The melon reaches from the snout-hole to the end of the nose, and from the top of the head down to the upper jaw.

The head was dissected on deck, first the melon was removed, then the throat, next the under jaw, and lastly the "head skin," which is the whelonian a term for the blubber on top of the head. *Fisheries of U. S.*, v. ii 230.

Gourd-melon, a pumpkin like fruit, used in India for curries. See *benignus*.—**Hairy melon**. Same as *abdulani*.—**Sweet-scented melon**, a variety of muskmelon sometimes regarded as a species, *Cucumis Dudaim*. Also called *apple-cucumber*.

melon² (mel'on), *n*. [Abbr. of *padmelon* or *paddy-melon*.] Same as *padmelon*.

melon-blubber (mel'on-blub'er), *n*. The melon of a cetacean. See *melon*¹.

melon-cactus (mel'on-kak'tus), *n*. See *Melocactus*.

melon-caterpillar (mel'on-kat'er-pil-ār), *n*. The larva of a pyralid moth, *Phacellura* (*Eudrioptis*) *hymenata*. It is yellowish-green, 1½ inches long, and is destructive to melons and other pepos or cucurbitaceous fruits.

Melongenidae (mel-on-jen'ī-dē), *n*. pl. [NL., < *Melongena* (< *Gr* *μήλον*, apple, + *γενος*, kind), the typical genus, + *-idae*.] A family of probosciferous rachioglossate gastropods, typified by the genus *Melongena*. The animal has the head elongated, narrow lateral teeth with an enlarged outer cusp, and the shell more or less pyriform. Also *Melongenæ*, as a subfamily.

melon-hole (mel'on-hōl), *n*. A hole made by the padmelon or padmelon, very dangerous for horsemen, often applied to other similar holes. [Australian.]

The plain is full of deep *melon holes*, and the ground is rotten and undermined with rats.

A. C. Grant, Bush life in Queensland, I 220

meloniform (mel'on-i-fōrm), *a*. Melon-shaped.

melon-oil (mel'on-oil), *n*. The oil of the melon of a cetacean. It is valuable for lubricating watches and other fine machinery, and is by some preferred to porpoise-oil.

melon-shaped (mel'on-shāpt), *a*. Having the form of a melon, oval with depressed lines running from end to end, the intervals between them being convex, so that a transverse section in any part has a scalloped outline. This form is found in many fruits, seeds, the eggs of insects, etc.

melon-shell (mel'on-shel), *n*. The shell of a mollusk of the genus *Melo*.

melon-thick (mel'on-thik), *n*. A West Indian name of the common melon-cactus, *Melocactus communis*.

melon-thistle (mel'on-this'tl), *n*. A melon-shaped cactus, as those of the genus *Melocactus*.

melon-tree (mel'on-tīō), *n*. The papaw, *Carica Papaya*.

melon-worm (mel'on-wērm), *n*. Same as *melon-caterpillar*.

Melopelia (mel'ō-pē'li-k), *n*. [NL., < *Gr* *μέλος*, song, + *πέλις*, a dove, rock-pigeon.] A genus of the family *Columbidae* and subfamily *Zenaidurina*, the white-winged doves. They have the outer primary normal, the tail rounded, shorter than the wing, and 12 feathered, the bill slender, black, and as

White-winged Dove (*Melopelia leucotis*)

long as the tarsus, a large bare (irradiated) space, the neck with metallic lustre, a blue black auricular spot, a large white mark on the wings, and the sexes alike in plumage. *M. leucotis* is a common dove of the southwestern parts of the United States, conspicuous by reason of the white on the wings.

Melophagus (mē-lof'a-gus), *n*. [NL., < (*Gr* *μήλον*, a sheep, + *φαγναι*, eat)] A genus of pupiparous parasitic insects of the dipterous family *Hippoboscidae*, founded by Latreille in 1802. *M. ovinus*, a well known wingless species, is the common sheep tick. The genus is also called *Melophita* and *Melophaga*.

melophone (mel'ō-fōn), *n*. [*Gr* *μέλος*, a song, + *φωνή*, voice.] A kind of concertina.

melophonic (mel'ō-fōn'ik), *a*. [*Gr* *μέλος*, song, + *φωνή*, voice, + *-α*.] Pertaining to music or its performance.

melophonist (mel'ō-fō-nist), *n*. [*Gr* *μέλος*, song, + *φωνή*, voice, + *-ιστής*.] A singer of melodies.

Here, as in the case of the Hebrew *melophonists* I would insinuate no wrong thought.

Thackeray, A Dinner in the City III

melopiano (mel'ō-pi-an'ō), *n*. [NL., < (*Gr* *μέλος*, song, + *It* *piano* see *piano*)] A form of pianoforte, invented by Caldara in 1870, on which a sustained tone, with a chance for crescendo and diminuendo effects, is made possible through an ingenious arrangement of little hammers that strike rapidly upon the strings and thus prolong and control their vibration. The quality of the tone produced is sweet and effective.

meloplast (mel'ō-plast), *n*. [*Gr* *μέλος*, song, + *πλάσσειν*, a mold, model, < *πλάσσειν*, form see *plastic*.] A system of teaching the rudiments of music, invented by P. Galin in 1817, by which many of the complications of the ordinary notation are avoided at first.

meloplasty (mel'ō-plas-tī), *n*. [*Gr* *μήλα*, pl., the cheeks (pl. of *μήλον*, apple), + *πλασσειν*, form see *plastic*.] In *surg.*, the transplantation of tissue to supply new material for the cheeks when a considerable part has been destroyed by disease or injury.

melopoeia (mel-ō-pō'yē), *n* [LL, < Gr. *melopodia*, a making of lyric poems, musical composition, < *melos*, song, + *poiein*, make: see *poet*] The art or science of constructing melodies, melodies

Melopsittacus (mel-op-sit'a-kus), *n* [NL, < Gr. *melos*, song, + *psittakos*, a parrot] An Australian genus of small long-tailed parrots, the grass-

Zebra Grass-parakeet (*Melopsittacus undulatus*)

parakeets. *M. undulatus* is one of the commonest and prettiest parrots of the avicularia, and one of the few which breed in confinement. The birds are amiable and sociable, with more melodious notes than is usual in this family.

Melospiza (mel-ō-spi-zā), *n* [NL, < Gr. *melos*, song, + *psitta*, a finch.] A genus of the finch family, *Fringillidae*, founded by Baird in 1858, containing a number of fully spotted and streaked species peculiar to North America; the song-sparrows. The best known is the common song sparrow, *M. melodia*, which abounds in most parts of the United States and runs into several varieties in the West. *M. cinerea* is a much larger and otherwise distinct species found in Alaska. Two common sparrows of eastern parts of the United States and of Canada are the swamp sparrow, *M. palustris*, and Lincoln's finch, *M. lincolni*.

Melothria (mē-loth'ri-ā), *n* [NL (Linnaeus, 1767), < (Gr. *mēlon*, an apple (L. *melo*, melon), + (*thron*, fig-leaf, leaf)] A genus of cucurbitaceous plants of the series *Plagiopermeae*, and the cucumber tribe *Cucumernaceae*. The male flowers are usually in racemes, the anthers subsessile, frequently with a lobed connective produced from the apex, and the fruit usually on a long and slender peduncle. It embraces about 58 species, inhabiting the warmer regions of both hemispheres. They are mostly graceful vines, either climbing or prostrate, with membranaceous palmately lobed or divided leaves, simple tendrils, and small yellow or white flowers. *M. pendula*, the creeping cucumber (which see, under *cucumber*), is the best-known species.

melotrope (mel'ō-trōp), *n* [< Gr. *mēlos*, song, + *trope*, a turn, turning, < *trépō*, turn.] A piano fitted with a mechanical device for automatically reproducing a piece of music by means of a melograph sten-

cil. The melotrope is merely mechanical in its operation, and is intended, as far as possible, to imitate the motion of the fingers in playing upon the keys of the instrument. See *Amer. N. S.*, [LIX] 374.

mel-pell, *adv* Same as *pell-mell*.

Without any examination had to know where the fault was, [a band of men] slew *mel pell* both guilty and innocent, to the number of 7,000. Hooker, *Eccles.* [Polity, viii] 9.

Melpomene (mel-pom'e-nē), *n*. [L.,

Statue of Melpomene, in the Louvre Museum.

< Gr. *Melpomēnē*, one of the Muses, prop. ppr. fem. of *μελπομαι*, sing] 1. In *class. myth.*, originally, the Muse of song and musical harmony, looked upon later as the especial patroness of tragedy. She is generally represented as a young woman, bearing the tragic mask and often the club of Hercules, and with her head wreathed with vine-leaves in token of her relation with the dramatic deity, Bacchus. 2. A planetoid, the eighteenth in order of discovery, first observed by Professor Hind at London in 1852.

meirose (mel'rōs), *n* [< NL *mel rose* L. *mel*, honey, *rosa*, gen. of *rosa*, rose] Honey of roses, a preparation consisting of powder of red rose, clarified honey, and diluted alcohol.

What I used was a mixture of *meirose* with sixteen drops of the muriatic acid. Sir W. Fordyce, On Muriatic Acid, p. 8.

melt¹ (melt), *v*, pret. *melted*, pp *melted* (or *molten*), ppr *melting* [< ME *melten* (pret *malt*, pp *molten*), < AS *meltan*, *mltan* (pret *mealt*, pp *molten*), melt, = Icel. *melta*, melt, digest, (Gr. *melēin*, liquefy, melt; cf. O Bulg. *mludā*, soft. Akin to *malt*¹, *mit*¹] I. *intrans* 1. To become liquid through heat, be changed from a fixed or solid to a flowing state by heat.

This Pandare that neyghes *melt* for wo and routhe. Chaucer, *Troilus*, l. 582.

These fellows commonly, which use such deceitfulness and guile, can speak so finely that a man would think butter should scant *melt* in their mouths. Latimer, Misc. Select.

O, that this too too solid flesh would *melt*, Thaw, and resolve itself into a dew! Shak., *Hamlet*, l. 2. 129.

2. To suffer dissolution or extinction, be dissipated or wasted.

All the inhabitants of Canaan shall *melt* away. Ex. xv. 15.

My heart *melted* away in secret raptures. Addison, *Vision of Mirza*.

3. To be softened to love, pity, tenderness, sympathy, or the like, become tender, mild, or gentle.

I should *melt* at an offender's tears. Shak., 2 *Hen. VI.*, l. 1. 126.

4. To be weakened or broken, be subdued, as by fear.

As soon as we had heard these things, our hearts did *melt*, neither did there remain any more courage in any man. Josh. ii. 11.

5. To pass, as one thing into another, so that the point of junction is imperceptible, pass by imperceptible degrees; blend, shade.

The twilight *melted* into morn. Tennyson, *Day-Dream*, The Departure.

II. *trans* 1. To reduce from a solid to a fluid state by means of heat, liquefy, fuse, as, to *melt* iron, lead, wax, or tallow, to *melt* ice.

When sun doth *melt* their snow. Shak., *Lucrece*, l. 1218.

Get me some drink, George. I am almost *molten* with fretting. Beau and Fl., *Knight of Burning Pestle*, l. 5.

Inscriptions, victories, buildings, and a thousand other pieces of antiquity (on coins) were *melted* down in these barbarous ages. Addison, *Ancient Medals*, l. 3.

2. Loosely, to make a solution of, liquefy by solution, dissolve, as, to *melt* sugar in water.

3. Figuratively, to soften, as by a warming and kindly influence, render gentle or susceptible to mild influences, as to love, pity, or tenderness.

For pity *melts* the mind to love. Dryden.

Her noble heart was *molten* in her breast. Tennyson, *Princess*, vi.

=Syn. To mollify, subdue. *Melt*, *Dissolve*, *Thaw*, *Fuse*. Two words, popularly confounded, though scientifically very distinct, are *melt* and *dissolve*. The former signifies to bring a substance from a solid to a liquid condition by the agency of heat alone, the latter signifies the bringing about of this result by distributing the particles of the substance acted on among the particles of another substance which is itself liquid, and this process is termed the *solution* of the solid substance. *Thaw* differs from *melt* in being applicable only to substances whose ordinary condition is that of a liquid, and which have become solid in consequence of the abstraction of heat, and therefore return to the liquid condition as if of themselves. (*Chambers's Journal*) *Dissolve* is much used as a synonym of either *melt* or *thaw*. *Fuse* is sometimes synonymous with *melt* (as, to *fuse* a wire by electricity), but it is more often used of melting together, as, bell metal is made by *fusing* copper and tin. See the definitions of these words.

melt¹ (melt), *n*. [< *melt*¹, *v*.] 1. The melting of metal, the running down of the metal in the act of fusion.—2. The charge of metals placed in a cupola or pot for melting.

12,867 *melts* of ingots were made for coinage during the year. Rep. of Sec. of Treasury, 1886, p. 175.

3. Any substance that is melted.

The *melt* is then allowed to cool, and is dissolved in a large quantity of water and neutralized with hydrochloric acid. Benedict, *Coal-tar Colours* (trans.), p. 216.

melt² (melt), *n*. Same as *melt*¹. **meltable** (mel'ta-bl), *a*. [< *melt*¹ + *-able*.] Capable of being melted; fusible.

Iron is the most impure of all metals, hardly *meltable*. Fuller, *Worthies*, *Salop*, II. 238. (Davies.)

meltda (mel-tā'dā), *n*. [E. Ind.] A murine rodent found in Madras, *Golunda meltda*. J. E. Gray.

melter¹ (mel'tēr), *n* 1. One who melts; specifically, the official in a mint who superintends the melting of gold and silver for coining.

The *melter* *melts* in vayne, for the euell is not taken away from them. Bible of 1551, Jer. vi. 29.

Thou *melter* of strong minds. Beau and Fl., *False One*, II. 8.

The entire melting requires about sixteen hours, and is carefully watched by the master *melter*, who urges the furnaces to their utmost intensity. Harper's Mag., LXXIX. 250.

2. A furnace, pot, or crucible used for melting any substance; a melting-pot, as, a *melter* for combining the ingredients in the manufacture of sealing-wax. Workshop Receipts.

melter² (mel'tēr), *n* Same as *melter*.

melting (mel'ting), *a* 1. Disposed to melt or soften, feeling or showing tenderness, tender, compassionate.

To kindle onwards, and to steel with valour. The *melting* spirits of women. Shak., J. C., II. 1. 122.

One whose subdued eyes, Albeit unused to the *melting* mood, Drop tears. Shak., *Othello*, v. 2. 349.

2. Adapted to melt or soften; affecting, moving, as, a *melting* speech.

As the mind is pitched, the ear is pleased. With *melting* airs or martial. Cowper, *Task*, vi. 3.

melting-furnace (mel'ting-fēr'nās), *n* A glass-makers' furnace in which the frit for the glass is melted before it goes to the blowing-furnace. In some manufactories the glass is worked from the melting-furnace direct.

meltingly (mel'ting-li), *adv* [< *melting* + *-ly*.] In a melting manner, in a manner to melt or soften; by the process of melting. [Rare.]

Zelma lay upon a bank, that, her tears falling into the water, one might have thought she began *meltingly* to be metamorphosed to the running river. Sir P. Sidney, *Arcadia*.

meltingness (mel'ting-nēs), *n* [< *melting* + *-ness*.] The quality of melting, capability of being softened by some warming and kindly influence. [Rare.]

Give me, O thou Father of compassion, such a tender ness and *meltingness* of heart that I may be deeply affected with all the miseries and calamities, outward or inward, of my brethren. Whole Duty of Man, Collect for Charity.

melting-pan (mel'ting-pan), *n* A pan, usually in the lower part of a sugar-refinery, in which raw sugar is reduced to a syrup with water aided by heat and mechanical stirring, and from which the syrup is pumped to the blow-ups in the upper part of the refinery to be treated with lime for the precipitation of albuminous and other organic impurities.

melting-point (mel'ting-point), *n* The point or degree of temperature at which a solid body melts, the point of fusion or fusibility. See *fusion*.

melting-pot (mel'ting-pot), *n*. A crucible *melting* (mel'tith), *n*. [Probably a form of *meal-tide*.] A meal. [Scotch.]

melton (mel'ton), *n* [So called after the original manufacturer.] A stout kind of cloth for men's wear, the surface of which is without nap, and is neither pressed nor finished.

In the treatment of broad cloth, doeskins, *meltons*, and all nap finished cloth, the milling is carried so far that the fibres become densely matted. Envy Brit., XXIV. 661.

melungeon (me-lun'jon), *n* [Origin obscure; perhaps ult. < F. *mélange*, a mixture. see *mélange*.] One of a class of people living in eastern Tennessee, of peculiar appearance and uncertain origin.

They resented the appellation *Melungeon*, given to them by common consent by the whites, and proudly called themselves Portuguese. Boston Traveller, April 13, 1889.

Melurus (me-lér'us), *n*. [NL, irreg. < L. *mel*, honey, + *urus*, bear.] An Indian genus of *Ursida*, characterized by the shaggy hide, protrusile lips, and fewer and smaller teeth than those of *Ursus*, honey-bears or sloth-bears. *M. labiatus* is the aswall (which see). *Prochilus* is a synonym.

melvie (mel'vi), *v. t*; pret. and pp. *melvied*, ppr. *melvying*. [A dial. var. of *meal*¹, *v.*, < ME. *mole*,

< AS. *meiu* (*mei-*), meal: see *meal*.] To soil with meal. [Scotch.]

Sms' need has to say a grace,
Or *maive* his brow claiting

Burns, *Holy Fair*

Melyridæ (me-lir'i-dē), *n* pl [NL, < *Melyris* + *-idæ*] A family of malacoadermatous beetles, corresponding to Latreille's *Melyridæ*, typified by the genus *Melyris*

Melyridæ (me-lir'i-dē), *n* pl. [NL, pl of *Melyris*] In Latreille's classification, the third tribe of *Malacoadermæ*, or soft pentamerous beetles. The palpi are generally filiform and short; the mandibles notched; the antennae mostly serrated, in some males pectinated, the joints of the tarsi entire, and the ungues unidentate or furnished with a membranous appendage. These beetles are mostly very agile, and are found upon flowers. *Malachius*, *Dasytes*, *Zygia*, *Polecorphus*, and *Diglobocerus* are named as leading genera

Melyris (me-lir'is), *n* [NL. (Fabricius, 1775), origin obscure] The typical genus of *Melyridæ*. These insects are ordinarily found upon flowers, they are generally of small size and very gaily colored. Most of them are natives of Africa.

mem. An abbreviation of *memorandum*, placed before a note of something to be remembered

member (mem'ber), *n* [< ME *membre*, < OF (and F.) *membre* = Sp *miembro* = Pg *It. membro*, < L *membrum*, a limb, member of the body, a part, portion, or division] 1. An integral part of an animal body having a distinct function, a vital organ; particularly, in common use, one of the limbs or extremities, as a leg, an arm, or a wing

Even so the tongue is a little member, and boasteth great things
Jas iii 5

Where I was wont to feed you with my blood,

Shak, T and C, i 3 198

Specifically—(a) A person considered in relation to any aggregate of individuals to which he belongs, particularly, one who has united with or has been formally chosen as a corporate part of an association or public body of any kind, as a church or a society, often used elliptically in England for a member of Parliament, and in the United States for a member of Congress

There are not more useful *members* in a commonwealth than merchants
Addison, *The Royal Exchange*

He (Sir John Dalrymple) was strenuously supported by Sir James Montgomery, member for Ayrshire
Macaulay, *Hist Eng*, xiii

(b) A part of a discourse, or of a period or sentence, a clause, a part of a verse (c) In *arch*, any subordinate part of a building, order, or composition, as a frieze, cornice, or molding (d) In *alg*, either of the two parts or sides of an equation united by the sign of equality (=). (e) In *zool* and *bot*, a component of any higher classificatory group, thus, a species is a member of a genus, a genus is a member of a family, etc.—**Borough member**, in the British Parliament, a member of the House of Commons representing a borough—**County member**, in the British Parliament, a member of the House of Commons representing a county or a division of a county—**Divisive members**. See *divisive*—**Syn. 1. Member, Limb** *Limb* is a precise term, in the human body applying to the arms and legs. We speak of the *limb* of a tree, but rarely apply *limb* to the leg of an animal. The word has little figurative use, except in science (see definition), such expressions as "*limb* of the law," for a lawyer, and "*limb* of the devil" for a rogue, are obsolete, *limb* being used for member or part. *Member* is much freer in primary and in figurative uses for an integral or distinguishable part of a whole, as, a member of a sentence, of a family, of a society, of a state. "The tongue is a little member" (James iii 5), and so is the eye, and each of the toes, but none of them is a *limb*

membered (mem'berd), *a*. [< *member* + *-ed*] Having members; especially, having limbs used chiefly in composition, as *big-membered*, in *her.* (also *membré*), used when the limbs are of a different tincture from the body

memberless (mem'ber-less), *a* [< *member* + *-less*.] Destitute of members; simple or undivided.

membership (mem'ber-ship), *n*. [< *member* + *-ship*.] 1 The state of being a member, the office or position of a member, as of Parliament

No advantages from external church membership or profession of the true religion can of themselves give a man confidence towards God
South, *Sermons*, II xi

Jeffrey is perhaps on his way to Edinburgh to day. He is a candidate for the *Membership* there. *Carlyle*, in *Froude*.

2. The members of a body regarded collectively—*as*, the whole membership of the church

membra, *n*. Plural of *membrum*

Membracidae (mem-bras'i-dē), *n* pl [NL, < *Membrax* (< Gr *μῆμραξ*, a kind of cicada) + *-idae*] A family of homopterous *Hemiptera* with three-jointed tarsi, typified by the genus *Membrax*. It is a large group of extraordinarily diversified and grotesque forms, the prothorax especially being the seat of remarkable modifications. The coloration is not less diversified. The antennae are short and setose, with thickened base beneath the expanded edge of the clypeus, below or a little before the eyes. The legs are short and stout, and the hind tibiae are furnished with a terminal circle of spines. The species, of which there are upward of 800, are all jumpers, and are generally known as *tree hoppers*. They abound in tropical and subtropical America, where more than half the known species are found; there are many in Africa, some in Australia and the East Indies, but scarcely any in Europe

membracine (mem'brā-sin), *a* and *n* I. *a* Of or pertaining to the *Membracidae*

II. *n* A member of the family *Membracidae*

Membracis (mem'brā-sis), *n* [NL. (Fabricius, 1776), < (Gr *μῆμραξ* (*μῆμραξ*), a kind of cicada)] A genus of tree-hoppers, typical of the family *Membracidae*, having the two forward pairs of tibiae broadly flattened and fitted very closely against the breast. It is very rich in species, among which are some of the most gaily colored and beautifully decorated members of the family

membral (mem'bral), *a* [< NL **membralis*, < L *membrum*, a limb, member, see *member*] In *anat* and *zool*, of or pertaining to the limbs of an animal, as distinguished from the body proper, appendicular, as distinguished from axial (parts of the whole body).—**Membral segment**, a natural morphological division of a limb between two principal joints, thus, the forearm, between the elbow and the wrist, is a *membral segment*. See *isomere*

membranaceous (mem-brā-nā'sh-us), *a* [< L *membranaceus*, of skin or membrane, < *membrana*, skin, membrane, see *membrane*] Pertaining to or of the nature of membrane, consisting of membrane, membranous

Birds of Prey that live upon Animal Substances have *membranaceous*, not muscular stomachs
Arbuthnot, *Aliments*, vi 8

membrane (mem'brān), *n* [< F. *membrane* = Sp Pg *It. membrana*, < L *membrana*, the skin or membrane that covers the several members of the body, the thin skin of plants, a skin parchment (< Gr *μῆμρανα*, parchment), cover, surface, < *membrum*, member, see *member*] 1 A thin pliable expansive structure of the body, an expansion of any soft tissue or part in the form of a sheet or layer, investing or lining some other structure or connecting two or more structures. The term is used in the widest sense, with little or no reference to the kind of tissue which may be concerned, the membranous quality depending upon thinness and pliability, not upon texture or fabric. No hard parts, as bone and cartilage, come within the definition of membrane. Most membranes are fibrous—that is, consist wholly or in part of some form of connective tissue, in or on which may be other and more special form-elements, as the layers of cells peculiar to the mucous, the serous, and other special membranes. In some cases a sheet of nerve tissue, or of muscle tissue, constitutes a membrane, with little admixture of other elements. Some membranes chiefly consist of a network of blood vessels, with little connective tissue. Most membranes are specified by qualifying terms. See phrases following

2 In *entom*, specifically, the membranous terminal part of a hemelytrium, the membrane of the fore wing of a hemipter. See cut under *clavus*—3 A skin prepared for being written on

They consist of three bundles, containing in all 649 skins or membranes. Of these membranes, the greater part are vellum and parchment

Adipose, alveolar, atrial membrane. See the adjectives.—**Alimentary mucous membrane**. See *alimentary*.—**Arachnoid membrane, arachnoid membrane**. Same as *arachnoid*. 2.—**Basal membrane of the ligula**. In certain *Coleoptera*, a narrow membranous part between the mentum and the ligula. When more fully developed it is called the *hypopharynx*.—**Basement membrane**. See *basement*.—**Basilar membrane**. See *basilar*.—**Blastodermic membrane, the blastoderm**.—**Branchiostegal, bronchial, cellular membrane**. See the adjectives.—**Choroid membrane, the choroid**.—**Conjunctival membrane, the conjunctiva**.—**Costocoracoid membrane**. See *costocoracoid*.—**Cricothyroid membrane, the tough fibrous tissue which connects the cricoid and thyroid cartilages**.—**Deciduous membrane, the decidua**.—**Diphtheritic membrane, in pathol.**, the false membrane formed in diphtheria, composed of necrosed epithelium, or of an exudate of pus, fibrin, and epithelial scales, or of these with necrosed epithelium.—**False membrane, in pathol.**, an unorganized mem-

braniform layer, such as is produced in croupous inflammation, when it is formed of pus and fibrous and necrosed epithelium in varying amounts.—**Fenestrated membrane**. See *fenestrated*.—**Fibroserous membrane**. See *fibroserous*.—**Germinal, Henleian, Henleovian, hyaloid, hyoglossal membrane**. See the adjectives.—**Intercoracous membrane**, a tough sheet of fascia connecting two bones in their continuity, especially applied to such a tissue between the ulna and the radius, and between the tibia and the fibula.—**Investing membrane, the first layer of cells which assumes a distinctly membranous form upon the surface of the ectodermis of the ovum**. It was formerly called the *serous layer of the germinal membrane*.

—**Jacob's membrane, the bacillary layer, or layer of rods and cones of the retina of the eye**. See *bacillary*.—**Krause's membrane**, a membrane dividing the mucous fiber transversely, supposed to be indicated by the intermediate line in the light disk of striated muscle fiber. Also called *Doyle's line*, *Holtz's stripe*.—**Limiting membrane of the retina, external and internal**, the outer and inner boundaries of the fibers of Muller, preventing the appearance of continuous membranes, the outer lying between the outer nuclear layer and the layer of rods and cones, and the inner being next to the hyaloid membrane.—**Membrane of Bruch**, a structureless or finely fibrillated transparent membrane, lying between the choroid capillaries and the pigmented layer of the retina.—**Membrane of Corti**. Same as *tectorial membrane*.—**Membrane of Demours**, or *membrane of Descemet*, a transparent, glassy lamina, covering posteriorly the proper tissue of the cornea, itself lined with a single layer of epithelial cells. Also called *posterior elastic lamina*.—**Membrane of Henle**. Same as *Henleian membrane*.—**Membrane of Reissner**, the membrane which separates the scala vestibuli of the cochlea from the cochlear canal or scala media. It extends obliquely from the spiral lamina to the outer wall of the cochlea. It is a very delicate layer of connective tissue continuous with the periotium of the upper surface of the bony lamina, and lined with pavement epithelium on its lower side.—**Mucous membrane**, the general lining membrane of the alimentary canal and its annexes, including the respiratory and urogenital passages. It is one of the most extensive and the most complex of the membranes of the body, varying greatly in character in different cases, and in different parts of its own extent, and may include various special glandular structures, as mucous crypts, follicles, etc., as well as the appropriate nerves, blood vessels and lymphatics. Mucous membrane consists essentially of a basement membrane (see *basement*), which separates a free epithelium from a fibrovascular attached layer. The epithelium is a layer of cells of various kinds, as *squamous*, *columnar*, *cubical*, etc., the fibrovascular layer consists of connective tissue with vessels, lymphatics, nerves, and often muscular fibers. Embedded in this membrane may be also the glandular structures above mentioned, and the surface is often thrown up into various ridges, villi, and papillae. The structure is essentially a secreting one, giving rise to mucous as well as to various other special secretions. At the openings of the body the mucous membrane is directly continuous with the skin. The conjunctiva of the eye is also a mucous membrane.—**Nasmyth's membrane, the cuticula dentis, or cuticle of a tooth, the epithelial investment of the enamel of a young tooth, which persists for a while and then wears off.—**Nictitating membrane, the winking membrane or winker**, the third eyelid. It is very highly developed in some animals, as birds, in which it can be swept across the whole eye by means of appropriate muscles and tendons (see cut at *eye*), but in many others it is rudimentary or wanting. In essential character it is a fold of the conjunctival mucous membrane which when little developed, or when not in action, lies at the inner canthus of the eye.—**Obturator membrane**. (a) The membrane or ligament nearly closing the obturator foramen. (b) The occluding membrane of the fetal brain which closes the upper part of the fourth ventricle.—**Pituitary membrane, the mucous membrane of the nose**, the membrane lining the nasal passages, continuous with that of the pharynx, ear, eye and various sinuses of the skull. In a part of this membrane ramify the nerves of smell. Also called *Schneiderian membrane*.—**Pupillary membrane, a delicate transparent vascular membrane of the fetal eye which closes the pupil for a time, and divides the space in which the iris is suspended into two distinct chambers**. It is sometimes persistent, causing blindness.—**Schneiderian membrane, the pituitary membrane**, so called from the anatomist Schneider, who first showed the nasal mucus to be the product of this membrane, not of the brain, as had before been supposed.—**Semilunar membrane, in ornith.**, the membrane of the syrinx or lower larynx. It is a delicate, highly vibratile membrane, with a free concave upper margin ascending in the trachea from the pectus or cross bar of the syrinx, and constituting a part of the vocal organs, like a vocal cord of the larynx of a mammal.—**Serous membrane, a thin membrane of connective tissue, of mesoblastic origin, lined with a simple layer of flattened epithelial cells**. These cells are joined together along lines which are sometimes straight but usually sinuous or jagged. Between them here and there are openings (stomata) of lymphatic vessels. Membranes of this kind line certain cavities of the body, and are reflected over the contained viscera, forming in this way a shut sac, moistened with lymph and communicating with the lymphatic vessels through the stomata. The best examples of serous membranes are the pleurae, the pericardium, the peritoneum, and the tunica vaginalis.—**Subradular membrane, a membrane situated under the radula or lingual ribbon of the odontophore of a mollusk**.—**Synovial membrane, the membrane which lines the joints and serous cavities or synovial fluid, the glairy substance which lubricates the joint and facilitates its movements**. The membrane passes gradually into the articular cartilage. Such membranes consist chiefly of connective tissue with vessels and nerves, covered here and there with patches of epithelial cells.—**Tectorial membrane, in anat.**, a strong elastic membrane in the cochlear canal of the ear, lying above and parallel with the basilar membrane, extending outward from the limbus spiralis part way toward the outer wall of the cochlea, and covering the Cortian organ, upon the rods of which it rests. It is thin at its origin at the limbus spiralis, then thickens, and again tapers toward the free outer extremity. Also called *membrane of Corti*.—**Thyroid mem-****

brane, the fibrous membrane which connects the hyoid bone with the thyroid cartilage — **Tympanic membrane**, the membrane which occludes the external meatus of the ear and separates it from the middle ear — **Undulating membranes**, simple membranous bands, one margin attached, the other free, exhibiting undulatory motion. *Micrographic Diet* — **Vibratile membrane**, same as *semilunar membrane* — **Vitelline membrane**, the proper coat or wall of an ovum, including the vitellus or yolk. It corresponds to the cell wall of any other cell. Also called *zona pellucida*, from its pellucid appearance in some cases, as in the human ovum.

membrane-bone (mem'brān-bōn), *n.* An ossification in membrane of any kind, a bone which has any other origin than in cartilage. The bones of the skeleton of vertebrates are for the most part formed in cartilage, which is resorbed during the process of ossification, but some, as those of the face, of the top and sides of the skull, those found in tendons and other fibrous structures, as the bones of the eyeball, heart, penis, etc., of various animals, and all dermal bones, or those of the exoskeleton, are membrane bones.

membraneless (mem'brān-less), *a* [*< membrane + less*] Not provided with a membrane as, a *membraneless* cell.

membrana (mem-brā-nol'a), *n*, *pl* *membranae* (-ē) [NL, dim of *L. membrana*, membrane see *membrane*.] In *zool.*, same as *corium*, 2 (*v*).

membranaceous (mem-brā-nē-us), *a* [*< L. membranaceus*, of a membrane or parchment, *< L. membrana*, membrane see *membrane*] Same as *membranous*.

membrane-suture (mem'brān-sū'tūr), *n* In the hemelytrium of a heteropterous insect, the suture between the basal harder part or corium and the terminal part or membrane.

membrane-winged (mem'brān-wingd), *a* In *entom.*, hymenopterous.

membraniferous (mem-brā-nif'e-rus), *a* [*< L. membrana*, membrane, + *ferre* = *F. bear*] Having or producing membrane.

membraniform (mem'brā-ni-fōrm), *a* [*< L. membrana*, membrane, + *forma*, form] Having the characteristics of a membrane, membranous in form, lamellar, fascial.

membranocoriaceous (mem'brā-nō-kō-rī-ā-shus), *a* [*< L. membrana*, membrane, + *corium*, hide, + *-aceous* (*< coriaceous*)] Of a thick, tough, membranous texture or consistency, as a *polyron*.

membranology (mem-brā-nol'ō-jī), *n* [*< L. membrana*, membrane, + *logia*, *< λογία*, speak see *-ology*] The science of membranes, a treatise on membranes. [Rare.]

membranous (mem-brā-nō'sus), *n*, *pl.* *membranae* (-ā) [NL see *membrana*] A muscle of the thigh, the semimembranosus.

membranous (mem'bra-nus), *a* [= *F. membrana*, *< NL. membranaceus*, *< L. membrana*, membrane see *membrane*] 1 Having a membrane or membranes, membraniferous — 2 Consisting of membrane, having the texture or quality of a membrane, membranaceous — 3 Of or pertaining in any way to membrane, resembling membrane, membraniform — 4 In *bot.*, having the character or appearance of membrane, thin, rather soft and pliable, and often more or less translucent, as sometimes leaves, the walls of seed-vessels, the indusia in ferns, etc. See phrases below — **Membranous croup**, labyrinth, etc. See the nouns. **Membranous mycelium**, a mycelium in which the hyphae form a membranous layer by interweaving. See *mycelium* — **Membranous ossification**. See *membrane bone*.

membrule (mem'brā-nūl), *n* [= *F. membrula*, *< L. membrula*, dim of *membrana*, a membrane see *membrane*] 1 A little membrane — 2 In *entom.*, a small triangular flap or curved portion on the posterior part of the base of the wings, seen in certain dragon-flies.

membré (F' prōn mon-brā'), *a*. [*F.*, *< membre*, member see *member*] In *her.*, same as *membered*.

membrum (mem'brum), *n*, *pl.* *membra* (-brā) [*L.* see *member*] In *anat.*, a member technically distinguished from *truncus*.

Memecylea (mem-ē-sil'ē-ē), *n* *pl.* [NL. (A. P. de Candolle, 1824), *< Memecylon* + *-aea*.] A tribe of plants of the natural order *Melastomaceae*, characterized by having a definite number of ovules, and a fruit containing from 1 to 5 seeds, the latter with large embryos. It embraces 3 genera, of which *Memecylon* is the type, and about 155 species, natives of the tropics.

Memecylon (me-mes'ī-lon), *n* [NL. (Linnæus, 1767), *< L. mecyllon*, *< Gr. μεκυλλον, μεκυλλον*, *μεκυλλον*, the fruit of the arbutus or strawberry-tree] A genus of plants of the natural order *Melastomaceae*, and type of the tribe *Memecyleae*, characterized by having 8 anthers and a 1-celled ovary containing 1 seed. They are smooth trees or shrubs with entire coriaceous leaves, and axillary

clusters of small blue or white flowers. About 110 species have been described, natives of Asia, Africa, tropical Australia, and some of the islands in the Pacific.

memento (mē-men'to), *n* [= *F. memento*, a reminder, *< L. memento*, remember, 2d pers. sing. impv of *meminisse*, remember, a redupl. perf., *< V. men*, think see *mund*]. It should be noted that *memento* is not connected with *memory*, *remember*, etc.] A hint, suggestion, notice, or memorial to awaken memory, that which reminds; a reminder of what is past or of what is to come, specifically, a souvenir.

He is but a man, and seasonable mementos may be useful. Bacon.

Brother of death daily haunts us with dying mementos. Sir T. Browne, *Urn burial*, v.

At length she found herself decay, Death sent mementos every day. Cotton, *Fables*, v.

These [paralytic] speak a loud memento. Couper, *Task*, i 452.

= *Syn.* *Souvenir* etc. (see *memorial*), remembrance. **memento mori** (me-men'tō mō'rī), [*L.*, remember to die, i. e. that thou must die, usually translated, 'remember death'. *memento*, 2d pers. sing. impv of *meminisse*, remember (see *memento*), *mori*, die (see *mort*, *mort*)] A decorative object, usually an ornament for the person, containing emblems of death or of the passing away of life. common in the sixteenth century.

I make as good use of it as many a man doth of a Death's-head or a *memento mori*. Shak., *1 Hen. IV.*, iii 3 35.

memina (me-mī'nā), *n* [*Singalese*] 1 The peesoreh, a deerlet of Ceylon, *Tragulus memina*. Also *memina* — 2 [*cap*] [*NL.*] A genus of such small deer, separated from *Moschus* by J. E. Gray.

Memnonian (mem-nō'nī-an), *a*. [*< L. Memnonius*, *< Gr. Μηνωνιος, Μηνωνιος*, of Memnon, *< Μηνων*, *L. Memnon*, Memnon see *def*] Of, pertaining to, or resembling Memnon, an Oriental or Ethiopian hero in the Trojan war, slain by Achilles. He was a solar hero, son of the Dawn (Eos), or of Day (Hemera), symbolized as a youth of marvellous beauty and strength. The Greeks gave his name to one of the colossi of Amenophis III at Thebes in Egypt, the vocal Memnon, and called one of the temples there the Memnonium or temple of Memnon. See *Memnonium*.

XXIX, the liberty of Greece to yoke From Susa, his Memnonian palace high. Milton, *P. L.*, x 308.

Memnonium (mem-nō'nī-um), *n*, *pl.* *Memnonia* (-ī) [*< Gr. Μηνωνιον*, a temple of Memnon, neut of *Μηνωνιος*, of Memnon, *< Μηνων*, Memnon] 1 A temple of Memnon. The name was given by the Greeks to an ancient temple at Susa in Persia, and also to the temple still so called at Thebes in Egypt, properly the Ramesseum or temple of Rameses II. See *Memnonian*.

And thou hast walked about (how strange a story!) In Thebes's streets three thousand years ago, When the Memnonium was in all its glory. II Smith, *Address to the Mummy at Belzoni's Exhibition*.

2. [*F* or *cap*] The ancient Greek name for the settlement or suburb adjoining the cemetery of an Egyptian city, consisting of extensive establishments for the mummification of the dead, and of the dwellings of the numerous artisans employed in these establishments and in the various professions, arts, and trades connected therewith. Also *memnonium*.

Here stood, where the field of the colossi is now, the Memnonium. C. O. Müller, *Manual of Archaeol.* (trans.), § 218.

memoir (mem'wōr or mē'mōr), *n* [*< F. mémoir*, memoir, *< L. memoria*, memory see *memory*] 1 A note of something to be remembered, a memorandum.

He desired a *Memoir* of me, which I gave him, of what I would have him search for in the King's Cabinet, and promised me all the Satisfaction he could give me in that Affair. Lister, *Journey to Paris*, p. 87.

There is not in any author a computation of the revenues of the Roman empire, and hardly any *memoirs* from whence it might be collected. Arbuthnot, *Arithmetical*.

2. A notice or an essay relating to something within the writer's own memory or knowledge, a record of facts upon a subject personally known or investigated, a concise account of one's knowledge or information on any topic, especially, a communication to a society containing such information as the *Memoirs* of the Academy of Sciences — 3. *pl.* A narrative of the facts or events of some phase of history or in the life of a person, written from personal knowledge or observation; a history or narrative dwelling chiefly upon points about which the writer is specially informed, as an autobiography or a continuous record of observations.

Such narratives are generally limited to a special line of facts or series of events, as Guizot's *Mémoires pour servir à l'histoire de mon temps*, 'Memoirs to serve for the History of my Time'.

He told me he had studied the History of Books with the utmost application 18 years, and had brought his *Mémoires* into a good Method.

Lister, *Journey to Paris*, p. 100.

To write his own *Mémoires*, and leave his Heirs High Schemes of Government, and Plans of Wars. Prior, *Carmen Seculare*, st. 33.

4. In a restricted use, a biography, a memorial volume or work containing notices of the life and character of some one deceased, with extracts from his (or her) correspondence, etc. — *Syn.* 4. *Biography*, *Memoir*. See *biography*. **memoiret**, *n*. A Middle English form of *memory*.

mémôire (mā-mwōr'), *n*. [*F.*: see *memoir*] In *diplomacy*, same as *memorandum*, 4.

memoirism (mem'wōr-izim), *n* [*< memoir* + *-ism*] The act or art of writing memoirs.

Reducing that same *memoirism* of the eighteenth century into history. Carlyle, *Misc.*, ii 242 (Davies).

memoirist (mem'wōr-ist), *n* [*< memoir* + *-ist*. Cf. *memorist*] A writer of memoirs, a biographer.

Sir William Temple, the lively, agreeable, and well informed essayist and *memoirist*.

Craik, *Hist. Eng. Lit.*, ii 185.

'Carlo was beginning to swear "fit to raise the dead," writes the *memoirist*, at the tardiness of the Norman pair. G. W. Cable, *Stories of Louisiana*, ii.

memorabilia (mem'ō-ra-bil'i-ā), *n* *pl.* [*L.*, neut. pl of *memorabilis*, worthy to be remembered or noted see *memorable*.] 1 Things remarkable and worthy of remembrance or record.

All the *memorabilia* of the wonderful childhood. Bushnell, *Sermons on Living Subjects*, p. 28.

2. Things that serve to recall something to memory, things associated with some person, place, or thing that is held in remembrance.

memorability (mem'ō-ra-bil'i-ti), *n* [*< memorable* see *-bility*] Memorableness. [Rare.]

Many events of local *memorability*. Southey, *The Doctor*, xlvii (Davies).

memorable (mem'ō-ra-bl), *a* and *n* [= *F. mémorable* = *Sp. memorable* = *Pg. memoravel* = *It. memorabile*, *< L. memorabilis*, worthy to be remembered or noted, remarkable, *< memorare*, bring to remembrance, mention see *memorare*] 1. *a* 1. Worthy to be remembered, such as to be remembered, not to be forgotten, notable, remarkable as, the *memorable* names of history, *memorable* deeds, a *memorable* disaster.

I passed through part of that forest, which is called Fontaine Belean forest, which is very great and *memorable* for exceeding abundance of great massy stones. Coryat, *Cruities*, i 34 (sig. E).

Witness our too much *memorable* shame When Cressy battle fatally was struck. Shak., *Hen. V.*, ii 4 58.

Neither the praise of his wisdom or his virtue hath left him *memorable* to posterity. Milton, *Prelatical Episcopacy*.

On this *memorable* day (that of the battle of the Boyne) he was seen wherever the peril was greatest. Macaulay, *Hist. Eng.*, xvi.

2. Keeping in remembrance, commemorative.

I wear it [the leek] for a *memorable* honour, For I am Welsh, you know, good countryman. Shak., *Hen. V.*, iv 7 100.

= *Syn.* 1. Signal, extraordinary, famous.

It is a *memorable* event worthy of being kept in memory, a noteworthy or remarkable thing.

He that will be thoroughly acquainted with the principal antiquities and *memorabilia* of this famous city, let him read a Latin Tract of one Symphorianus (anapagrus). Coryat, *Cruities*, i 74.

memorandum (mem'ō-ran'dum), *n*; *pl.* *memoranda* (-dā), less commonly *memorandums* (-dums) [= *F. memorandum*, *< L. memorandum*, neut. of *memorandus*, to be remembered, gerundive of *memorare*, bring to remembrance: see *memorate*.] 1. Something to be remembered used, originally as mere Latin, and usually abbreviated *mem.*, to introduce a note of a thing to be done. Hence — 2. A note to

help the memory; a record of something for future reference or consideration.

And over against this memorandum (of the King's own hand), "Otherwise satisfied"

Bacon, Hist. Henry VII, p. 212.

Stings, conscious stings, have made my heart their butt, Graving outrageous Memorandums there Of those snakes tongues which Aphrodisias shot Into my heedless breast J. Beaumont, Psychoe, II 147

I have never seen any work from nature of Millet's that was not memorandum-like in character, indicating by outline and shadow the principal contour

The Century, XXXVIII 97

Specifically—3. In law, a writing in which the terms of a transaction or some part of them are embodied. The statute of frauds requires a note or memorandum in writing to make a valid sale in certain cases, and under this statute a letter may be a sufficient memorandum. The term is often used in the caption memorandum of agreement, with which formal contracts are begun.

4. In diplomacy, a summary of the state of a question, or a justification of a decision agreed on. Also (as French) *mémoire*—Memorandum articles, in marine insurance, things referred to in the memorandum clause annexed to some policies, exempting the insurers from liability for the articles therein specified—Memorandum check, a bank check with "memorandum" or "mem" on the face of it. The legal effects of such an addition to the face of a check are that the drawer is liable upon it absolutely to the one to whom he gives it, and will not be exonerated by delay or omission to present it at the bank, and, on the other hand, it is not, like an ordinary check, a representation that the drawer has any funds in the bank. But the bank may pay it like any other check if presented. The object of a memorandum check is to serve as a formal due bill, usually with an understanding between the parties as to the desired delay in presentation for the convenience of the drawer, or that it shall never be presented at the bank, but to the drawer at a future time.—Memorandum of association, in Eng. law, a document signed by share holders, stating the name, object, etc., of a joint-stock company, upon the registration of which the company has a legal existence. It corresponds to the articles of association in the American law of corporations.—Memorandum sale, the sending of goods by an intending seller to a proposing buyer, subject to the approval of the latter, the title remaining in the seller until the buyer indicates his approval or acceptance of the goods. R. Miller, Law of Conditional Sales.—Syn. 2 Souvenir, Memento, etc. See memento.

6 *t* *Eccles* See *commemoration*, 2 (*b*) = Syn 1 *Memorial*, *Monument*, *Memento*, *Souvenir*, and *Memorandum* agree in meaning that which puts one in mind or helps one to remember all but *memorandum* are especially means of keeping a revered or endeared person, place, etc., in memory. A *memorandum* is simply a note made in order to prevent the forgetting of something important, especially something which might easily slip from the mind. *Memento* and *souvenir* differ very slightly, *souvenir* being a somewhat more elevated word. We give a book or a lock of hair as a *memento*, we prize a faded flower as a *souvenir* of a visit to Mount Vernon with friends now separated from us. *Memorial* and *monument* are some times the same as, the Martyrs' *Memorial* at Oxford is essentially a *monument*. A *monument* is often a single shaft or column, as the Washington *monument*, a *memorial* may be a commemorative structure, an illuminated window, a book, etc.

A noble storie,
And worthy for to drawen to *memorie*
Chaucer, Prologue to Miller's Tale, l. 4

—Syn. 1-4 *Memory*, *Recollection*, *Remembrance*, *Reminiscence*. *Memory* is the general word for the faculty or ca-
pacity itself, *recollection* and *remembrance* are different
kinds of exercise of the faculty, *reminiscence*, also, is used
for the exercise of the faculty but less commonly, and then
it stands for the least energetic use of it, the matter seem-
ing rather to be suggested to the mind. The correctness
of the use of *memory* for that which is remembered has
been disputed. The others are freely used for that which
is remembered. In either sense *recollection* implies more
effort, more detail, and more union of objects in wholes,
than *remembrance*. *Reminiscence* is used chiefly of past
events, rarely of thoughts, words, or scenes, while *recollec-
tion* is peculiarly appropriate for the act of recalling men-
tal operations. See *remember*

menicorn, *n.* See *mangcorn*

menigite (men-'jit), *n.* [After *Mengo*, the discoverer] A black mineral occurring in small crystals in granite veins in the Ilmen moun-

tains, Urals. Its exact nature is doubtful; it may be identical with columbite

meniglet, *v.* and *n.* An obsolete form of *minglet*.

menhaden (men-hā'dn), *n.* [Also *manhaden*, a corruption of Narragansett Indian *munnaw-hattang* (Roger Williams), lit 'fertilizer,' a name applied to the menhaden, herring, and alewife, all being used by the Indians for manuring their corn-fields] A clupeoid fish, *Brevoortia tyrannus*. It has the appearance of a shad, but is still more compressed, has a large head, and the scales are closely imbricated, leaving a high narrow surface exposed, while their posterior margins are pectinated. The jaws and mouth are toothless and there is a deep median emargination of the upper jaw. The intestinal canal is very long, and the chief food is obtained from mud taken into the stomach. It is one of the most important economic fishes of the eastern coast of the United States; it ranges from 25 to 45 north latitude, and in the summer occurs in the coast-waters of all the Atlantic States from Maine to Florida but in winter only south of Cape Hatteras. It is the most abundant fish on the eastern coast of the United States. Formerly it was used almost solely for manure, but large quantities are now converted into oil, and many are canned in oil, to be sold as 'sardines,' like the European fishes so named. It attains a length of from 12 to 16 inches, is bluish above with silvery or brassy sides, the fins usually tinged yellowish or greenish, and has a dark scapular blotch often with smaller spots behind it. It varies a good deal in details of form and color with age, and to some extent with season and locality. This fish has at least 80 different popular names in the United States, the leading ones being *mossbunker*, with many variants (see *mossbunker*), *poyle* or *poppy* and its variants, *clewse* or *old-wife*, *whiting* or *whitefish*, *bony fish*, *bugfish* (which see), *hardhead*, *fatback*, *chebug*, *pilehard* (a misnomer), *scholody*, *shiner*, *paruhagen* (*paghaden*, *poakagan*, etc.), *yellowtail*, *green tailed shad*, *shadine* (as put up in oil), and *sardine*. The name *menhaden* extends in literary use to all the other species of *Brevoortia*, of which there are several, as *B. patronus* of the Gulf of Mexico, and it is locally misapplied to the thread herring, *Opisthonema thersa*. See out under *Brevoortia*

menhir (men-'hir), *n.* [*< Corn. maenhir, < Corn. and W. maen, a stone (cf. dolmen, cistvaen), + hir, long Cf. longstone*] In *archæol.* one of a class of monumental stones of greater or less antiquity, found in various parts of Europe,

Group of Menhirs at Carnac, Brittany

also in Africa and in regions of Asia, especially in the Khassian hills. They are very abundant in Brittany, France. They are usually tall and massive, either entirely rough or partly cut, and are set upright in or on the ground, either singly or in groups, alignments, circles, or other combinations. See *megoliths*

All can trace back the history of the *menhirs* from historic Christian times to non historic regions, when these rude stone pillars, with or without still rudier inscriptions, were gradually superseding the earthen tumuli as a record of the dead *Fryxson, Rude Stone Monuments, p 60*

menial (mē'nī-al), *a.* and *n.* [Early mod. *AF. menyall*, *< ME. menial, meynal, < OF. (AF) menial, menial, meynal*, pertaining to a household, *< meynier, mannee*, etc., a household see *meiny*] 1. *a.* 1 Belonging to a retinue or train of servants, serving

Macaulay, Warren Hastings.

II. n. A domestic servant, one of a body of household servants now used chiefly as a term of disparagement

That all might mark — knight, *menial*, high, and low
Couper, Hope, l 312.

Hired servants are of three kinds *mentals*, day laborers, and agents. A *menial* is one who dwells in the household of the master, and is employed about domestic concerns, under a contract, express or implied, to continue service for a certain time *Robinson, Elem. of Law, 123.*

menialty (mē'nī-al-ti), *n.* [*< menial + -ty. Cf. menalty*] Common people collectively

The vulgar *menialty* conclude therefore it is like to in crease, because a harnshaw (a whole afternoon together) sat on the top of Saint Peter's church in Cornhill
Nash, Christ's Tears over Jerusalem (1618). (Nares.)

Menidae (men-i-dē), *n* pl [NL., < *Menos* + *-idae*] A family of scombroidean acanthopterygian fishes, typified by the genus *Menes*. The body is much compressed and the abdomen prominent and trenchant, the mouth very protractile, the dorsal very long and entire, the anal also very long and commencing just behind the ventrals, and the ventrals elongated and complete. *Mene maculata* is an inhabitant of the Indian Ocean.

menilite (men-i-lit), *n* [*< Ménili(montant) (see def.) + -ite*] A variety or subspecies of opaline silica found at Ménilmontant, a quarter in the eastern part of Paris. It is found in kidney-shaped masses of the size of the hand or larger, sometimes in globules of the size of a nut. It has usually a dull grayish or bluish color.

meningeal (mē-nin'jē-āl), *a* [*< meninx, pl. meninges, + -al*] Of or pertaining to the meninges. — **Meningeal arteries**, the arteries supplying the dura mater of the brain, the principal one being the middle or great meningeal from the internal maxillary

meninges, *n* Plural of *meninx*.

meningitic (men-in-jit'ik), *a* [*< meningitis + -ic*] Relating or pertaining to meningitis, affected with meningitis.

meningitis (men-in-jit'is), *n* [NL., < Gr. *μηνιγίτις* (*μηνίγξ*), a membrane (see *meninx*), + *-itis*] Inflammation of the membranes of the brain or spinal cord. — **Epidemic cerebrospinal meningitis**, an infectious disease which in ordinary cases is characterized by an acute invasion with violent headache, severe pains and stiffness in the neck, and great malaise, more or less fever, sometimes a chill, and sometimes vomiting. The subsequent course varies greatly, but usually presents severe headache and backache and retraction of the head, tenderness along the spine, often vertigo, stupor, frequently delirium, sometimes convulsions, sometimes vomiting, with paralysis of the ocular and facial muscles or abnormal stimulation of the same. The spinal nerves exhibit more or less disturbance, herpes facialis is frequent, and other skin affections, such as petechiae, roseola, and urticaria. The spleen may be slightly but is not greatly enlarged. The disease lasts from two to four weeks in many cases, but it may be fatal in a few days, or a severe invasion may be followed by equally speedy recovery, on the other hand, it may last for eight weeks or more. It is most frequent in children, but adults are not exempt. The infection inheres in localities, proximity to or contact with the sick does not seem to increase exposure. Anatomically, the disease presents a purulent leptomeningitis of the cerebrospinal axis. Also called *black death*, *black fever*, *cerebrospinal fever*, *congestive fever*, *malignant meningitis*, *malignant purpura*, *malignant purpuric fever*, *neuromeningitis*, *purpura meningitis*, *purpura meningitis*, *purpura meningitis*, *typhoid meningitis*, *typhus meningitis*, *typhus meningitis*, *typhus meningitis*. — **Tubercular meningitis**. See *tubercular*.

meningocele (mē-nin'gō-sēl), *n*. [*< Gr. μηνιγίς* (*μηνίγξ*), a membrane, + *κῆλη*, a tumor] In *pathol.*, hernia of the meninges or cranial membranes, cerebral hernia confined to the meninges.

meningococcus (mē-nin'gō-kōk-us), *n* [NL., < Gr. *μηνιγίς* (*μηνίγξ*), a membrane, + *κόκκος*, a kernel] A coccus supposed to be the cause of cerebrospinal fever.

meningorachidian, meningorachidian (mē-nin'gō-rā-kid'i-an), *a* [*< Gr. μηνιγίς* (*μηνίγξ*), a membrane, + *ράχις* (*ραχίς*), the spine] Pertaining to the meninges or membranes of the spinal cord and to the rachis or spine. *as*, the *meningorachidian* veins. See *spinal*.

meninguria (men-ing-gū'ri-ā), *n*. [NL., < Gr. *μηνιγίς* (*μηνίγξ*), a membrane, + *ούρον*, urine] Urine containing membranous shreds.

meninting (mē-nin'ting), *n* [Japanese] A three-toed kingfisher, (*eyz meninting*).

meninx (mē-nin'ks), *n*, pl *meninges* (mē-nin'jēs) [NL., < Gr. *μηνιγίς* (*μηνίγξ*), a membrane, esp. of the brain] In *anat.*, a membrane; especially, one of the three membranes that invest the brain and spinal cord. They are the dura mater, the arachnoid, and the pia mater, named in order from without inward. See these words.

meniscal (mē-nis'kal), *a* [*< meniscus + -al*] Pertaining to or having the form of a meniscus.

meniscate (mē-nis'kāt), *a* [*< meniscus + -ate*] Resembling the section of a meniscus: applied in botany to a cylindrical body bent into a semicircle.

menisciform (mē-nis'fōrm), *a* [*< Gr. μηνίσκος*, a crescent (see *meniscus*), + *L. forma*, form] Of the form of a meniscus or crescent.

meniscoid (mē-nis'koid), *a* [*< Gr. μηνίσκος*, a crescent, + *ειδος*, form] Like a meniscus, crescent-shaped; concavo-convex.

meniscoidal (men-is-koi'dal), *a*. [*< meniscoid + -al*] Same as *meniscoid*.

meniscus (mē-nis'kus), *n*, pl *menisci* (i) [*< NL. meniscus, < Gr. μηνίσκος*, a crescent, dim of *μήν*, the moon, see *moon*] 1 A crescent or crescent-shaped body. Specifically — 2 A lens, convex on one side and concave on the other, and thicker in the center, so that its section presents the appearance of the moon in

its first quarter. As the convexity exceeds the concavity, a meniscus may be regarded as a convex lens (also called a *converging meniscus*), the corresponding form in which the convexity is less than the concavity is sometimes but improperly called a *diverging meniscus*. See *cut under lens*.

3. The convex or concave surface of a liquid, caused by capillarity, thus, the mercury in a barometer has a *convex meniscus*, but spirit or water a *concave meniscus*. — 4 In *anat.*, an interarticular fibrocartilage, of a rounded, oval, disk-like, or falcate shape, situated between the ends of bones, in the interior of joints, attached by the margins. Such cartilages are found in man in the temporomaxillary, the sternoclavicular, and sometimes the acromioclavicular articulations, and in the wrist and knee joints.

Forms of Meniscus def 3

Menispermaceae (men-i-spēr-mā'sē-ē), *n* pl [NL. (A. P. de Candolle, 1824), < *Menispermum* + *-aceae*] A natural order of dicotyledonous polypetalous plants, of which the genus *Menispermum* is the type, belonging to the cohort *Ranales*. It is characterized by small, usually three-parted, dious flowers, with the petals shorter than the sepals, and solitary seeds, which are attached by the ventral face, and have the micropyle above. The order embraces about 57 genera and 350 species, the number of which may, however, be greatly reduced, they are found principally within the tropics, although a few occur in North America, western Asia, and Australia. They are principally woody climbers, with alternate leaves and clusters of small flowers. The plants possess active narcotic and bitter properties, some being very poisonous, while others are used as tonics. It includes 4 tribes, the *Tropaneae*, *Cocculae*, *Cuscutaceae*, and *Pachygonae*.

menispermaceous (men-i-spēr-mā'shi-us), *a* [*< Menispermum + -ic*] Relating to the *Menispermaceae*, or to the larger group to which that order belongs.

menispermate (men-i-spēr-māt), *n* [*< menisperm + -ate*] A compound of menispermic acid and a base.

menispermic (men-i-spēr'mik), *a*. [*< menisperm + -ic*] Obtained from the seeds of the menispermaceous plant *Anamirta Cocculus* applied to an acid.

menispermine (men-i-spēr'min), *n* [*< menispermum + -ine*] An alkaloid extracted from the shells of the fruit of *Anamirta Cocculus*. It is tasteless and medicinally inert. See *Cocculus*.

Menispermum (men-i-spēr'mum), *n* [NL. (Tournefort, 1705), so called from the half-moon shape of the seeds, < Gr. *μήν*, the moon, + *σπέρμα*, a seed.] A genus of dicotyledonous polypetalous plants, type of the natural order *Menispermaceae*, the moonseed family, and belonging to the tribe *Cocculae*, characterized by having the embryo horseshoe-

shaped, and by having from twelve to an indefinite number of stamens. They are climbing plants, with partially petiole, palmately lobed or angled leaves, flowers in panicles, and the fruit a compressed drupe. There are 2 species — *M. Canadense*, the Canadian moonseed, native of North America, and *M. Dauricum*, indigenous to the temperate parts of eastern Asia. The former is a desirable arbor-vine, though its flowers are in conspicuous. Its fruit is black with a bloom, resembling small grapes.

2 [*i. e.*] The pharmacopoeial name of the rhizome and rootlets of *Menispermum Canadense*. It is little used in medicine, and seems inert. Also called *Texas sarsaparilla*.

menivert, *n*. An obsolete form of *minver*.

mennard (men'ard), *n*. [See *minnow*] A minnow [Prov. Eng.]

mennawet, *n*. An obsolete form of *minnow*.

Mennonist (men'on-ist), *n* [*< Mennonite + -ist*] Same as *Mennonite*.

Mennonite (men'on-it), *n* [*< Menno (see def.) + -ite*] A member of a Christian denomination which originated in Friesland in the early part of the sixteenth century, and holds doctrines of which Menno Simons (1492-1559) was the chief exponent. The leading features of the Mennonite bodies have been baptism on profession of faith, refusal of oaths, of civic offices, and of the support of the state in war, and a tendency to asceticism. Many of these beliefs and practices have been modified. The sect became divided in the seventeenth century into the 'Up-land' ('Obere') Mennonites or Ammanites and the 'Low-land' ('Untere') Mennonites, the former being the more conservative and rigorous. Members of the sect are found in the Netherlands, Germany, Russia, etc., and especially in the United States. In the last named country they are divided into 'Untere' or Old Mennonites, 'Obere' Mennonites or Ammanites, New Mennonites, Evangelical Mennonites, and Reformed Mennonites (or Herrians).

mennowt, *n*. An obsolete form of *minnow*.

menobranch (men'ō-brang'k), *n*. An animal of the genus *Menobranchius*.

Menobranchidae (men-ō-brang'kī-dē), *n* pl [NL., < *Menobranchius* + *-idae*] A family of amphibians named from the genus *Menobranchius* same as *Proteidae*.

Menobranchius (men-ō-brang'kus), *n* [NL., < Gr. *μήν*, remain (see *remain*), + *βράχια*, gills]

1. A genus of tailed amphibians of the family *Proteidae*, characterized by the persistence of

Menobranchius or Necturus maculatus

the gills and the possession of four limbs with four well-developed digits. It is the American representative of the Old World genus *Proteus*. *M. maculatus* inhabits the waters of the Mississippi basin and of the Great Lakes, while *M. punctatus* is found in those of the south Atlantic watershed. The genus is also called *Necturus*.

2. [*i. e.*] An animal of this genus.

Menocerca (men-ō-sēr'kē), *n* pl [NL., < Gr. *μήν*, remain, + *κέρκος*, a tail] A series of Old World catarrhine simians, from which the tailless apes (*Anthropoidea*) and man are by some supposed to be derived, as well as the existing tailed monkeys and baboons. *Haeckel*.

Menopoma (men-ō-pō'mā), *n.* [NL, so called with ref. to its permanent gill-openings; < Gr. *μήν*, remain, + *πῶμα*, a lid.] A genus of large tailed amphibians, typical of the family *Menopomatidae*, so called from the persistence of the gill-slits or branchial apertures. The genus is peculiar to America, where it represents the so called "giant salamander" of Japan (*Cryptobranchus*, or *Seboldia*, or *Megalobatrachus maximus*). There are two species of these large, ugly, and repulsive creatures, *M. alleghaniensis* and *M. horrida*. They have four short but well formed limbs, the fore feet four toed and the hind feet five toed. They attain a length of one or two feet, and live in muddy waters of the Alleghany region and Mississippi basin. They are voracious, may readily be taken with hook and line, and are very tenacious of life. They are the largest amphibians of America, and are wrongly reputed to be poisonous. They are popularly known by the names of *hellbender*, *mud-dog*, *water puppy*, *water dog*, *ground puppy*, and *toogee*. The genus is also called *Protonotus*, its two species being then known as *P. fusca* and *P. horrida*. See cut under *hellbender*.

2. In *musu*, noting that style of music which succeeded the earliest plain-song, and was distinguished from it by such a combination of simultaneous but independent voice-parts that a system of rhythm was necessitated to avoid confusion. It involved both a classification of rhythms and the invention of a notation to represent rhythmic values. Two principal rhythms were recognized: *tempus perfectum*, which was triple (called 'perfect' for fanciful theological reasons), and *tempus imperfectum*, which was duple. The system of notation included notes and rests called *larve*, *maxima*, *long*, *breve*, *semibreve*, *minim*, *semiminima*, *fusa*, and *minifusa* (*fuella*), of which in general each note was equal in duration to either three or two of the next denomination, according to the *tempus* used (See the various words.) The working out of the system was highly complicated, but it prepared the way for the medieval study of counterpoint and for the invention of an adequate notation, and thus contributed directly to the progress of musical art.
